Surface Architecture:

Surface Architecture David Leatherbarrow, Mohsen Mostafavi, 2005-02-11 A study of the building surface architecture as primary instrument of identity and engagement with its surroundings Visually many contemporary buildings either reflect their systems of production or recollect earlier styles and motifs This division between production and representation is in some ways an extension of that between modernity and tradition In this book David Leatherbarrow and Mohsen Mostafavi explore ways that design can take advantage of production methods such that architecture is neither independent of nor dominated by technology Leatherbarrow and Mostafavi begin with the theoretical and practical isolation of the building surface as the subject of architectural design The autonomy of the surface the free facade presumes a distinction between the structural and nonstructural elements of the building between the frame and the cladding Once the skin of the building became independent of its structure it could just as well hang like a curtain or like clothing The focus of the relationship between structure and skin is the architectural surface In tracing the handling of this surface the authors examine both contemporary buildings and those of the recent past Architects discussed include Albert Kahn Ludwig Mies van der Rohe Alison and Peter Smithson Alejandro de la Sota Robert Venturi Jacques Herzog and Pierre de Meuron The properties of a building's surface whether it is made of concrete metal glass or other materials are not merely superficial they construct the spatial effects by which architecture communicates Through its surfaces a building declares both its autonomy and its participation in its surroundings

Surface Architecture David Leatherbarrow, Mohsen Mostafavi, 2005 Visually many contemporary buildings either reflect their systems of production or recollect earlier styles and motifs This text explores ways that design can take advantage of production methods so that architecture is neither independent of nor dominated by technology

Shaping the Surface Stephen Kite, 2022-11-17 *Shaping the Surface* explores the history of modern British architecture through the lens of surface materiality and decoration Picking up on a trait that art historian Nikolaus Pevsner first identified as a national mania for beautiful surface quality this book makes a new contribution to architectural history and visual culture in its detailed examination of the surfaces of British architecture from the middle of the 19th century up to the turn of the 21st century Tracing this continuing sensibility to surface all the way through to the modern era it explores how and why surface and materiality have featured so heavily in recent architectural tradition examining the history of British architecture through a selection of key cultural moments and movements from Romanticism and the Arts and Crafts to Brutalism High Tech Post Modernism Neo Vernacular and the New Materiality Embedded within the narrative is the question of whether such national characters can exist in architecture at all and indeed the extent to which it is possible to identify a British architectural consciousness in an architectural tradition characterised by its continuous importation of theories ideas materials and people from around the globe *Shaping the Surface* provides a deep critique and meditation on the importance of surface and materiality for architects designers and historians everywhere in Britain and beyond while it

also serves as a thematic introduction to modern British architectural history with in depth readings of the works of many key British architects artists and critics from Ruskin and William Morris to Alison and Peter Smithson Eduardo Paolozzi Richard Rogers and Caruso St John

Surfaces Mike Anusas,Cristián Simonetti,2020-02-24 In attending to surfaces as they wrap layer and grow within sentient bodies material formations and cosmological states this volume presents a series of ten anthropological studies stretching across five continents and in observation of earthly practices of making knowing living and dying Through theoretically reflecting on time spent with Aymara and Mapuche Andean cultures the Malagasy people of Madagascar craftspeople and designers across Europe and Oceania amongst the architectures of Australia and South Korea and within the folds of books screens landscape and the sea the anthropologists in this volume communicate diverse ways of considering working with and knowing surfaces Together these writings advance a knowledge of the world which resists any definitive settlement of existential categories and rather seeks to know the world in its emergence and transformation as entities grow cohere shift dissolve decay and are reborn through the contact and exchange of surfaces persisting with varying time power and effect The book principally invites readers from anthropology the creative arts and environmental studies but also across the wider humanities and social sciences as well as those in neighbouring scientific fields of archaeology biology geography geoscience material science neurology and psychology interested in the intersections of mind body materials and world

Surface Giuliana Bruno,2014-06-09 What is the place of materiality the expression or condition of physical substance in our visual age of rapidly changing materials and media How is it fashioned in the arts or manifested in virtual forms In Surface cultural critic and theorist Giuliana Bruno deftly explores these questions seeking to understand materiality in the contemporary world Arguing that materiality is not a question of the materials themselves but rather the substance of material relations Bruno investigates the space of those relations examining how they appear on the surface of different media on film and video screens in gallery installations or on the skins of buildings and people The object of visual studies she contends goes well beyond the image and engages the surface as a place of contact between people and art objects As Bruno threads through these surface encounters she unveils the fabrics of the visual the textural qualities of works of art whether manifested on canvas wall or screen Illuminating the modern surface condition she notes how fa ades are becoming virtual screens and the art of projection is reinvented on gallery walls She traverses the light spaces of artists Robert Irwin James Turrell Tacita Dean and Anthony McCall touches on the textured surfaces of Isaac Julien s and Wong Kar wai s filmic screens and travels across the surface materiality in the architectural practices of Diller Scofidio Renfro and Herzog de Meuron to the art of Doris Salcedo and Rachel Whiteread where the surface tension of media becomes concrete In performing these critical operations on the surface she articulates it as a site in which different forms of mediation memory and transformation can take place Surveying object relations across art architecture fashion design film and new media Surface is a magisterial account of contemporary visual culture

