Geometry and Physics of Branes U Bruzzo, V. Gorini, U. Moschella, 2002-11-05 Branes are solitonic configurations of a string theory that are represented by extended objects in a higher dimensional space time They are essential for a comprehension of the non perturbative aspects of string theory in particular in connection with string dualities From the mathematical viewpoint branes are related to several important theories

Proceedings of the International Congress of Mathematicians S.D. Chatterji, 2012-12-06 Since the first ICM was held in Zürich in 1897 it has become the pinnacle of mathematical gatherings It aims at giving an overview of the current state of different branches of mathematics and its applications as well as an insight into the treatment of special problems of exceptional importance The proceedings of the ICMs have provided a rich chronology of mathematical development in all its branches and a unique documentation of contemporary research They form an indispensable part of every mathematical library The Proceedings of the International Congress of Mathematicians 1994 held in Zürich from August 3rd to 11th 1994 are published in two volumes Volume I contains an account of the organization of the Congress the list of ordinary members the reports on the work of the Fields Medalists and the Nevanlinna Prize Winner the plenary one hour addresses and the invited addresses presented at Section Meetings 1-6 Volume II contains the invited address for Section Meetings 7-19 A complete author index is included in both volumes the content of these impressive two volumes sheds a certain light on the present state of mathematical sciences and anybody doing research in mathematics should look carefully at these Proceedings For young people beginning research this is even more important so these are a must for any serious mathematics library The graphical presentation is as always with Birkhäuser excellent Revue Roumaine de Mathématiques pures et Appliquées

EPS - High Energy Physics '89 R.

Fernandez Alvarez-Estrada, C. Lopez, F. Barreiro, 2016-06-03 EPS High Energy Physics 89 presents the proceeding of the International Europhysics Conference on High Energy physics held in Madrid Spain on September 6 13 1989 This book outlines several topics on the interface between cosmology astrophysics and particle physics Organized into two parts encompassing 181 chapters this compilation of papers begins with an overview of the implications of the cosmic light element abundances This text then examines the various aspects of lattice field theory Other chapters consider the theoretical evidence of a fundamental length in string theory and outline the main features of the higher order corrections to the heavy quark inclusive cross section This book discusses as well the theory of heavy quark production in hadron collision The final chapter deals with the idea of low energy supersymmetry which relates the scale of supersymmetry breaking to the origin and stability of the electroweak scale This book is a valuable resource for astrophysicists physicists and scientists

International Books in Print, 1995 Barbara Hopkinson, [Anonymus AC01401231], 1995 Progress In String Theory: Tasi 2003 Lecture Notes Juan M Maldacena, Kalyana T Mahanthappa, 2005-07-12 Intended mainly for advanced graduate students in theoretical physics this comprehensive volume covers recent advances in string theory and field theory dualities It is based on the annual lectures given at the School of the Theoretical Advanced Study Institute 2003 a traditional event that brings together graduate students in high energy physics for an intensive course given by leaders in their fields The first lecture by Paul Aspinwall is a description of branes in Calabi Yau manifolds which includes an introduction to the modern ideas of derived categories and their relation to D branes Juan Maldacena's second lecture is a short introduction to the AdS CFT correspondence with a short discussion on its plane wave limit Tachyon condensation for open strings is discussed in the third lecture by Ashoke Sen while Eva Silverstein provides a useful summary of the various attempts to produce four dimensional physics out of string theory and M theory in the fourth lecture Matthew Strassler's fifth lecture is a careful discussion of a theory that has played a very important role in recent developments in string theory a quantum field theory that produces a duality cascade which also has a large N gravity description The sixth lecture by Washington Taylor explains how to perform perturbative computations using string field theory The written presentation of these lectures is detailed yet straightforward and they will be of great use to both students and experienced researchers in high energy theoretical physics
