The Gulf:

Under Construction: Logics of Urbanism in the Gulf Region Steffen Wippel, Katrin Bromber, Birgit Krawietz, 2016-02-17 Interdisciplinary in approach this volume explores and deciphers the symbolic value and iconicity of the built environment in the Arab Gulf Region its aesthetics language and performative characteristics Bringing together a range of studies by artists curators and scholars it demonstrates how Dubai appeared at least until the financial crisis to be leading the construction race and has already completed a large number of its landmark architecture and strategic facilities In contrast cities like the Qatari capital Doha still appear to be heavily under construction and in countries like the Sultanate of Oman ultra luxury tourism projects were started only recently While the construction of artificial islands theme parks and prestige sport facilities has attracted considerable attention much less is known about the region's widespread implementation of innovative infrastructure such as global container ports free zones inter island causeways and metro lines This volume argues that these endeavours are not simply part of a strategy to prepare for the post oil era for future economic survival and prosperity in the Lower Gulf region but that they are also aiming to strengthen identitarian patterns and specific national brands In doing so they exhibit similar yet remarkably diverse modes of engaging with certain global trends and present questionably distinct ideas for putting themselves on the global map Each country aims to grab attention with regard to the world wide flow of goods and capital and thus provide its own citizens with a socially acceptable trajectory for the future By doing that the countries in the Gulf are articulating a new semiotic and paradigm of urban development For the first time this volume maps these trends in their relation to architecture and infrastructure in particular by treating them as semiotics in their own right It suggests that recent developments in this region of the world not only represent *Protecting the Gulf's Marine Ecosystems from Pollution* Abdulaziz H. Abuzinada, Hans-Jörg Barth, Friedhelm Krupp, Benno Böer, Thabit Zahran Al Abdessalaam, 2008-03-05 This volume reviews present sources and levels of pollution in The Gulf assesses their causes and effects on biota and ecosystems and identifies preventive and remedial measures reducing levels of pollution and mitigating adverse impacts It is supported by UNESCO Doha Understanding and Predicting the Gulf of Mexico Loop Current National Academies of Sciences, Engineering, and Medicine, Gulf Research Program, Committee on Advancing Understanding of Gulf of Mexico Loop Current Dynamics, 2018-05-23 One of the most significant energetic yet not well understood oceanographic features in the Americas is the Gulf of Mexico Loop Current System LCS consisting of the Loop Current LC and the Loop Current Eddies LCEs it sheds Understanding the dynamics of the LCS is fundamental to understanding the Gulf of Mexico's full oceanographic system and vice versa Hurricane intensity offshore safety harmful algal blooms oil spill response the entire Gulf food chain shallow water nutrient supply the fishing industry tourism and the Gulf Coast economy are all affected by the position strength and structure of the LC and associated eddies This report recommends a strategy for addressing the key gaps in general understanding of LCS processes in order to instigate a

Akhonbay, 2018-09-27 The Cooperation Council for the Arab States of the Gulf GCC has been at the epicenter of global energy markets because of its substantial endowment of hydrocarbons Yet countries in the region have also stated their intent to be global leaders in renewable energy This collection explores the drivers for the widespread adoption of renewable energy around the GCC the need for renewable energy and the policy economic factors that can create success All six countries within the GCC have plans to include renewable energy power generation in their energy mix for various reasons including a growing demand for electricity because of increasing populations an increasing government fiscal deficit due to inefficient subsidies the need to diversify the economy and global pressure to meet climate change requirements However the decision of when and by how much to introduce renewable energy is fraught with complications
