The Human Subject The Social Psychology Of The Psychological Experiment:

The Human Subject John G. Adair, 1973 For the past fifty years one fundamental aspect of the methodology of psychology has resisted evolution and growth the relationship of the human subject to the psychological experiment Adopting the natural science model of the experimental method we have regarded the interaction of subject experimenter and study as fixed and the laboratory as a methodologically sterile setting for the study of behavior Recent research on the social psychology of the psychological experiment has proved us wrong Research has revealed social contamination in the laboratory the subject and experimenter provide a stimulus for each other their respective attitudes feelings and expectations influencing the data that are collected This research as proposed ways to control or measure subject and experimenter bias in a study as well as alternatives to the traditional laboratory experiment Because of its diversity however it is not easily interpretable and its implications for methodological changes are not clear This book provides an integrated view of this research and speculates on its implications for future experimentation It is hoped that readers will gain from it a mature understanding of the experimental process concern for its human element and an appreciation of some of the unique controls they must exercise *The Nature of Theory and Research in Social Psychology* Clyde Hendrick, Russell A.

Faden, Tom L. Beauchamp, Nancy M. P. King, 1986 Clearly argued and written in nontechnical language this book provides a definitive account of informed consent It begins by presenting the analytic framework for reasoning about informed consent found in moral philosophy and law The authors then review and interpret the history of informed consent in clinical medicine research and the courts They argue that respect for autonomy has had a central role in the justification and function of informed consent requirements Then they present a theory of the nature of informed consent that is based on an appreciation
