Borgese,J. Robin Harris,2012-12-06 In step with the surge of interest in the endoplasmic reticulum the current volume takes an integrated look at this functionally diverse organelle Coverage includes protein translocation and export lipid metabolism antigen presentation and many other subjects gleaned from such diverse fields as cell biology enzymology and membrane biochemistry immunology and signal transduction **Intracellular Calcium Regulation** Hermann Bader,1986 *Cell Membranes* E. Elson,W. Frazier,L. Glaser,2012-12-06 This volume assembles reviews on topics in two major related areas One of these concerns the interactions of cells with substrata and with other cells which are mediated by the extracellular matrix and soluble molecules As described in this volume these interactions are responsible for controlling cell functions ranging from embryogenesis and neural development to blood clotting More over important properties of the extracellular matrix can be modulated by the interdependent actions of tumor cells and fibroblasts The other major area of interest concerns the response of cells to extracellular signals Recent work has begun to reveal how a remarkable diversity of cellular functions including neuronal proliferative membrane cytoskeletal and many other kinds of re sponses are elicited through the mediation of a relatively small and interdepen dent set of second messenger systems These include both changes in cytoplasmic ionic balances and activation of various kinds of protein kinases Both subjects are covered in this volume The two areas are linked by the common theme of cellular response to an external environment that is sensed through cellular interactions with informational molecules which are soluble agents as well as those that are components of insoluble matrices It is only recently that we have come to appreciate the complex interplay between the matrix surrounding a cell and the cell s response to hormones and growth factors Thus we have tried to select examples in which this type of extracellular integration may playa role **The Vascular Endothelium I** Salvador Moncada,Annie Higgs,2006-12-22 This wide ranging work provides a complete representation of the present state of knowledge of the vascular endothelium The volume comprises 20 chapters by experts who have made significant contributions to research in the vascular endothelium The text discusses the structure development and function of the normal vascular endothelium considers conditions that lead to the disruption of vascular physiology and provides a comprehensive description of pathologies and their treatment Abiotic Stress Signaling in Plants: Functional Genomic Intervention, Volume II Girdhar Kumar Pandey,Ashish Kumar Srivastava,Amita Pandey,Maik Böhmer,2024-01-31 This Research Topic is part of the Abiotic Stress Signaling in Plants Functional Genomic Intervention series Abiotic Stress Signaling in Plants Functional Genomic Intervention Abiotic stresses such as high temperature low temperature drought and salinity limit crop productivity worldwide Understanding plant responses to these stresses is essential for rational engineering of crop plants In Arabidopsis the signal transduction pathways for abiotic stresses light several phytohormones and pathogenesis have been elucidated A significant portion of
