## **Temporal Codes For Memories Issues And Problems:**

Temporal Codes for Memories (PLE: Memory) Benton Underwood, 2014-05-09 Given two events both of which are well remembered can we specify which event occurred first If so how For example did Nixon resign before or after Billie Jean King beat Bobby Riggs Originally published in 1977 little was known about the accuracy of temporal codes for memories and still less about the nature of the codes This volume addresses the central question of the mechanisms by which order information is attached to memories The results of sixteen previously unpublished experiments indicate the role of some independent variables on temporal coding in relatively short term memory and in long term memory Several experiments in which changes in proactive inhibition are used as an index of temporal differentiation show that the nature of the words making up the lists is involved fundamentally in temporal coding Other experiments demonstrate that in relatively short term memory a subject cannot learn to improve his performance in estimating how far apart in time two events occurred Still other experiments show that recency judgments for two events improve with practice but the improvement is independent of the temporal separation The context in which memories are established is shown to influence temporal codes only if an ordering metric is part of the context The author advances several theoretical propositions to account for the various findings In doing so he has given initial structuring for subsequent research to a neglected area This volume will still be of significant interest to all those interested in learning and memory **Temporal Codes for Memories** Benton J.

**Temporal Codes for Memories** B. J. Underwood, 1977-04-01 Coding of temporal relations in semantic memory  
Frank Krüger, Resources in Education ,1977 Psychologické studie ,1980 The Decline and Fall of Hemispheric

Specialization Robert Efron,2013-06-17 Providing a personal overview of hemispheric differences in human cognitive activity Professor Efron is selective in his presentation of significant issues To ensure a balanced overview references are made to many books review articles and research reports that present opposing positions Although additional material has been included in this book the informal style of the oral presentation has not been altered This volume may be perceived as a report of one man s opinion however the conclusions may reflect the views of a silent majority of cognitive neuroscientists

**Cognitive Models of Psychological Time** Richard A. Block,2014-01-14 This volume critically reviews cognitive models of psychological time in order to clarify and enrich what is known about the temporal aspects of cognitive processes Concentrating on how adult humans experience remember and construct time chapters survey recent work on such topics as mental representations of time timing in movement sequences time and timing in music and the processing of temporal information Also included are chapters with a broader perspective such as the impacts of methodological choices chronobiology and temporal experience a comparative approach to time and order and normal and abnormal temporal perspectives The book makes current research and theories on the psychology of time more accessible to researchers in cognitive psychology

**Behavior & Society** ,1977

The Foundations of Remembering James S. Nairne,2011-12-06 The Foundations of Remembering presents a collection of essays written by top memory scholars in honor of Henry L Roediger III The chapters were originally delivered as part of the Roddyfest conference held in March 2005 to celebrate Purdue University s awarding of an honorary doctor of letters to Roediger in recognition of his many contributions to the field of psychology Authors were given a simple charge choose your own topic but place your work in historical context Roediger is fascinated by the intellectual lineage of ideas so addressing historical foundations seemed a fitting tribute The Chapters contained in this volume help to establish the foundations of remembering circa the first decade of the 21st century as perceived by some of the leading memory researchers in the world Not surprisingly each of the chapters touches on Roediger s research as well largely because his work has helped to define and clarify many topics of interest to the memory field The Foundations of Remembering is intended for a wide audience students scholars and anyone interested in exploring the historical and conceptual roots of modern memory theory

Time: A Bibliographic Guide Samuel L. Macey,2018-10-10 Originally published in 1991 A multidisciplinary guide in the form of a bibliography of selected time related books and articles divided into 25 existing academic disciplines and about 100 subdisciplines which have a wide application to time studies

Stories, Scripts, and Scenes J. M. Mandler,2014-01-14 First published in 1984 This book is an expansion of three lectures on schema theory given at the University of Alberta in the fall of 1983 as part of the MacEachran Memorial Lecture Series

*The Symbolic Foundations of Conditioned Behavior* Charles R. Gallistel,John Gibbon,2002-03-01 The goal of this book is to persuade students of animal learning that cognitive theorizing is essential for an understanding of the phenomena revealed by conditioning experiments The authors also hope to persuade the cognitive psychology community that

conditioning phenomena offer such a strong empirical foundation for a rigorous brand of cognitive psychology that the study of animal learning should reclaim a more central place in the field of psychology      **The Time Dimension** T K.

