Coherent Cooperative Phenomena N. G. Basov, 2012-12-06 This anthology is devoted to the theoretical and experimental study of coherent phenomena in quantum optics Considerable attention is devoted to the investigation of cooperative effects in multilevel molecular and atomic systems The theoretical analysis is based on a single approach using the theory of groups which makes it possible to present the results in a compact and physically elegant form The results of a detailed experimental and theoretical investigation of the photon echo self induced transparency and nutation are presented The theory of a coherent resonant mechanism for the interaction of laser radiation with multi atomic molecules which causes prompt dissociation is presented A number of applied possibilities in particular the control of radiation by laser light and laser isotope separation are analyzed *Surface Properties of Semiconductors and the Dynamics of Ionic Crystals* V. N. Murzin, FOREIGN TECHNOLOGY DIV WRIGHT-PATTERSON AFB OHIO., 1971 Absorption and reflectance spectra of crystalline SrTiO₃ BaTiO₃ and CaTiO₃ in the IR spectral range were obtained on a long wavelength IR spectrometer An analysis of the vibrational modes of compounds having the perovskite structure is given and its application to the experimental spectra is shown by using Cochran's dynamic theory of crystal lattices At a temperature close to a phase transition BaTiO₃ showed a marked lowering of its spectral frequencies and an increase of oscillator strength of the lowest vibrational frequency These observations were predicted by Ginzburg Anderson and Cochran and this article gives the first reported data which are in agreement with this prediction Author **Physics of Atomic Collisions / Fizika Atomnykh Stoknovenii / ФИЗИКА АТОМНЫХ СТОЛКНОВЕНИЙ** D. Skobel tsyn, 2012-12-06 The present collection of articles sets forth the results of experimental research on physical processes in various types of optical quantum devices lasers Data are presented on the regulation of the temporal and spectral characteristics of solid state lasers using a bleachable filter A mode self locking state is realized in which ultrafast light pulses are emitted The stimulated emission in a pinch discharge due to transitions of singly and doubly ionized argon atoms in the visible and ultraviolet parts of the spectrum is investigated Pulsed lasing associated with electron transitions in diatomic molecules at the leading edge of a powerful current pulse in a gas is subjected to systematic analysis The book is aimed at a broad spectrum of scientists and engineers specializing in quantum radiophysics CONTENTS MODE DISCRIMINATION AND THE SELF LOCKING EFFECT IN SOLID STATE LASERS USING A BLEACHABLE FILTER A S Markin Introduction 1 Chapter 1 Q Switching of Lasers

High-Power Lasers and Laser Plasmas / Мощные Лазеры и Лазерная Плазма N. G. Basov, 2012-12-06

Research in Molecular Laser Plasmas N. G. Basov, 2012-12-06 This volume reports investigations which form part of a major series of theoretical and experimental studies being carried out in the Laboratory of Low Temperature Plasma Optics at the Lebedev Physics Institute in Moscow. The papers give the results of systematic investigations of the chemical composition and of the electrical and optical properties of discharge plasmas and also of populations of laser levels. Reliable and detailed information is given on the dissociation of carbon dioxide gas in discharges, the nature of the velocity distribution function, average energies and densities of electrons and populations and vibrational temperatures of molecules in cw CO and CO lasers. The material in this volume is intended for specialists in quantum electronics and low temperature plasma diagnostics.

Nonlinear Optics D. V. Skobel'tsyn, 2012-12-06 In this paper we investigated the dynamics of the processes occurring in a Q switched laser. This work was stimulated by the lack of data on the spatial and temporal development of generation despite the obvious importance of such data in the use of giant light pulses in investigations of the nonlinear interaction of radiation and matter. From a systematic consideration of a relatively simple model of a Q switched laser we analytically investigated two main phases of development of the giant pulse: the phase of linear development of generation which begins with amplification of the spontaneous emission in the modes and the phase of nonlinear transverse development during which the giant light pulse proper is emitted. In addition for a thorough investigation of the picture of development of the pulse as a whole the equations were numerically integrated. Subsequent experiments 26-27 confirmed the occurrence of transverse development of the giant pulse while recent experiments on nonlinear amplification 28 have shown the significance of this effect in the propagation of the giant pulse in a nonlinear medium. A knowledge of the transverse development of the giant pulse would appear to be essential for the exact determination of the true strength of the light field in experiments on multi-photon processes 29. The developed theory also leads to recommendations for the design of lasers to generate giant light pulses of minimum length and minimum divergence of emission.

Radio, Submillimeter, and X-Ray Telescopes N. G. Basov, 2013-12-01 This volume contains the results of research and development connected with the creation of telescopes intended for the new regions of the spectrum mastered by astronomy: the x-ray, submillimeter, far infrared and radio regions. The creation of x-ray, submillimeter and radio telescopes and the receiver apparatus connected with them is a complicated and in many respects unusual problem. Therefore the experience accumulated at the Institute of Physics can prove useful to specialists working in this field. This volume is intended for scientists, engineers and builders occupied in research and development in the fields of x-ray, submillimeter and radio astronomy as well as for students of advanced courses in these
