Celada, Z.T. Bieniawski, 2019-08-06 This practical and design oriented book focuses on ground characterization and structural calculation as part of the active structural design methodology With a focus on rock tunnelling it offers a comprehensive rather than a topic based perspective deriving sound tunnel design criteria and methods from basic principles Ground characterization includes excavations site investigation and in situ stress determination culminating in geotechnical classifications The book then deals with various construction methods and their appropriate calculations which range from constitutive models for the stress strain behaviour of an excavation and tunnel support elements to a full stress strain analysis methodology The heavily practical approach of the book draws on the authors twenty years of tunnelling experience in Spain and South America It will help any young or established professional who wants to develop a career in the underground field across both civil engineering and geology As it incorporates the very fundamentals of tunneling design it can be used as a support for tunneling courses or as a textbook for master s and PhD courses Benjamín Celada was Chief Tunnel Engineer at Hunosa and Potasas de Navarra S A before founding Geocontrol S A He has also worked for twenty years

as Professor of Underground Works at the Polytechnic Mining University in Madrid Spain Z T Bieniawski directed the Rock Mechanics Department of the Council for Scientific and Industrial Research in Pretoria then taught at the Pennsylvania State University for twenty years North American Tunneling 2004 Levent Ozdemir,2004-04-01 This publication includes papers from the North American Tunneling 2004 conference sponsored by the American Underground Construction Association The theme of the conference is Underground Construction the Sensible Solution to Urban Problems to reflect the increasing importance of locating urban facilities in the United States underground for enhanced security to build critical infrastructure where it is needed and to improve the function of urban areas The papers are grouped in four major themes Management of Underground Projects Public Policy and Underground Projects Advances in Technology Case Studies Trials Tribulation and Triumphs in Tunneling This work should benefit everyone involved in any aspect of infrastructure tunneling and underground construction
