Hawking, 1993 Stephen Hawking the Lucasian Professor of Mathematics at Cambridge University has made important theoretical contributions to gravitational theory and has played a major role in the development of cosmology and black hole physics Hawking's early work partly in collaboration with Roger Penrose showed the significance of spacetime singularities for the big bang and black holes His later work has been concerned with a deeper understanding of these two issues The work required extensive use of the two great intellectual achievements of the first half of the Twentieth Century general relativity and quantum mechanics and these are reflected in the reprinted articles Hawking's key contributions on black hole radiation and the no boundary condition on the origin of the universe are included The present compilation of Stephen Hawking's most important work also includes an introduction by him which guides the reader through the major highlights of the volume This volume is thus an essential item in any library and will be an important reference source for those interested in theoretical physics and applied mathematics It is an excellent thing to have so many of Professor Hawking's most important contributions to the theory of black holes and space time singularities all collected together in one handy volume I am very glad to have them Roger Penrose Oxford This was an excellent idea to put the best papers by Stephen Hawking together Even his papers written many years ago remain extremely useful for those who study classical and quantum gravity By watching the evolution of his ideas one can get a very clear picture of the development of

quantum cosmology during the last quarter of this century Andrei Linde Stanford This review could have been quite short The book contains a selection of 21 of Stephen Hawking's most significant papers with an overview written by the author This is Stephen Hawking Bernard Ryan, 2009 Describes the life and career of the famous British scientist Stephen Hawking *Brief Answers to the Big Questions* Stephen Hawking, 2018-10-16 1 NEW YORK TIMES BESTSELLER The world famous cosmologist and author of *A Brief History of Time* leaves us with his final thoughts on the biggest questions facing humankind Hawking's parting gift to humanity a book every thinking person worried about humanity's future should read NPR NAMED ONE OF THE BEST BOOKS OF THE YEAR BY Forbes The Guardian Wired Stephen Hawking was the most renowned scientist since Einstein known both for his groundbreaking work in physics and cosmology and for his mischievous sense of humor He educated millions of readers about the origins of the universe and the nature of black holes and inspired millions more by defying a terrifying early prognosis of ALS which originally gave him only two years to live In later life he could communicate only by using a few facial muscles but he continued to advance his field and serve as a revered voice on social and humanitarian issues Hawking not only unraveled some of the universe's greatest mysteries but also believed science plays a critical role in fixing problems here on Earth Now as we face immense challenges on our planet including climate change the threat of nuclear war and the development of artificial intelligence he turns his attention to the most urgent issues facing us Will humanity survive Should we colonize space Does God exist These are just a few of the questions Hawking addresses in this wide ranging passionately argued final book from one of the greatest minds in history Featuring a foreword by Eddie Redmayne who won an Oscar playing Stephen Hawking an introduction by Nobel Laureate Kip Thorne and an afterword from Hawking's daughter Lucy *Brief Answers to the Big Questions* is a brilliant last message to the world Praise for *Brief Answers to the Big Questions* Hawking is a symbol of the soaring power of the human mind The Washington Post Hawking's final message to readers is a hopeful one CNN Brisk lucid peeks into the future of science and of humanity The Wall Street Journal Hawking pulls no punches on subjects like machines taking over the biggest threat to Earth and the possibilities of intelligent life in space Quartz Effortlessly instructive absorbing up to the minute and where it matters witty The Guardian This beautiful little book is a fitting last twinkle from a new star in the firmament above The Telegraph *The New Celebrity Scientists* Declan Fahy, 2015-03-06 A new cultural icon strode the world stage at the turn of the twenty first century the celebrity scientist as comfortable in *Vanity Fair* and *Vogue* as Smithsonian Declan Fahy profiles eight of these eloquent controversial and compelling sellers of science to investigate how they achieved celebrity in the United States and internationally and explores how their ideas influence our understanding of the world Fahy traces the career trajectories of Richard Dawkins Stephen Hawking Steven Pinker Neil deGrasse Tyson Brian Greene Stephen Jay Gould Susan Greenfield and James Lovelock He demonstrates how each scientist embraced the power of promotion and popularization to stimulate thinking impact policy influence research drive controversies and mobilize social movements He also considers critical claims

Physics Education and Gender Allison J. Gonsalves, Anna T. Danielsson, 2020-04-24 This Edited Volume engages with concepts of gender and identity as they are mobilized in research to understand the experiences of learners teachers and practitioners of physics The focus of this collection is on extending theoretical understandings of identity as a means to explore the construction of gender in physics education research This collection expands an understanding of gendered participation in physics from a binary gender deficit model to a more complex understanding of gender as performative and intersectional with other social locations e g race class LGBT status ability etc This volume contributes to a growing scholarship using sociocultural frameworks to understand learning and participation in physics and that seeks to challenge dominant understandings of who does physics and what counts as physics competence Studying gender in physics education research from a perspective of identity and identity construction allows us to understand participation in physics cultures in new ways We are able to see how identities shape and are shaped by inclusion and exclusion in physics practices discourses that dominate physics cultures and actions that maintain or challenge structures of dominance and subordination in physics education The chapters offered in this book focus on understanding identity and its usefulness in various contexts with various learner or practitioner populations This scholarship collectively presents us with a broad picture of the complexity inherent in doing physics and doing gender

Black Holes: The Reith Lectures Stephen Hawking, 2016-05-05 It is said that fact is sometimes stranger than fiction and nowhere is that more true than in the case of black holes Black holes are stranger than anything dreamed up by science fiction writers In 2016 Professor Stephen Hawking delivered the BBC Reith Lectures on a subject that fascinated him for decades black holes In these flagship lectures the legendary physicist argued that if we could only understand black holes and how they challenge the very nature of space and
