Supercooled Liquid, Bulk Glassy and Nanocrystalline States of Alloys: Volume 644 Akihisa Inoue, 2001-10-05 The MRS Symposium Proceeding series is an internationally recognised reference suitable for researchers and practitioners

Supercooled Liquid, Bulk Glassy and Nanocrystalline States of Alloys: Akihisa Inoue, Alain Reza Yavari, William L. Johnson, Reinhold H. Dauskardt, 2014-06-05 Since nanocrystallites are often formed as a product of devitrification of metallic glasses and supercooled liquid plays an essential role in bulk glass formation recent research pertaining to these three states of alloys were brought together for discussion into a single MRS symposium Bulk glassy and bulk nanocrystalline alloys are important because they demonstrate exclusively good static and dynamic mechanical properties magnetic properties and good corrosion and wear resistance Some of these alloys also exhibit superplasticity including high strain rate flowability The reports in this book span formation and processing methods of bulk glassy nanocrystalline alloys glass forming ability and thermal stability devitrification and phase transformations properties general physical mechanical magnetic electrical and corrosion resistance structure of bulk glasses supercooled liquid and nanomaterials and diffusion Topics include atomic and electronic structure glass forming ability and thermal stability crystallization and decomposition quasicrystals soft magnetic properties hard magnetism and mechanical and other properties

Bulk Metallic Glasses C. Suryanarayana, A.

Inoue, 2017-11-22 Reflecting the fast pace of research in the field the Second Edition of Bulk Metallic Glasses has been thoroughly updated and remains essential reading on the subject It incorporates major advances in glass forming ability corrosion behavior and mechanical properties Several of the newly proposed criteria to predict the glass forming ability of alloys have been discussed All other areas covered in this book have been updated with special emphasis on topics where significant advances have occurred These include processing of hierarchical surface structures and synthesis of nanophase composites using the chemical behavior of bulk metallic glasses and the development of novel bulk metallic glasses with high strength and high ductility and superelastic behavior New topics such as high entropy bulk metallic glasses nanoporous alloys novel nanocrystalline alloys and soft magnetic glassy alloys with high saturation magnetization have also been discussed Novel applications such as metallic glassy screw bolts surface coatings hyperthermia glasses ultra thin mirrors and pressure sensors mobile phone casing and degradable biomedical materials are described Authored by the world's foremost experts on bulk metallic glasses this new edition endures as an indispensable reference and continues to be a one stop resource on all aspects of bulk metallic glasses

David J. Sellmyer, Yi Liu, 2005 **Metastable**

Solids from Undercooled Melts Dieter Herlach, Dirk Holland-Moritz, Peter Galenko, 2006-12-18 This book presents the physical concepts and tools to characterize and describe the formation of metastable solids from undercooled melts Its aim is to facilitate understanding of the development of the science and technology of solidification of melts and to introduce new concepts within this exciting research field in order to fulfil the challenges of the future in the field of undercooled melts A

comprehensive description of the science and applications of the undercooling phenomenon is given It is composed of several main parts experimental techniques for undercooling characterization of the undercooled melt as the first step in rapid solidification introducing the concepts of modern theories of rapid dendrite and eutectic growth and their comparison with experimental results and a survey of metastable materials formed from the non equilibrium state of an undercooled melt Showing clear links to possible application of results obtained from basic research The subject matter is multidisciplinary and will be of interest to material scientists physicists physical chemists mechanical and electrical engineers **Metastable, Mechanically Alloyed and Nanocrystalline Materials 2003** C.S. Supercooled Liquids, Glass Transition and Bulk Metallic Glasses: Volume 754 Takeshi Egami, 2003-07-16 There has been a renaissance in glass science brought about by the development of concepts such as fragility index and the energy landscape with megabasins Research on bulk metallic glasses has been explosive since their advent when MRS offered its first book on the topic In 2000 a second book broadened the scope to include supercooled liquid bulk glassy and nanocrystalline states This book enhances the scope to include glass transition in diverse materials such as water silicate and polymeric melts Bringing these threads together in an interdisciplinary manner was fruitful and offers proof that while there is much common ground gaps between various approaches to the glassy state remain to be bridged Subjects include the supercooled liquid glass formability structural relaxation and dynamics structure determination and modeling processing and applications of bulk metallic glasses mechanical properties mechanical properties composites crystallization electronic and magnetic structure and properties and nanoparticles and nonmetallic glasses Proceedings of the Japan Academy Nihon Gakushuin, 2005 **Synthesis and Properties of Mechanically Alloyed and Nanocrystalline Materials** Dino Fiorani, Mauro Magini, 1996-10-31 ISMANAM96 Proceedings of the International Symposium on Metastable Mechanically Alloyed and Nanocrystalline Materials ISMANAM 96 Rome Italy May 1996 **Materials Transactions, JIM.**, 2006

Nanostructured Metals and Alloys S H Whang, 2011-03-22 Tensile strength fatigue strength and ductility are important properties of nanostructured metallic materials which make them suitable for use in applications where strength or strength to weight ratios are important Nanostructured metals and alloys reviews the latest technologies used for production of these materials as well as recent advances in research into their structure and mechanical properties One of the most important issues facing nanostructured metals and alloys is how to produce them Part one describes the different methods used to process bulk nanostructured metals and alloys including chapters on severe plastic deformation mechanical alloying and

electrodeposition among others Part two concentrates on the microstructure and properties of nanostructured metals with chapters studying deformation structures such as twins microstructure of ferrous alloys by equal channel angular processing and characteristic structures of nanostructured metals prepared by plastic deformation In part three the mechanical properties of nanostructured metals and alloys are discussed with chapters on such topics as strengthening mechanisms nanostructured metals based on molecular dynamics computer simulations and surface deformation Part four focuses on existing and developing applications of nanostructured metals and alloys covering topics such as nanostructured steel for automotives steel sheet and nanostructured coatings by spraying With its distinguished editor and international team of contributors Nanostructured metals and alloys is a standard reference for manufacturers of metal components as well as those with an academic research interest in metals and materials with enhanced properties
