Foundation Study Group, 27,1967 *The Human Adrenal Cortex, Volume 8* G. E. W. Wolstenholme, Margaret P. Cameron, 2009-09-17 The Novartis Foundation Series is a popular collection of the proceedings from Novartis Foundation Symposia in which groups of leading scientists from a range of topics across biology chemistry and medicine assembled to present papers and discuss results The Novartis Foundation originally known as the Ciba Foundation is well known to scientists and clinicians around the world **Adrenal Cortex** David C. Anderson, Jeremy S. D. Winter, 2013-10-22 Adrenal Cortex presents a critical review of functional and structural zonation of the cortex It discusses the regulation of adrenocortical function by control of growth and structure It also addresses the adrenal cortex in the fetus and neonate It demonstrates the cellular mechanisms involved in the acute and chronic actions of ACTH Some of the topics covered in the book are the molecular structures of mineralocorticoid and glucocorticoid receptors description of adrenarche and adrenal hirsutism types of congenital enzymatic defects of the adrenal aetiology and management of Cushing's syndrome and the relationship between adrenal cortex and hypertension The description and characteristics of adrenocortical dysfunction are fully covered The interactions between the adrenal cortex and medulla are extensively discussed An in depth analysis of the pharmacokinetics of natural and synthetic glucocorticoids is provided A study of the regulation of normal steroidogenesis by adrenocortical structure is well presented A chapter is devoted to possible role of vascular system in neural stimulations The book can provide useful information to neurologists doctors students and researchers [The Human Adrenal Cortex](#) Ciba Foundation, 1955 **ACTH Action in the Adrenal Cortex: From Molecular Biology to Pathophysiology** Nicole Gallo-Payet, Antoine Martinez, André Lacroix, 2017-07-27 By stimulating adrenal gland and corticosteroid synthesis the adrenocorticotrophic hormone ACTH plays a central role in response to stress In this Research Topic a particular attention has been given to the recent developments on adrenocortical zonation the growth promoting activities of ACTH the various steps involved in acute and chronic regulation of steroid secretion by ACTH including the effect of ACTH on circadian rhythms of glucocorticoid secretion The Research Topic also reviews progress and challenges surrounding the properties of ACTH binding to the MC2 receptor MC2R including the importance of melanocortin 2 receptor accessory protein MRAP in MC2R expression and function the various intracellular signaling cascades which involve not only protein kinase A the key mediator of ACTH action but also phosphatases phosphodiesterases ion channels and the cytoskeleton The importance of the proteins involved in the cell detoxification is also considered in particular the effect that ACTH has on protection against reactive oxygen species generated during steroidogenesis The impact of the cellular microenvironment including local production of ACTH is discussed both as an important factor in the maintenance of homeostasis but also in pathological situations such as severe inflammation Finally the Research Topic reviews the role that the pituitary adrenal axis may have in the development of metabolic disorders In addition to mutations or alterations of expression of genes encoding components of the steroidogenesis and signaling pathways chronic stress and sleep disturbance are both associated with hyperactivity of the

adrenal gland A resulting effect is increased glucocorticoid secretion inducing food intake and weight gain which in turn leads to insulin and leptin resistance These aspects are described in detail in this Research Topic by key investigators in the field Many of the aspects addressed in this Research Topic still represent a stimulus for future studies their outcome aimed at providing evidence of the central position occupied by the adrenal cortex in many metabolic functions when its homeostasis is disrupted An in depth investigation of the mechanisms underlying these pathways will be invaluable in developing new therapeutic tools and strategies

The Human Adrenal Cortex Alastair R. Currie,1962 [Tumors of the Adrenal Gland and Extra-adrenal Paraganglia](#) Ernest E. Lack,Armed Forces Institute of Pathology (U.S.),Universities Associated for Research and Education in Pathology,1997

Tumors of the Adrenal Glands and Extraadrenal Paraganglia Ernest E. Lack,2007 In order to attain a better understanding of the varied morphology of neoplasms of the adrenal cortex medulla and extraadrenal paraganglia structural aspects of normal anatomy including hyperplasia are illustrated here Numerous new colour illustrations appear in this edition and a large number have been replaced or upgraded using high quality transparencies for digital imaging The contributions of cytology and fine needle aspiration biopsy in diagnosis are emphasised particularly with respect to adrenal tumors Emphasis is also placed on the important role of molecular pathology and immunohistochemistry in tumour diagnosis and in some cases may provide valuable information regarding prognosis

[The Human Adrenal Cortex: Its Function Throughout Life](#) Ciba Foundation Study Group, 27,1967

Adrenal Cortex: From Physiology to Disease Pierre Val,Antoine Martinez,2016-07-18 The adrenal gland plays essential roles in the control of body homeostasis stress and immune responses The adrenal cortex represents up to 90% of the gland and is specialised in the production of mineralocorticoids glucocorticoids and adrenal androgens This production is tightly coordinated and results from a unique zonal organisation Although our knowledge of the molecular mechanisms controlling adrenal steroidogenesis is quite extensive for decades the mechanisms of adrenal cortex development cellular homeostasis and renewal have remained elusive The advent of new high throughput technologies and sophisticated genetic approaches has brought tremendous progress in our understanding of how the adrenal cortex achieves and maintains its particular organisation The aim of this Frontiers in Endocrinology Topic is to provide readers with a snapshot of our current knowledge on adrenal physiology and how deregulations of these processes result in adrenal diseases This includes but is not limited to basic research on adrenal development cell lineage identification progenitor cells tissue renewal control of differentiation and zonation and clinical research on the identification of disease related genes
