tailor made molecules and indicated what kind of compounds could be prepared in the near future In several evening and weekend sessions some participants presented summaries of their recent work and these and other new results were discussed A draft of these discussions could not be added in printed form because of the limitations set by the total page number of this volume but to give at least an idea of the problems touched upon during these sessions a list of the main contributors together with the title of the contribution discussed is given as an appendix The reader might contact these authors directly if interested in special recent results I hope that the participants have profited from the meeting and furthermore that at least some of the readers of the following papers are stimulated to high dimensional cooperative efforts on low dimensional conductive solids Primarily I have to thank NATO who made this project possible through generous financial support Especially I would like to mention gratefully the excellent cooperation with Dr T Kester of the NATO Scientific Affairs Division whose personal efforts helped in the preparation and organization of the meeting The Advanced Study Institute could not have taken place without the efforts of Mrs

New Developments in Quantum Field Theory and Statistical Mechanics Cargèse 1976 M. Levy, 2013-06-29

The 1976 Cargèse Summer Institute was devoted to the study of certain exciting developments in quantum field theory and critical phenomena Its genesis occurred in 1974 as an outgrowth of many scientific discussions amongst the undersigned who decided to form a scientific committee for the organization of the school On the one hand various workers in quantum field theory were continuing to make startling progress in different directions On the other hand many new problems were arising from these various domains Thus we felt that 1976 might be an appropriate occasion both to review recent developments and to encourage interactions between researchers from different backgrounds working on a common set of unsolved problems An important aspect of the school as it took place was the participation of and stimulating interaction between such a broad spectrum of theorists The central topics of the school were

chosen from the areas of solitons phase transitions critical behavior the renormalization group gauge fields and the analysis of nonrenormalizable field theories A noteworthy feature of these topics is the interpenetration of ideas from quantum field theory and statistical mechanics whose inherent unity is seen in the functional integral formulation of quantum field theory The actual lectures were partly in the form of tutorials designed to familiarize the participants with recent progress on the main topics of the school Others were in the form of more specialized seminars reporting on recent research

Electron-Phonon Interactions and Phase Transitions T. Riste, 2013-03-09 This NATO Advanced Study Institute was the fourth in a series devoted to the subject of phase transitions and instabilities with particular attention to structural phase transformations Beginning with the first Geilo institute in 1971 we have seen the emphasis evolve from the simple quasiharmonic soft mode description within the Landau theory through the unexpected spectral structure represented by the central peak 1973 to such subjects as melting turbulence and hydrodynamic instabilities 1975 Sophisticated theoretical techniques such as scaling laws and renormalization group theory developed over the same period have brought to this wide range of subjects a pleasing unity These institutes have been instrumental in placing structural transformations clearly in the mainstream of statistical physics and critical phenomena The present Geilo institute retains some of the counter cultural flavour of the first one by insisting whenever possible upon peeking under the skirts of even the most successful phenomenology to catch a glimpse of the underlying microscopic processes Of course the soft mode remains a useful concept but the major emphasis of this institute is the microscopic cause of the mode softening The discussions given here illustrate that for certain important classes of solids the cause lies in the electron phonon interaction Three major types of structural transitions are considered In the case of metals and semimetals the electron phonon interaction relies heavily on the topology of the Fermi surface

Electrons in Finite and Infinite Structures P. Phariseau, 2013-06-29 This book contains the transcripts of the lectures presented at the NATO Advanced Study Institute on Electrons in Finite and Infinite Structures held at the State University of Ghent Belgium August 30 September 11 1976 Over the last few years substantial progress has been made in the description and the understanding of the behavior of electrons in extended bodies This includes the study of the energy spectrum of electrons in large molecules perfect as well as imperfect crystals and disordered alloys Not only local potential techniques but also the many body aspects are discussed in detail As atomic molecular and solid state physics involve common techniques and insights we believe that physicists and chemists active in these fields have benefited from these lectures and the interchange of ideas during the course The aim of the Institute was to familiarize young scientists in the field with the current state of the art and to indicate in which areas advances may be expected in the near future The ASI consisted of two parts detailed instructional and review lectures over the whole period and some evening sessions where the participants were offered the opportunity to present their own work and discuss their ideas with senior scientists Since the Institute took place a few weeks after Prof Dr John C Slater was suddenly taken from our scientific community it was a

great honor for us to dedicate this course on behalf of the organizing committee to the late John C Slater

Material Characterization Using Ion Beams J. Thomas, 2012-12-06 The extensive use of low energy accelerators in non nuclear physics has now reached the stage where these activities are recognized as a natural field of investigation Many other areas in physics and chemistry have undergone similarly spectacular development beam foil spectroscopy in atomic physics studies in atomic collisions materials implantation defects creation nuclear microanalysis and so on Now this most recent activity by itself and in its evident connection with the others has brought a new impetus to both the fundamental and the applied aspects of materials science A summer school on Material Characterization Using Ion Beams has resulted from these developments and the realization that the use of ion beams is not restricted to accelerators but covers a wide energy range in the developing technology The idea of the ion beam as a common denominator of many activities dealing with surface and near surface characterization was enthusiastically received by many scientists and a school on this subject received the positive endorsement of NATO The Advanced Study Institute on Materials Science has assumed for us the status of an institution leading to better contact among the many laboratories engaged in this field The fourth Institute in this series was held in Aleria Corsica between August 22 and September 12 1976

Superconductor Materials Science: Metallurgy, Fabrication, and Applications Simon Foner, Brian B. Schwartz, 2012-12-06 This book encompasses the science measurement fabrication and use of superconducting materials in large scale and small scale technologies The present book is in some sense a continuation and completion of a series of two earlier books based on NATO Advanced Study Institutes held over the last decade The first book in the series entitled Superconducting Machines and Devices Large Systems Applications edited by S Foner and B B Schwartz 1974 represented a compilation of all the applications of superconducting technology The second book entitled Superconductor Applications Squids and Machines edited by B B Schwartz and S Foner 1977 reviewed small scale applications and updated the large scale applications of superconductivity at that time These two books are both introductions and advanced reference volumes for almost all aspects of the applications of superconductivity The growth of applied superconductivity has mushroomed in the decade of the 1970 s Technologies which were discussed in the beginning of the 1970 s are now beyond the prototype stage Materials development and performance in operating systems is the basis of the continued applications and economic viability of superconducting technology In this book a complete review of all materials technology is presented by leading authorities who were instrumental in the development of superconducting materials technology The present book is based on the NATO Advanced Study Institute entitled Superconducting Materials Science and Technology which was held from August 20 to August 30 1980 in Sintra Portugal
