Temperature Animal Life

Sir Kenneth Lyon Blaxter

Temperature Animal Life:

Animal Life at Low Temperature John Davenport, 2012-12-06 To humans cold has a distinctly positive quality Frostbite a nip in the air biting cold all express the concept of cold as an entity which attacks the body numbing and damaging it in the process Probably the richness of descriptive English in this area stems from the early experiences of a group of essentially tropical apes making their living on a cold and windswept island group half way between the Equator and the Arctic During a scientific education we soon learn that there is no such thing as cold only an absence of heat Cold does not invade us heat simply deserts Later still we come to appreciate that temperature is a reflection of kinetic energy and that the quantity of kinetic energy in a system is determined by the speed of molecular movement Despite this realization it is difficult to abandon the sensible prejudices of palaeolithic Homo sapiens shivering in his huts and caves For example appreciating that a polar bear is probably as comfortable when swimming from ice floe to ice floe as we are when swimming in the summer Mediterranean is not easy understanding the thermal sensations of a cold blooded earthworm virtually impossible We must always be wary of an anthropocentric attitude when considering the effects of cold on other species Temperature and Animal Life Richard N. Hardy, 1972 **Animal Physiology** Knut Schmidt-Nielsen, 1997-04-10 How do dolphins catch fish in murky water Why do moths drink from puddles How do birds eggs breathe How do animals work In this revised and updated edition of the acclaimed text Animal Physiology the answers are revealed In clear and stimulating style Knut Schmidt Nielsen introduces and develops the fundamental principles of animal physiology according to major environmental features oxygen food and energy temperature and water The structure of the book is unchanged from the previous edition but every chapter has been updated to take into account recent developments with numerous new references and figures Animal Physiology is suitable as a text for undergraduate and beginning graduate courses in physiology As with previous editions students teachers as well as researchers will find this book a valuable and enjoyable companion to course work and research The Natural Conditions of Existence as They Affect Animal Life Carl Semper, 2025-09-21 Reprint of the original first published in 1883 The Antigonos publishing house specialises in the publication of reprints of historical books We make sure that these works are made available to the public in good condition in order to preserve their cultural heritage Animal Life as Affected by the Natural Conditions of Existence Carl Semper, 1881 **The Natural Conditions of Existence as They Affect Animal Life** Carl Semper, 1881 Animal Life DK Publishing, 2011-01-17 If you think that watching all the nature programs on television qualifies you as an expert on the subject think again Do you really know what makes animals tick Here are the answers portrayed in stunning awe inspiring action sequences and explained in fascinating in depth prose Thematically arranged by behavior trait Animal Life explores and explains every aspect of animal behavior including courtship rituals and sex lives family relationships and defense mechanisms hunting techniques and feeding habits Side panels explore some of the field research on animal behavior and explain important conservation issues The introductory

McNeill Alexander, 1999-01-28 The Oxford Animal Biology Series is an innovative new series of supplementary undergraduate texts in comparative animal biology Topics within each book are addressed using examples from throughout the animal kingdom looking for parallels that transcend taxonomy Further reading sections will guide the student into the literature at greater depth The series will be international in scope both in terms of the species used as examples and in references to scientific work Energy for Animal Life the first book in the series is about how animals get energy and how they use it a central topic in our understanding of animal biology Life depends on energy and much of the activity of animals is devoted to getting the food which is their energy source It encompasses the food chain from solar radiation and photosynthesis to food sources for herbivores and for carnivores and compares the merits of different designs of digestive system and of different strategies for finding and choosing food Of course animal energy isn't simply a question of feeding and several chapters in turn look at energy use The energy costs of motion of running swimming and flight are discussed in one chapter and the energetic demands of growth and reproduction in another A chapter on body temperature shows how the processes of life go faster at higher temperatures and discusses how animals regulate their temperature A final chapter draws all of these aspects of energy use together and considers the energy budgets of several different animals assessing the different energy gains and costs of their everyday activities in the wild The book is truly comparative drawing on examples from a wide range of animal species and lots of practical information on relevant experiments is included The style is very accessible and suitable as supplementary reading for first and second year undergraduates taking a degree course in biological sciences

Animal Life in Fresh Water Helen Mellanby, 2012-12-06 by Professor L E Eastham

Formerly Professor of Zoology in the University of Sheffield Most books are written with the intention of supplying some particular need but few end with such single purpose Mrs Mellanby's is no exception for while the author planned this work to serve as a guide to the school pupil which function it fulfils in an admirable way it will also prove of value to the teacher the university student and the amateur naturalist While it may be argued that it is not the function of the Universities to teach Natural History in the commonly accepted sense it will always be the aim of Zoologists to know more about animals what they are and do where they live and why they live in particular environments It is unfortunate in view of the fact that the majority of students of Zoology enter the teaching profession that the increasing load of instruction in morphology physiology cytology genetics evolution and the like frequently makes a personal study of animal life in relation to environment almost impossible The fortunate ones visit the sea for a fortnight's course in Marine Ecology the others take posts in schools without even this respite and set about converting their academic learning to a school curriculum The result is an undesirable and often slavish imitation of university method in the school class room