Das,1990-04-17 This is the first comprehensive bibliography of temporal scholarship research on the subject of time and the phenomenon of time itself As the author notes in his introduction the nature of research insights on the subject of time is difficult to comprehend within the confines of any specific discipline since relevant materials are scattered throughout the literature in numerous scholarly fields By bringing together the most significant published works in a wide variety of disciplines this unique compendium enables scholars and researchers to look beyond their own particular area of expertise when selecting appropriate resource materials Throughout the focus is on the time dimension itself as a problematic or researchable phenomenon rather than on narrow topics such as time management time series analysis or forecasting Organized by discipline the work begins with an initial chapter that lists general works on the time dimension Nineteen chapters then list works in particular disciplines ranging from anthropology and culture to biology economics futures studies history linguistics management studies psychology and more The final chapter lists miscellaneous entries which could not be categorized into any of the specific disciplinary headings Within each chapter entries are arranged alphabetically by author or editor Nearly all sources are from scholarly journals and books      **The Neurobiological Basis of Memory** Pamela A.

Jackson,Andrea A. Chiba,Robert F. Berman,Michael E. Ragozzino,2015-09-19 This exciting volume offers an up to date tour of current trends in the neurobiology of memory while saluting Raymond Kesner s pioneering contributions to the field as a theorist and researcher teacher and mentor Starting with his signature chapter introducing the Attribute Model of Memory the first half of the book focuses on the central role of the hippocampus in processing dimensions of space and time and branches out to memory system interactions across brain structures Later chapters apply the attribute model to multiple functions of memory in learning and to specific neurological contexts including Huntington s disease traumatic brain injury and Fragile X As a bonus the book concludes with an essay on Kesner s life and work and reminiscences by colleagues Among the topics covered How the hippocampus supports the spatial and temporal attributes of memory Self regulation of memory processing centers of the brain Multiple memory systems the role of Kesner s Attribute Model in understanding the neurobiology of memory Pattern separation a key processing deficit associated with aging Prefrontal cortex and basal ganglia attributes underlying behavioral flexibility Memory disruption following traumatic brain injury Cognitive neuroscientists neuropsychologists gerontologists psychiatrists and neurobiologists will find *The Neurobiological Basis of Memory* both enlightening and inspiring much like Kesner himself      *Psychology of Learning and Motivation* ,1996-10-28 The *Psychology of Learning and Motivation* publishes empirical and theoretical contributions in cognitive and experimental psychology ranging from classical and instrumental conditioning to complex learning and problem solving Each chapter provides a thoughtful integration of a body of work Volume 35 covers spatial working memory memory for asymmetric events distance

and location processes in memory category learning and visual spatial attention      Time, Mind, and Behavior John A. Michon, Janet L. Jackson, 2012-12-06 This book is the result of the International Workshop on Time Mind and Behavior which was held at the University of Groningen in September 1984 The aim of the workshop was to produce an up to date review of the state of the art in the field of time psychology The rapid development of a cognitive outlook in experimental psychology has among other things underlined the need for a reconsideration of time experience the coding and representation of temporal information and the timing of complex responses Since the publication of Paul Fraisse's classical *Psychologie du Temps* in 1957 time psychology has slowly but steadily drawn an increasing amount of attention to a point where it now seems to be incorporated into the mainstream of research At the same time a noticeable tendency for a renewed general interest in time can also be traced in several other disciplines These two observations supported our belief that it was time for a review of the sort we had in mind At the close of 1983 we completed a project supported by the Dutch Organization for the Advancement of Pure Research in which we had studied the coding and retrieval of temporal information This provided us with a plausible pretense for organizing a workshop Around Christmas time 1983 we were able to mail a preliminary invitation to a number of our colleagues whom we knew to be currently active in the field      Brain Plasticity and Behavior Bryan Kolb, 2013-06-17 There are few books devoted to the topic of brain plasticity and behavior Most previous works that cover topics related to brain plasticity do not include extensive discussions of behavior The first to try to address the relationship between recovery from brain damage and changes in the brain that might support the recovery this volume includes studies of humans as well as laboratory species particularly rats The subject matter identifies a consistent correlation between specific changes in the brain and behavioral recovery as well as various factors such as sex and experience that influence this correlation in consistent ways Evolving from a series of lectures given as the McEachran Lectures at the University of Alberta this volume originally began as a summary of the lectures but has expanded to include more background literature allowing the reader to see the author's biases assumptions and hunches in a broader perspective In writing this volume the author had two goals in mind to initiate senior undergraduates or graduate psychology biology neuroscience or other interested students to the issues and questions regarding the nature of brain plasticity and to provide a monograph in the form of an extended summary of the work the author and his colleagues have done on brain plasticity and recovery of function      **The Self and Memory** Denise R. Beike, James M. Lampinen, Douglas A. Behrend, 2004-11-01 Noted scholars from a broad range of sub disciplines in psychology discuss the ways in which the memories of our lives come to influence who we are our personalities and our emotional functioning Other topics covered include how our personalities and self concepts influence what we remember from our lives and the notion of memory and the self as interdependent psychological phenomena      *Memory from a Broader Perspective* Alan Searleman, Douglas J. Herrmann, 1994
