A Temperament Theory of Personality Development Arnold H. Buss, Robert Plomin, 1975      **The Study of Temperament** Robert Plomin, Judy Dunn, 2013-08-21 First Published in 1986 The modern history of temperament research began in the late 1950s with the New York Longitudinal Study Twenty five years later temperament has become a major focus of research on early developing emotional and social traits The impetus for this growth in temperament research stems from the merging of several shifts in child development research from a view of the child as passive to a model of the child as an active transacting partner with the environment increasing interest in individual differences in development an expansion of research on emotional and social development and a clear change from an exclusive reliance on environmental explanations of developmental differences to a more balanced perspective that recognizes the possibility of biological as well as environmental influences Most stimulating is the multidisciplinary flavor of temperament research clinicians infancy researchers cultural anthropologists and behavioral geneticists have each for their own reasons been drawn to the study of temperament Each of these fields is represented in the present volume which provides the first overview of the growing field of temperament      **A temperament theory of personality development** Robert Joseph Plomin, 1974      **A Temperament Theory of Personality Development** Robert Plomin, 1974      *Handbook of Temperament* Marcel Zentner, Rebecca L. Morrison, 2012-12-06 For some time now the study of cognitive development has been far and away the most active discipline within developmental psychology Although there would be much disagreement as to the exact proportion of papers published in developmental journals that could be considered cognitive 50% seems like a conservative estimate Hence a series of scholarly books devoted to work in cognitive development is especially appropriate at this time The Springer Series in Cognitive Development contains two basic types of books namely edited collections of original chapters by several authors and original volumes written by one author or a small group of authors The flagship for the Springer Series is a serial publication of the advances type carrying the subtitle Progress in Cognitive Development Research Each volume in the Progress sequence is strongly thematic in that it is limited to some well defined domain of cognitive developmental research e.g. logical and mathematical development development of learning All Progress volumes will be edited collections Editors of such collections upon consultation with the Series Editor may elect to have their books published either as contributions to the Progress sequence or as separate volumes All books written by one author or a small group of authors are being published as separate volumes within the series
