Superconductivity Experiments In A New Technology:

New Challenges in Superconductivity: Experimental Advances and Emerging Theories J. Ashkenazi, Mikhail V. Eremin, Joshua L. Cohn, Ilya Eremin, Dirk Manske, Davor Pavuna, Fulin Zuo, 2006-01-24 This volume contains the proceedings of the 2004 University of Miami Workshop on Unconventional Superconductivity The workshop was the fourth in a series of successful meetings on High T Superconductivity and C related topics which took place at the James L Knight Physics Building on the University of Miami campus in Coral Gables Florida in January 1991 1995 1999 and 2004 The workshop consisted of two consecutive events 1 NATO Advanced Research Workshop ARW on New Challenges in Superconductivity Experimental Advances and Emerging Theories held on January 11 14 2004 2 Symposium on Emerging Mechanisms for High Temperature Superconductivity SEMHTS held on January 15 16 2004 It is hard to write a balanced preface to a volume like this one yet at least we try to offer the reader a taste of what was happening in this workshop There were close to a hundred scientists from around the world albeit fewer Russians than we had originally hoped for Nevertheless the workshop was very lively and we trust that this is demonstrated in this volume The workshop included high quality presentations on state of the art works yet a key issue discussed by many was how homogeneous the cuprates are STM data as well as other reports showed that the cuprate superconductors SC s studied were inhomogeneous especially in the underdoped regime while experiments like ARPES and magnetoresistance have established the existence of a Fermi Surface FS at least above some doping level in the cuprates

New Topics in Superconductivity Research Barry P. Martins, 2006 Superconductivity is the ability of certain materials to conduct electrical current with no resistance and extremely low losses High temperature superconductors such as $\text{La}_{2-x}\text{Sr}_x\text{CuO}_x$ T_c 40K and $\text{YBa}_2\text{Cu}_3\text{O}_{7-x}$ T_c 90K were discovered in 1987 and have been actively studied since In spite of an intense world wide research effort during this time a complete understanding of the copper oxide cuprate materials is still lacking Many fundamental questions are unanswered particularly the mechanism by which high T_c superconductivity occurs More broadly the cuprates are in a class of solids with strong electron electron interactions An understanding of such strongly correlated solids is perhaps the major unsolved problem of condensed matter physics with over ten thousand researchers working on this topic High T_c superconductors also have significant potential for applications in technologies ranging from electric power generation and transmission to digital electronics This ability to carry large amounts of current can be applied to electric power devices such as motors and generators and to electricity transmission in power lines For example superconductors can carry as much as 100 times the amount of electricity of ordinary copper or aluminium wires of the same size Many universities research institutes and companies are working to develop high T_c superconductivity applications and considerable progress has been made This volume brings together new leading edge research in the field

New Technologies for Supercolliders L. Cifarelli, Thomas Ypsilantis, 2012-12-06 The present volume is based on the proceedings of the 12th Workshop of the INFN ELOISATRON Project held at the Ettore Majorana

Centre for Scientific Culture EMCSC Erice frapani Sicily Italy in the period September 15 20 1990 The proceedings deal with the presentation of New Technologies for Supercolliders Three new energy frontiers 16 40 and 200 TeV are now opened up for the future of Subnuclear Physics Basic problems above the Fermi energy are crowding up but no one knows the energy levels needed for their solution This is why the technology for experiments with the new generation of Supercolliders needs to be pursued having in mind the problems which are of common interest in the three energy frontiers The primary purpose of the Workshop was to contribute towards the highest energy limit in the search for new instruments and new technologies Furthermore the present status and performances of various detector technologies were reviewed The possible options for a powerful apparatus whose goal would be the discovery of the top Higgs and SUSY particles in a very high energy high rate environment were finally analysed The Workshop was sponsored by the Italian National Institute for Nuclear Physics INFN the Italian Ministry of Education the Italian Ministry of Scientific and Technological Research and the Sicilian Regional Government We are thankful to the staff of EMCSC for their efficient and warm support
