

# Torsional and Steric Interactions

Torsional Strain

**Repulsion** between electrons in the bond destabilizes the eclipsed conformation of ethane.

Steric Strain

Interaction caused by large atoms/groups getting in each other's way.

- *Hydrogens are too small and it is the **bonding electrons** that **repel** each other (torsional strain).*
- *Methyl groups are large and, in addition to this torsional strain between each eclipsing bond, there is also a **steric interaction** between them.*

**Active Oxygen in Biochemistry** Valentine Angelou, 2013-03-09 The field of Oxygen Activation has attracted considerable interest recently not only because it presents challenges in those fields of basic research that aim to understand the fundamental aspects of chemical and biological reactions that involve dioxygen but also because of its wide range of practical implications in such diverse fields as medicine synthesis of pharmaceuticals and other organic compounds materials science and atmospheric science This is the second of two volumes that focus on the subject of oxygen activation the first slanted toward

chemistry and the second toward biological chemistry We planned these volumes to be more general than many monographs of this sort not as detailed summaries of the authors own research but rather as general overviews of the field Our choice of topics was strongly influenced by our syllabus for a course entitled Oxygen Chemistry which two of us have twice taught jointly at UCLA Definition of important issues horizons and future prospects was an important goal and although totally comprehensive coverage was not possible we believe that we have chosen a representative selection of research topics current to the field We have targeted this work to a diverse audience ranging from professionals in fields from physics to medicine to beginning graduate students who are interested in rapidly acquiring the basics of this field **Library of**

The transition state theory has been from the point of its inception the most influential principle in the development of our knowledge of reaction mechanisms in solution. It is natural that as the field of biochemical dynamics has achieved new levels of refinement its students have increasingly adopted the concepts and methods of transition state theory. Indeed every dynamical problem of biochemistry finds its most elegant and economical statement in the terms of this theory. Enzyme catalytic power for example derives from the interaction of enzyme and substrate structures in the transition state so that an understanding of this power must grow from a knowledge of these structures and interactions. Similarly transition state interactions and the way in which they change as protein structure is altered constitute the pivotal feature upon which molecular evolution must turn. The complete coupled dynamical system of the organism incorporating the transport of matter and energy as well as local chemical processes will eventually have to yield to a description of its component transition state structures and their energetic response characteristics even if the form of the description goes beyond present day transition state theory. Finally the importance of biochemical effectors in medicine and agriculture carries the subject into the world of practical affairs in the use of transition state information for the construction of ultra potent biological agents.

**Biochemical Pharmacology** Michael Palmer, 2012-03-27 Biochemical abnormalities play a key role in human illness. To pinpoint effective curative solutions biochemical pharmacologists use drugs to discover new information about biosynthetic pathways and their kinetics. Using a more chemistry and mechanism oriented approach than standard pharmacology books *Introduction to Biochemical Pharmacology* is a one stop reference that focuses on how a drug interacts with a target receptor or enzyme at the molecular level. Learning is reinforced through the use of end of chapter exercises, PowerPoint slides and a problem and solutions manual. Provided by publisher.
