*Surfactants Applications Directory* D.R. Karsa, 1995-10-01 Surfactants are fundamental to the successful operation of the chemical industry This directory has been produced to assist surfactant users to identify the most appropriate products for their application

**Surfactants Applications Directory** D.R. Karsa, P.J. Donnelly, J.M. Goode, 1991-05-31 Existing surfactants directories tend to focus on product identification by tradename producer or chemical type enabling the user only to identify product equivalents and surfactant suppliers Application information where available is usually scant or given as a footnote This new directory approaches the identification of surfactants primarily from the applications standpoint Hence the formulator or end user can readily assess the products available for use in a particular industry sector and select materials giving the required surface active properties For example a formulator of agrochemicals for crop protection can turn to the section which refers to surfactants for use in the agrochemical industry and then easily identify a wetter dispersant system for the production of water dispersible granules Information is presented in an alternative format in the second part of the directory which will help the user to identify swiftly products for a particular application by surface active properties It is difficult if not impossible to identify an industry which does not directly or indirectly utilise surfactants Therefore it has proved necessary to simplify industry classifications to encompass a variety of uses under broader sector titles The industry classifications adopted here have been used in many previous publications and papers and define as accurately as possible the major industries and applications serviced by the surfactant industry The editors have been particularly pleased with the support and response of the industry in the supply of data

data     **Surfactants: Chemistry, Interfacial Properties, Applications** D. Möbius, R. Miller, V.B. Fainerman, 2001-12-21  
This publication provides comprehensive material on the chemical and physical attributes of surfactants and new models for the understanding of structure property relationships. Surfactants Chemistry Interfacial Properties Applications provides efficient instruments for the prognostication of principal physicochemical properties and the technologic applicability from the structure of a surfactant through the discussion of interrelations between the chemical structure, physicochemical properties and the efficiency of technologic application. Also included are informative overviews on new experimental techniques and abundant reference material on manufacturers' nomenclature, product properties and experimental examples. The publication is accompanied by a CD ROM which is needed for the application of the thermodynamic and kinetic models to experimental data.

**Handbook of Surfactants** M.R. Porter, 2013-04-17  
The worldwide consumption of surfactants now exceeds several million tonnes per annum. Six of the major types represent approximately 80% of the volume consumed, whereas the remaining 20% is made up of approximately 40 different chemical types. Commercially produced surface active agents are not pure chemicals and within each chemical type there can be tremendous variation. Technical staff who are not familiar with surfactants are frequently bewildered by the enormous variety of different products on the market and the vast body of literature which exists on the composition and properties of surfactants. The selection of the best surfactant for any given use therefore becomes a major problem. This volume arose from the clear need to have available a simple reference book summarising the different types of surfactants on the market and their properties. The concept and structure of the book evolved from early attempts to define chemical structure property relationships of all the different types of surfactants commercially available into a simple handbook providing essential background information for the surfactant user. It is realised that most users will be developing their own data bank of structure end use property relationships and they will therefore be the experts on end use.

*Surfactants in Polymers, Coatings, Inks, and Adhesives* David R. Karsa, 2020-01-16  
Surface active agents are used as process aids in the production of polymers as additives to impart or modify polymer properties and in the formulation and further processing of polymeric systems for a variety of applications. In all these uses the surfactants are used as effect chemicals to impart specific performance characteristics or properties to the base polymer or to enhance its performance when formulated for a specific end use. This volume focuses on those surfactant areas incorporating the greatest number of supplier and user companies. Authors have been selected from leading industrial and academic laboratories around the world. It provides an introduction to the underlying chemistry and technology in these industrial areas and at the same time highlights important recent developments. Surfactants in Polymers, Coatings, Inks and Adhesives is a book for surfactant researchers and for manufacturers and users of surfactants. In particular, surfactant chemists, analytical chemists, environmental chemists, users of surfactant formulations in the fields of specialty chemicals, polymers and detergents, and health and safety personnel.
