Stereotactic Techniques in Clinical Neurosurgery D. Andries Bosch, 2012-12-06 Various textbooks on stereotactic neurosurgery have been published during the last few years Riechert 1980 Schaltenbrand and Walker 1982 Spiegel 1982 all of them dealing with functional stereo tactics as the major subject in the field Diagnostic and therapeutic stereotactic interventions are only briefly described whereas localization techniques are not yet mentioned Since 1980 however an increasing number of reports has been published on CT guided and computer monitored stereotactic performances which enable the surgeon to combine diagnostic and therapeutic efforts in one session With recent progress in scanning techniques including high resolution CT NMR and PET imaging of the brain it has become possible to study and localize any brain area of interest With the concomitant advances in computer technology 3 dimensional reconstruction of deep seated lesions in stereotactic space is possible and the way is open for combined surgery with stereotactic precision and computer guided open resection This type of open surgery in stereotactic space is already being developed in some centers with the aid of microsurgical fiberoptic and laser beam instrumentation With these advances stereotactic techniques will rapidly become integrated into clinical neurosurgery Stereotactics has become a methodology which enables the surgeon to attack deep seated and subcortical small tumors Neurosurgeons may abandon therapeutic nihilism still frequently seen in glioma treatment in the near future when stereotactic resection will be feasible and remaining tumor cells may be killed by adjuvant treatment modalities still in development *Official Gazette of the United States Patent and Trademark Office* United States. Barnett,2007-11-21 This is truly an exciting time in the field of neuro oncology particularly in the area of hi grade gliomas The management of patients with high grade gliomas has historically been one of the most challenging and disheartening fields in medicine where failure is the rule and longevity is the exception The jaded often state that despite purported advances in surgical and radiotherapeutic

techniques and a myriad of clinical trials of medical therapies the survival statistics for glioblastoma have not changed in the last three decades The nihilism associated with these tumors is such that some practitioners still advise against treatment or even biopsy recommending palliative care with the diagnosis based only on history and an MRI scan If the current state of the art in the diagnosis and management of high grade gliomas was truly so bleak there would be no reason to compile and publish a monograph on the subject The fact is that we have recently entered an era where real progress is being made in our understanding and treatment of high grade gliomas that is directly benefiting some patients We are slowly but surely chipping away at this problem One approach has exploited correlations between particular molecular markers and therapeutic response The first such breakthrough in high grade glioma was the observation that loss of chromosomes 1p and 19q uniformly predict chemosensitivity in anaplastic oligodendrogliomas 1
