Steel Sheet Pile Walls in Soft Soil Dick Arjen Kort, 2002-01-01 *Geotechnics of Soft Soils: Focus on Ground Improvement* Minna Karstunen, Martino Leoni, 2008-08-25 Natural soft soils are very complex materials. As construction activities increasingly take place in poor ground conditions, ground improvement is often required. However, design practices for ground improvement were for long at best crude and conservative and at worst unsafe. Although new construction and field observation techniques have been developed, Geotechnical Aspects of Underground Construction in Soft Ground Klaas Jan Bakker, Adam Bezuijen, Wout Broere, E.A. Kwast, 2013-05-23 A valuable source of reference on the current practices of analysis, design and construction of tunnels and underground structures in soft ground. This collection of reviewed papers covers a wide range of tunnelling practice from deep excavations in Singapore to the construction of a new metro line in Barcelona. The international scope of the contributors makes this a truly comprehensive collection of work on the geotechnical aspects of soft ground excavation. *Soft Ground Engineering in Coastal Areas* Takashi Tsuchida, Yoichi Watabe, Minsoo Kang, Osamu Kusakabe, Masaaki Terashi, 2003-01-01 This volume contains the papers contributed to the Nakase Memorial Symposium with the theme Soft Ground Engineering in Coastal Areas held in Yokosuka, Japan, in November 2002. The meeting was organized as a tribute to Professor Ako Nakase and was attended by 125 participants including his Japanese colleagues and friends from overseas. The topics covered included: fundamental characteristics of clay soils; estimation of consolidation settlement in large scale reclamation; soil improvement methods in coastal areas; reuse of dredged soils and behaviour of coastal structures under earthquake; and evaluation for the stability of coastal structures.

Physical Modelling in Geotechnics, Volume 2 Andrew McNamara, Sam Divall, Richard Goodey, Neil Taylor, Sarah Stallebrass, Jignasha Panchal, 2018-07-11 Physical Modelling in Geotechnics collects more than 1500 pages of peer-reviewed papers written by researchers from over 30 countries and presented at the 9th International Conference on Physical Modelling in Geotechnics 2018, City University of London, UK, 17-20 July 2018. The ICPMG series has grown such that two volumes of proceedings were required to publish all contributions. The books represent a substantial body of work in four years. Physical Modelling in Geotechnics contains 230 papers, including eight keynote and themed lectures representing the state of the art in physical modelling research in aspects as diverse as fundamental modelling, including sensors, imaging, modelling techniques and scaling; onshore and offshore foundations, dams and embankments, retaining walls and deep excavations, ground improvement and environmental engineering, tunnels and geohazards, including significant contributions in the area of seismic engineering. ISSMGE TC104 have identified areas for special attention, including education in physical modelling and the promotion of physical modelling to industry. With this in mind, there is a special themed paper on education focusing on both undergraduate and postgraduate teaching, as well as practicing geotechnical engineers. Physical modelling has entered a new era with the advent of exciting work on real-time interfaces between physical and numerical modelling and the growth of facilities and expertise that enable development of so-called megafuges of 1000-tonne capacity or more, capable of modelling the largest and most complex of geotechnical

challenges Physical Modelling in Geotechnics will be of interest to professionals engineers and academics interested or involved in geotechnics geotechnical engineering and related areas The 9th International Conference on Physical Modelling in Geotechnics was organised by the Multi Scale Geotechnical Engineering Research Centre at City University of London under the auspices of Technical Committee 104 of the International Society for Soil Mechanics and Geotechnical Engineering ISSMGE City University of London are pleased to host the prestigious international conference for the first time having initiated and hosted the first regional conference Eurofuge ten years ago in 2008 Quadrennial regional conferences in both Europe and Asia are now well established events giving doctoral researchers in particular the opportunity to attend an international conference in this rapidly evolving specialist area This is volume 2 of a 2 volume set *Recommendations of the Committee for Waterfront Structures Harbours and Waterways EAU 2012* HTG,2015-06-29 The EAU 2012 takes into account the new generation of standards which is shortly to be introduced into the building control system it consists of Eurocode 7 the associated national application documents and additional national regulations DIN 1054 2010 In certain cases partial safety factors are determined differently based on experience in practice This means that the safety standard of sea and port buildings remains in place the recommendations nevertheless satisfy the requirements for international recognition and application regarding the planning design specification tender procedure construction and monitoring as well as the handover of and cost accounting for port and waterway systems under uniform criteria

Seismic Evaluation and Rehabilitation of Structures Alper Ilki,Michael N. Fardis,2013-08-15 In the past facilities considered to be at the end of their useful life were demolished and replaced with new ones that better met the functional requirements of modern society including new safety standards Humankind has recently recognised the threats to the environment and to our limited natural resources due to our relentless determination to destroy the old and build anew With the awareness of these constraints and the emphasis on sustainability in future the majority of old structures will be retrofitted to extend their service life as long as feasible In keeping with this new approach the EU s Construction Products Regulation 305 2011 which is the basis of the Eurocodes included the sustainable use of resources as an Essential Requirement for construction So the forthcoming second generation of EN Eurocodes will cover not only the design of new structures but the rehabilitation of existing ones as well Most of the existing building stock and civil infrastructures are seismically deficient When the time comes for a decision to prolong their service life with the help of structural and architectural upgrading seismic retrofitting may be needed Further it is often decided to enhance the earthquake resistance of facilities that still meet their functional requirements and fulfil their purpose if they are not earthquake safe In order to decide how badly a structure needs seismic upgrading or to prioritise it in a population of structures a seismic evaluation is needed which also serves as a guide for the extent and type of strengthening Seismic codes do not sufficiently cover the delicate phase of seismic evaluation nor the many potential technical options for seismic upgrading therefore research is on going and the state of the art is constantly

evolving All the more so as seismic evaluation and rehabilitation demand considerable expertise to make best use of the available safety margins in the existing structure to adapt the engineering capabilities and techniques at hand to the particularities of a project to minimise disruption of use etc Further as old structures are very diverse in terms of their materials and layout seismic retrofitting does not lend itself to straightforward codified procedures or cook book approaches As such seismic evaluation and rehabilitation need the best that the current state of the art can offer on all aspects of earthquake engineering This volume serves this need as it gathers the most recent research of top seismic experts from around the world on seismic evaluation retrofitting and closely related subjects
