Edirisinghe,2022-09-08 This book highlights recent advances in smart cities technologies with a focus on new technologies such as biometrics blockchains data encryption data mining machine learning deep learning cloud security and mobile security During the past five years digital cities have been emerging as a technology reality that will come to dominate the usual life of people in either developed or developing countries Particularly with big data issues from smart cities privacy and security have been a widely concerned matter due to its relevance and sensitivity extensively present in cybersecurity healthcare medical service e commercial e governance mobile banking e finance digital twins and so on These new topics rises up with the era of smart cities and mostly associate with public sectors which are vital to the modern life of people This volume summarizes the recent advances in addressing the challenges on big data privacy and security in smart cities and points out the future research direction around this new challenging topic **Handbook of Smart Antennas for RFID Systems** Nemai Chandra Karmakar,2010-11-02 The Handbook of Smart Antennas for RFID Systems is a single comprehensive reference on the smart antenna technologies applied to RFID This book will provide a timely reference book for researchers and students in the areas of both smart antennas and RFID technologies It is the first book to combine two of the most important wireless technologies together in one book The handbook will feature chapters by leading experts in both academia and industry offering an in depth description of terminologies and concepts related to smart antennas in various RFID systems applications Some topics are adaptive beamforming for RFID smart antennas multiuser interference suppression in RFID tag reading phased array antennas for RFID applications smart antennas in wireless systems and market analysis and case studies of RFID smart antennas This handbook will cover the latest achievements in the designs and applications for smart antennas for RFID as well as the basic concepts terms protocols systems architectures and case studies in smart antennas for RFID readers and tags Distributed Economic Operation in Smart Grid: Model-Based and Model-Free Perspectives Jiahu Qin,Yanni Wan,Fangyuan Li,Yu Kang,Weiming Fu,2023-01-25 This book aims to work out the distributed economic operation in smart grids in a systematic way which ranges from model based to model free perspectives The main contributions of this book can be summarized into three folds First we investigate the fundamental economic operation problems in smart grids from model based perspective Specifically these problems can be modeled as deterministic optimization models and we propose some distributed optimization algorithms by integrating the multi agent consensus theory and optimization techniques to achieve the distributed coordination of various generation units and loads Second due to the randomness of the large scale renewable energies and the flexibility of the loads we further address these economic operation problems from a model free

perspective and we propose learning based approaches to address the uncertainty and randomness At last we extend the idea of model based and model free algorithms to plug in electric vehicles PEVs charging discharging scheduling problem the key challenge of which involves multiple objectives simultaneously while the behavior of PEVs and the electricity price are intrinsically random This book presents several recent theoretical findings on distributed economic operation in smart grids from model based and model free perspectives By systematically integrating novel ideas fresh insights and rigorous results this book provides a base for further theoretical research on distributed economic operation in smart grids It can be a reference for graduates and researchers to study the operation and management in smart grids Some prerequisites for reading this book include optimization theory matrix theory game theory reinforcement learning etc **Advances in**
