**Cameras at War** John Wade, 2020-07-30 A comprehensive history of the development and use of cameras in recording British military conflicts from the 1850s to the 1950s Books about war and the pictures that came out of conflict usually concentrate on the picture content But behind every picture there is a camera and that's what this book is about Profusely illustrated throughout with pictures of the cameras rather than the pictures they took it looks at one hundred years of conflict from the Crimean War to the Korean War It begins in the days when a photographer needed to be more of a scientist than an artist such were the difficulties of shooting and processing any photograph It ends with the cameras whose compact dimensions versatility and ease of use meant that photographers could largely forget the science and concentrate on the art Some cameras simply recorded events Others defined and changed the way those events proceeded These were the cameras that went to war and this is their story Praise for *Cameras at War* An amazing collection of superb photographs beginning with some from the Crimean War coupled with a brilliant narrative that emphasizes the use of photography to record conflict Where would we be without such evidentiary mementoes Books Monthly UK

**The Anime Machine** Thomas Lamarre, 2013-11-30 Despite the longevity of animation and its significance within the history of cinema film theorists have focused on live action motion pictures and largely ignored hand drawn and computer generated movies Thomas Lamarre contends that the history techniques and complex visual language of animation particularly Japanese animation demands serious and sustained engagement and in *The Anime Machine* he lays the foundation for a new critical theory for reading Japanese animation showing how anime fundamentally differs from other visual media *The Anime Machine* defines the visual characteristics of anime and the meanings generated by those specifically animetic effects the multiplanar image the distributive field of vision exploded projection modulation and other techniques of character animation through close analysis of major films and television series studios animators and directors as well as Japanese theories of animation Lamarre first addresses the technology of anime the cells on which the images are drawn the animation stand at which the animator works the layers of drawings in a frame the techniques of drawing and blurring lines how characters are made to move He then examines foundational works of anime including the films and television series of Miyazaki Hayao and Anno Hideaki the multimedia art of Murakami Takashi and CLAMP's manga and anime adaptations to illuminate the profound connections between animators characters spectators and technology Working at the intersection of the philosophy of technology and the history of thought Lamarre explores how anime and its related media entail material orientations and demonstrates concretely how the animetic machine encourages a specific approach to thinking about technology and opens new ways for understanding our place in the technologized world around us *Camera*, 1981
