National Aeronautics and Space Administration,1962 The Method of Characteristics for Three-dimensional Real-gas Flows Charles R. Strom,1967 The method of characteristics is formulated for the computation of the supersonic flow of an inviscid reacting gas over a smooth three dimensional body Various methods of constructing networks of bicharacteristic lines are examined from the point of view of numerical stability and accuracy A new method of forming the network which consists of projecting forward along streamlines from data points on specified data planes is found to be most easily adopted to the particular requirements of nonequilibrium chemistry The general method was coded for the IBM 7090 computer and the program demonstrated for the case of an ideal gas Calculations were made for the case of an ideal gas Calculations were made for the flow about a spherical tip 15 degree half angle cone at 10 degree angle of attack and a generalized elliptical body at zero incidence Since the program yields the pressure distribution along specified streamlines it is straightforward in principle to link it to a finite rate chemistry stream tube program to treat three dimensional nonequilibrium flows Author **Journal of Scientific & Industrial Research** ,1965 Government Reports Announcements & Index ,1988 **Earth and Mineral Sciences** ,1960 **Soviet Science and Technology** ,1987 *NASA Contractor Report* ,1971 **Soviet Science and Technology** 1987 ,1988 *Nuclear Science Abstracts* ,1975-07
