The Evolution of Death Stanley Shostak,2012-02-01 In *The Evolution of Death* the follow up to *Becoming Immortal* Combining Cloning and Stem Cell Therapy also published by SUNY Press Stanley Shostak argues that death like life can evolve Observing that literature philosophy religion genetics physics and gerontology still struggle to explain why we die Shostak explores the mystery of death from a biological perspective Death Shostak claims is not the end of a linear journey static and indifferent to change Instead he suggests the current efforts to live longer have profoundly affected our ecological niche and we are evolving into a long lived species Pointing to the artificial means currently used to prolong life he argues that as we become increasingly juvenilized in our adult life death will become significantly and evolutionarily delayed As bodies evolve the embryos of succeeding generations may be accumulating the stem cells that preserve and restore providing the resources necessary to live longer and longer If trends like this continue Shostak contends future human beings may join the ranks of other animals with indefinite life spans *Regenerative*

The California Institute for Regenerative Medicine Institute of Medicine,Board on Health Sciences Policy,Committee on a Review of the California Institute for Regenerative Medicine,2013-02-27 The California Institute for Regenerative Medicine CIRM was created in 2005 by The California Stem Cell Research and Cures Act Proposition 71 to distribute 3 billion in state funds for stem cell research The passage of Proposition 71 by the voters of California occurred at a time when federal funding for research involving human embryonic stem cells was uncertain given the ethical questions raised by such research During its initial period of operations

CIRM has successfully and thoughtfully provided more than 1.3 billion in awards to 59 California institutions consistent with its stated mission. As it transitions to a broadened portfolio of grants to stimulate progress toward its translational goals, the Institute should obtain cohesive longitudinal and integrated advice, restructure its grant application review process, and enhance industry representation in aspects of its operations. CIRM's unique governance structure, while useful in its initial stages, might diminish its effectiveness moving forward. The California Institute for Regenerative Medicine Science Governance and the Pursuit of Cures recommends specific steps to enhance CIRM's organization and management, as well as its scientific policies and processes, as it transitions to the critical next stages of its research and development program.