Landscape Architecture ,1914 **John Ruskin and the Fabric of Architecture** Anuradha Chatterjee,2017-10-02

Through the theoretical lenses of dress studies gender science and visual studies this volume analyses the impact John Ruskin has had on architecture throughout the nineteenth and twentieth centuries It explores Ruskin s different ideologies such as the adorned wall veil which were instrumental in bringing focus to structures that were previously unconsidered John Ruskin and the Fabric of Architecture examines the ways in which Ruskin perceives the evolution of architecture through the

idea that architecture is surface The creative act in architecture analogous to the divine act of creation was viewed as a form of dressing By adding highly aesthetic features to designs taking inspiration from the veil of women s clothing Ruskin believed that buildings could be transformed into meaningful architecture This volume discusses the importance of Ruskin s surface theory and the myth of feminine architecture and additionally presents a competing theory of textile analogy in architecture based on morality and gender to counter Gottfried Semper s historicist perspective This book would be beneficial to students and academics of architectural history and theory gender studies and visual studies who wish to delve into Ruskin s theories and to further understand his capacity for thinking beyond the historical methods The book will also be of interest to architectural practitioners particularly Ruskin s theory of surface architecture Towards a Critique of Architecture's Contemporaneity Gevork Hartoonian, 2023-02-14 Pursuing historical analogies between nineteenth century theories and the current practices captivated by digital reproducibility this book offers a critical take on architecture s contemporaneity through four essays tectonics materiality cladding and labor Fundamental to this proposition is the historicity of Gottfried Semper s theorization of architecture amidst the outpouring of new materials and construction techniques during the 1850s Starting with Semper s differentiation between theatricalization and the tectonic of theatricality this book examines thematic essential to architecture s self representation Even though the title of this book recalls the Semperian Four Elements of Architecture its argument encapsulates a unique historico theoretical project probing the tectonic of theatricality beyond Semper The invisible tie between technique and labor is the cord running through the four subjects covered in this book In exploring these subjects from the theoretical standpoint of Marxian dialectics this book s contribution is focused on but not limited to the topicality of labor today when its relationship with capital has been further obscured by the prevailing digitalization of commodity exchange value starting roughly in the 1990s Each essay examines Semper s theorization of architecture in contradistinction to the ways in which technology s mediation has dominated architecture s representation Burrowing through the invisible tie between technique and work asymptomatic of architecture s predicament in global capitalism Towards a Critique of Architecture's Contemporaneity advances the scope of architectural criticism beyond the exhausted formalism and architecture s turn to philosophy circa the 1980s and the present tendencies for presentism It will therefore be of interest to researchers and students of architectural history and theory **BUILDING A SPORTSCAR EXTERIOR TO CLASS-A SURFACING STANDARDS TUTORIAL** Serdar Hakan DÜZGÖREN, PREFACE INTRODUCTION TO CLASS A SURFACING Class A surfacing is to produce mathematical surfaces to the most exacting standard Once completed the A Class surface is the final output of styling design These surfaces are the Master for making the tools that produces the product itself Class A surfacing is one of the most complex and tedious 3D computer modeling tasks you can do Class A surface development occurs in the final phase of a project when constraints are much tighter to adhere to Modeling under these conditions is very hard without adoption of certain surface basics rules 3D computer

modeling is still based on the knowledge and skill set of the individual user Therefore productivity and surface quality is user dependent The surfacing task can begin from the scan of a physical model as in this tutorial but it can also start from 2D sketch or verbal input In most cases it is the continuation of a concept 3D digital model Most of the time you will also need to be aware of and include flanges draft angles tool split lines and other engineering constraints In the tutorial these are not included To include them would put even more constraints on the modeling surfacing itself This tutorial demonstrates only one small part of class A surfacing but a very important element of creating good quality surfaces When you are starting a project or a part always take some time to think how you will build this before you start It is not a good idea to rush in the beginning of a project To be successful and to achieve that right quality in the time given you need a strategy Without this you can find yourself in a corner from which you can never escape a dead end These points below are in my opinion the most important basic rules to succeed It is very important to have a strategy on methodology surface layout and surface construction Always try to build the surfaces to allow easy modification Keep the surfaces as simple as possible Always try to build to an intersection By following these basic rules you have come a long way to succeeding in your modeling Good luck
