Lung Stem Cells in Development, Health and Disease Nikolic, Marko Z.,Hogan, Brigid L.M.,2021-04-01 Most organs in the adult human body are able to maintain themselves and undergo repair after injury these processes are largely dependent on stem cells In this Monograph the Guest Editors bring together leading authors in the field to provide information about the different classes of stem cells present both in the developing and adult lung where they are found how they function in homeostasis and pathologic conditions the mechanisms that regulate their behaviour and how they may be harnessed for therapeutic purposes The book focuses on stem cells in the mouse and human lung but also includes the ferret as an increasingly important new model organism Chapters also discuss how lung tissue including endogenous stem cells can be generated in vitro from pluripotent stem cell lines This state of the art collection comprehensively covers one of the most exciting areas of respiratory science **Stem Cell-Based Therapy for Lung Disease** Janette K. Burgess,Irene H.

Heijink,2019-11-23 This book presents state of the art pre clinical models and clinical applications of stem cell based therapies applied to different lung diseases with a special focus on the translation of bench data into clinical studies Starting with the assumption that abnormal lung tissue repair and regeneration has emerged as the driving force underlying pathogenesis and progression in many lung diseases it sheds new light on the potential of stem stromal cells as drivers of repair and sources of reparative factors in the lung The first part of the book offers an overview of stem cell types and mechanisms involved in lung development homeostasis repair and regeneration and reveals the crucial role of the extracellular matrix within the lung microenvironment In the second part leading experts present the latest pre clinical evidence and clinical applications of stem cell based therapies in a wide variety of lung diseases ranging from COPD and lung fibrosis to other rare lung diseases The last section discusses stem cell delivery systems and devices such as aerosolised spray application This book appeals to pneumologists stem cell and matrix biologists as well as bioengineers with a special
