

PRODUCING EFFECTIVE GRAPHS WITH SAS/GRAPH® SOFTWARE

Betsy Corning
SAS Institute Inc.

INTRODUCTION

Effective graphs clarify and focus data. They are accurate, unambiguous, readable, and attractive. Effective graphs are the result of attention to visual details, focus on critical information, and conscientious presentation of data in an appropriate form. This paper explores some characteristics of effective graphs and shows how SAS/GRAPH software helps you produce graphs that are informative, complete, and clear.

PART 1: USING GRAPHIC ELEMENTS EFFECTIVELY

From a design perspective, graphs are made up of many elements such as typeface, lines, symbols, patterns, and so forth. The treatment of these elements affects the graph's clarity and ability to convey information. If the elements embody the design principles of simplicity, focus, contrast, and legibility, the graph will be readable and attractive. Otherwise, the graph data being cluttered, confusing, and unintelligible. This part presents some principles of good graphic design and demonstrates how to apply these principles in the design and production of your graphs.

Guideline 1: Provide Legible Text

Text in a graph should be informative and readable, not decorative. In addition, it should draw attention to the most important areas of the graph.

Make the Text Large Enough to be Readable

When designing text, consider whether the reader will view the graph on a printed page, as a slide, on an overhead transparency, or on a computer screen, and adjust the text size accordingly. In SAS/GRAPH software, you can easily control the size of titles and other text for one graph or for a series of graphs with the HTITLE= and HTEXT= graphics options in a GOPTIONS statement.

When specifying text height, consider both the size of the characters and the units. Specifying text height in terms of percentage of the graphics output area keeps the text in proportion to the overall dimensions of the output regardless of the output device. To make percent the default unit for most size specifications, specify GUNIT=PCT in the

GOPTIONS statement. These graphics options set the height of the first title (8 percent) and all other text height (4.8 percent) in Output 1:

```
goptions graph=plot htitle=8 htext=4.8;
```

Limit Variations in Type to One or Two per Graph

Since graphs typically contain two types of information — information about the graph (such as titles or footnotes), and information that is part of the graph (such as legends and axis labels or values) — two distinct typefaces or styles are usually adequate. Here are two approaches to selecting type:

Using two typefaces. Select one typeface for display text such as titles and footnotes, and another typeface for labels for parts of the graph (axes, tick marks, bars), comments, or other general text. You can specify type for the entire graph with the FTITLE= and FTEXT= graphics options in a GOPTIONS statement. FTITLE= affects the first title (generated by the TITLE1 statement) and FTEXT= affects the rest of the text.

Output 1. Using Two Typefaces

Be sure to choose distinct typefaces. Typically, one serif face and one sans serif face make a good combination. This GOPTIONS statement specifies Zapf (a serif font) for the first title and Swiss (a sans serif font) for all other text in Output 1:

```
goptions graph=plot htitle=8 htext=4.8  
ftitle=swiss ftext=zapf;
```

In addition, the second title and the footnote also use Zapf so that they match the first title. Font

SAS Graphics for Clinical Trials by Example Kriss Harris,Richann Watson,2020-11-25 Create industry compliant graphs with this practical guide for professionals Analysis of clinical trial results is easier when the data is presented in a visual form However clinical graphs must conform to specific guidelines in order to satisfy regulatory agency requirements If you are a programmer working in the health care and life sciences industry and you want to create straightforward visually appealing graphs using SAS then this book is designed specifically for you Written by two experienced practitioners the book explains why certain graphs are requested gives the necessary code to create the graphs and shows you how to create graphs from ADaM data sets modeled on real world CDISC pilot study data SAS Graphics for Clinical Trials by Example demonstrates step by step how to create both simple and complex graphs using Graph Template Language GTL and statistical graphics procedures including the SGPLOT and SGPanel procedures You will learn how to generate commonly used plots such as Kaplan Meier plots and multi cell survival plots as well as special purpose graphs such as Venn diagrams and interactive graphs Because your graph is only as good as the aesthetic appearance of the output you will learn how to create a custom

style change attributes and set output options Whether you are just learning how to produce graphs or have been working with graphs for a while this book is a must have resource to solve even the most challenging clinical graph problems

Classical Methods of Statistics Otto J.W.F. Kardaun,2005-09-16 Classical Methods of Statistics is a guidebook combining theory and practical methods It is especially conceived for graduate students and scientists who are interested in the applications of statistical methods to plasma physics Thus it provides also concise information on experimental aspects of fusion oriented plasma physics In view of the first three basic chapters it can be fruitfully used by students majoring in probability theory and statistics The first part deals with the mathematical foundation and framework of the subject Some attention is given to the historical background Exercises are added to help readers understand the underlying concepts In the second part two major case studies are presented which exemplify the areas of discriminant analysis and multivariate profile analysis respectively To introduce these case studies an outline is provided of the context of magnetic plasma fusion research In the third part an overview is given of statistical software separate attention is devoted to SAS and S PLUS The final chapter presents several datasets and gives a description of their physical setting Most of these datasets were assembled at the ASDEX Upgrade Tokamak All of them are accompanied by exercises in form of guided minor case studies The book concludes with translations of key concepts into several languages

How to Create an Independent Research Program Melanie Jacobs Krieger,1999-06-15 Only a few hundred schools across the United States have research programs Although some of the schools with programs are magnet schools or highly advantaged schools many ordinary schools have successful programs Every school is capable of at least a modest program for those students who want to work on independent research projects This practical book provides a school district with a comprehensive guide on how to establish an independent research program Use this book as your step by step guide to creating an independent research program and preparing your students to enter the national independent research competitions Although the curriculum described in this book is based on the objectives of various national competitions the students are not in a competitive classroom environment Instead the competition rules are used to create a working atmosphere that resembles the professional world Krieger takes you from selling the idea of the program to educators students and the community through critical curriculum and methodology for the teacher to finally entering national research competitions and continuing your program
