reservoirs diminishes the need of using enhanced oil recovery EOR methods such as chemical flooding grows A widely used type of chemical EOR is surfactant polymer flooding SP In SP flooding a surfactant reduces the interfacial tension between oil and water to ultra low values allowing residual oil to be mobilized and recovered On the other hand polymer increases the viscosity of the SP slug thus providing better sweep efficiency than waterflooding This EOR method shows promising results in clastic formations Although SP flooding works well in sandstone reservoirs it faces major drawbacks when applied in high temperature high salinity carbonate formations Such harsh environment leads to both surfactant and polymer degradation Moreover because of the positive charge of carbonate surfaces and the large concentration of divalent cations large surfactant retention occurs Here we present the performance of a novel SP formulation that achieves ultra low interfacial tension between oil and water at injected brine salinity of 57 000 ppm with lower surfactant retention than current retention values in carbonates We conducted four core flooding experiments in Indiana limestone cores at 100 C to evaluate the performance of the SP formulation in recovering residual oil The formulation consists of carboxylates internal olefin sulfonates and lauryl betaine surfactants A mixture of dead oil and 20 wt % toluene was used to represent the live oil at ambient pressure The first three core floods recovered 75 5% 72% and 71% respectively However when 1wt% NaPA was injected before the chemical flood in the fourth experiment 90% of the original oil in place was recovered reducing the residual oil to only 4 5% We found that the optimum SP slug size is 0 39PV at which the surfactant retention is 0 29mg g rock In addition reducing the frontal velocity to 0 5ft day resulted in doubling the retention The moderate surfactant retention makes SP flooding in carbonates feasible because less surfactant is needed to reach ultra low interfacial tension This new formulation enables application of SP flooding in high temperature high salinity carbonate reservoirs which in return will increase ultimate oil recovery from conventional reservoirs

SURFACTANT - POLYMER INTERACTION FOR IMPROVED OIL RECOVERY. ,1998 The goal of this research is to use the interaction between a surfactant and a polymer for efficient displacement of tertiary oil by improving slug integrity adsorption and mobility control Surfactant polymer flooding has been shown to be highly effective in laboratory scale linear floods The focus of this proposal is to design an inexpensive surfactant polymer mixture that can efficiently recover tertiary oil by avoiding surfactant slug degradation high adsorption and viscous heterogeneity fingering A mixture comprising a pseudo oil with appropriate surfactant and polymer has been selected to study micellar polymer chemical flooding The physical properties and phase behavior of this system have been determined A surfactant polymer slug has been designed to achieve high efficiency recovery by improving phase behavior and mobility control Recovery experiments have been performed on linear cores and a quarter 5 spot The same recovery experiments have been simulated using a commercially available simulator UTCHEM Good agreement between experimental data and simulation results has been achieved

Alkali-surfactant-polymer (ASP) Flooding - Potential and Simulation for Alaskan North Slope Reservoir Tejas S. Ghorpade, 2014 Enhanced oil recovery EOR is essential to recover bypassed oil and improve recovery factor Alkaline surfactant polymer ASP flooding is a chemical EOR method that can be used to recover heavy oil containing organic acids from sandstone formations It involves injection of alkali to generate in situ surfactants improve sweep efficiency and reduce interfacial tension IFT between displacing and displaced phase and injection of a polymer to improve mobility ratio typically it is followed by extended waterflooding The concentration of alkali surfactant and polymer used in the process depends on oil type salinity of solution pressure temperature of the reservoir and injection water quality This project evaluates the effect of waterflooding on recovery calculates the recovery factor for ASP flooding and optimum concentration of alkali surfactant and polymer for an Alaskan reservoir Also the effects of waterflooding and improvement with ASP flooding are evaluated and compared Studies of these effects on oil recovery were analyzed with a Computer Modeling Group CMG generated model for the Alaskan North Slope ANS reservoir Based on a literature review and screening criteria the Western North Slope WNS 1 reservoir was selected for the ASP process A CMG WinProp simulator was used to create a fluid model and regression was carried out with the help of actual field data The CMG WinProp model was prepared with a 5 spot well injection pattern using the CMG STARS simulator Simulation runs conducted for primary and waterflooding processes showed that the recovery factor increased from 3% due to primary recovery to 45% due to waterflooding at 500 psi drawdown for 60 years with a constant producing gas oil ratio GOR ASP flooding was conducted to increase recovery further and optimum ASP parameters were calculated for maximum recovery Also effect of alkali surfactant and polymer on recovery was observed and compared with ASP flood If proved effective the use of ASP chemicals for ANS reservoirs to increase the recovery factor could replace current miscible gas injection with chemical EOR It will help to develop chemical flooding processes for heavier crude oil produced in harsh environments and create new horizons for chemical industries in Alaska

Commercial Scale Simulations of Surfactant/polymer Flooding Changli Yuan, 2012 The depletion of oil reserves and higher oil prices has made chemical enhanced oil recovery EOR methods more attractive in recent years Because of geological heterogeneity unfavorable mobility ratio and capillary forces conventional oil recovery including water flooding leaves behind much oil in reservoir often as much as 70% OOIP original oil in place Surfactant polymer flooding targets these bypassed oil left after waterflood by reducing water mobility and oil water interfacial tension The complexity and uncertainty of reservoir characterization make the design and implementation of a robust and effective surfactant polymer flooding to be quite challenging Accurate numerical simulation prior to the field surfactant polymer flooding is essential for a successful design and implementation of surfactant polymer flooding A recently developed unified polymer viscosity model was implemented into our existing polymer module within our in house reservoir simulator the

Implicit Parallel Accurate Reservoir Simulator IPARS The new viscosity model is capable of simulating not only the Newtonian and shear thinning rheology of polymer solution but also the shear thickening behavior which may occur near the wellbore with high injection rates when high molecular weight Partially Hydrolyzed Acrylamide HPAM polymers are injected We have added a full capability of surfactant polymer flooding to TRCHEM module of IPARS using a simplified but mechanistic and user friendly approach for modeling surfactant water oil phase behavior The features of surfactant module include 1 surfactant component transport in porous media 2 surfactant adsorption on the rock 3 surfactant oil water phase behavior transitioned with salinity of Type II Type III and Type II phase behaviors 4 compositional microemulsion phase viscosity correlation and 5 relative permeabilities based on the trapping number With the parallel capability of IPARS commercial scale simulation of surfactant polymer flooding becomes practical and affordable Several numerical examples are presented in this dissertation The results of surfactant polymer flood are verified by comparing with the results obtained from UTCHEM a three dimensional chemical flood simulator developed at the University of Texas at Austin The parallel capability and scalability are also demonstrated
