successful in delivering more realistic television experience at home and accurate imaging for professional applications Adoption of high definition continues to grow as consumers demand enhanced features and greater quality of content Following this trend natural evolution of visualisation technologies will be in the direction of fully realistic visual experience and highly precise imaging However using the content of even higher resolution and quality is not straightforward as such videos require significantly higher access bandwidth and more processing power Therefore methods for radical reduction of video bandwidth are crucial for realisation of high visual quality Moreover it is desirable to look into other ways of accessing visual content solution to which lies in innovative schemes for content delivery and consumption This book presents selected chapters covering technologies that will enable greater flexibility in video content representation and allow users to access content from any device and to interact with it

3D Future Internet Media Ahmet Kondo, Tasos Dagiuklas, 2013-11-12 This book describes recent innovations in 3D media and technologies with coverage of 3D media capturing processing encoding and adaptation networking aspects for 3D Media and quality of user experience QoE The main contributions are based on the results of the FP7 European Projects ROMEO which focus on new methods for the compression and delivery of 3D multi view video and spatial audio as well as the optimization of networking and compression jointly across the Future Internet www.ict-romeo.eu The delivery of 3D media to individual users remains a highly challenging problem due to the large amount of data involved diverse network characteristics and

user terminal requirements as well as the user's context such as their preferences and location. As the number of visual views increases, current systems will struggle to meet the demanding requirements in terms of delivery of constant video quality to both fixed and mobile users. ROMEO will design and develop hybrid networking solutions that combine the DVB-T2 and DVB-NGH broadcast access network technologies together with a QoE-aware Peer-to-Peer (P2P) distribution system that operates over wired and wireless links. Live streaming 3D media needs to be received by collaborating users at the same time or with imperceptible delay to enable them to watch together while exchanging comments as if they were all in the same location. The volume provides state-of-the-art information on 3D multi-view video spatial audio networking protocols for 3D media P2P, 3D media streaming and 3D media delivery across heterogeneous wireless networks among other topics. Graduate students and professionals in electrical engineering and computer science with an interest in 3D Future Internet Media will find this volume to be essential reading.

Color in Electronic Display Systems Michael E. Miller, 2018-12-13. This book explores the principles, design and image processing of multi-primary displays and introduces the reader to the intricacies of the typical imaging pathways which influence display design and the perception of color within a display system. Early chapters introduce the concepts behind human perception, color science and lighting which are necessary to fully understand multi-primary displays. The reader is also introduced to digital capture and transmission systems to better understand the ecosystem in which multi-primary displays exist. Subsequent chapters introduce the reader to current display technologies including LCD, OLED and inorganic LED displays. The working principles, performance and upcoming advances are discussed for each of these technologies to provide the reader with a clear understanding of the tradeoffs which are necessary when considering multi-primary displays. This discussion is followed by an in-depth discussion of the image processing technology necessary to implement multi-primary displays. The book concludes with chapters that clearly discuss the advantages and limitations of multi-primary displays for direct view virtual reality and augmented reality displays. The book provides a broad viewpoint across the entire display ecosystem, explaining the interactions among system components to provide a rationale for the further development of multi-primary displays. Whether the reader is interested in broadening their understanding of display systems or the development of multi-primary displays, the text provides an understandable and practical summary of important display system concepts.
