The Rational Animal Ludwig Huber, 2024-07-09 In this book the major and at the same time most difficult questions of comparative cognition research here called the sextet of animal intelligence are presented using good examples discussed in all their facets and finally answered with due caution Starting with the question of human rationality which is illuminated historically at the beginning and presented as a framework concept the latest research is dealt with which either revises preferred interpretation schemes or calls for new ones It is particularly important to critically question hastily conceived categorisations often derived from research on the human species and from everyday psychological notions and to consider so called animal irrationality as a mis performance from the perspective of species specific natural requirements Why is it at all important to know whether animals can act rationally intentionally or consciously The answer is because it is of both theoretical and practical relevance Theoretical relevance is twofold because it is good in itself to understand animals better but this knowledge is then also of great importance for assessing ourselves This brings up the practical relevance we are not only surrounded by animals we live with animals we live from animals Yet we see ourselves as separate from them in important ways Consciousness language and rationality are essential characteristics with which we justify our human uniqueness and thus our superiority and ultimately our right to dominate and use animals in many ways If an animal can feel pain we feel obliged to avoid inflicting unnecessary pain on it But yet we do not accord it the special inherent value and dignity associated with consciousness and rationality This has far reaching consequences for human action and the coexistence of humans and animals

**The Theory of Search Games and Rendezvous** Steve Alpern, Shmuel Gal, 2006-04-10 Search Theory is one of the original disciplines within the field of Operations Research It deals with the problem faced by a Searcher who wishes to minimize the time required to find a hidden object or target The Searcher chooses a path in the search space and finds the target when he is sufficiently close to it Traditionally the target is assumed to have no motives of its own regarding when it is found it is simply stationary and hidden according to a known distribution e g oil or its motion is determined stochastically by known rules e g a fox in a forest The problems dealt with in this book assume on the contrary that the target is an independent player of equal status to the Searcher who cares about when he is found We consider two possible motives of the target and divide the book accordingly Book I considers the zero sum game that results when the target here called the Hider does not want to be found Such problems have been called Search Games with the zero sum qualifier understood Book II considers the opposite motive of the target namely that he wants to be found In this case the Searcher and the Hider can be thought of as a team of agents simply called Player I and Player II with identical aims and the coordination problem they jointly face is called the Rendezvous Search Problem

Becoming Other Alex Gillespie,2006-12-01 The research reported in this book is unapologetically Meadian While the work of George Herbert Mead has been of widespread significance and his name is often cited there are in fact few empirical studies that have sought to rigorously instantiate his ideas This is in part because his theory is abstruse and in part because there have been so many divergent interpretations of his theory The point of departure for the present research is a novel interpretation of Mead Mead s core problematic I argue is how to explain self reflection and his answer to this is the theory of the social act The present research is an attempt to instantiate this reading This book puts to rest any glorification of postmodernist belief in the local nature of knowledge and context specificity of human cultural acts as a part of the image of fragmented human lives Human beings are differentiated and hierarchically integrated wholes who regulate their own organization by cultural means This conceptual deathblow to postmodernist ideologies is done here without denying the reality of context specificity In fact all the evidence in this book shows that each and every moment in the touring act is context bound and hence unique Yet there is generality operating upon and creating that uniqueness The author s careful development of theoretical insights George Herbert Mead reached in his self dialogues almost a century ago is a new step in the development of cultural psychology as a Wissenschaft aiming at making sense of the human conditions in its generic ways This itself is an exploring act one that the social sciences need very much at our present time of abundance of fragmented bits and pieces of information about the others that lead us to search for our own unified selves through invention of new ways for touring

The Handgame of the Kiowa, Comanche, and Apache William C. ethnographic fieldwork and the author's own participation since the early 1990s the book also incorporates extensive archival research in ethnographic archaeological and historical sources Examining such topics as the handgame's relation to language gender roles economics and tribal sovereignty Meadows argues that the game is just as important in tribal contexts as other more widely known activities such as powwows dances sweat lodges and stickball in maintaining American Indian culture and ethnicity *The Handgame of the Kiowa Comanche and Apache* affords readers a greater sense of how this traditional game has developed how its practitioners feel about it how it is played and why it is in the words of the author so spirited popular and infectious as an activity
