The Night House Danielle Dulsky, 2025-03-25 Fairy tales are more than mere bedtime stories they are living breathing repositories of ancient wisdom and magick In The Night House bestselling author and word witch Danielle Dulsky peels back the layers of these timeless narratives to reveal their potent role as guides for navigating today's world Historically kept and passed on by women fairy tales are distinguishable from other types of folk tales by their supernatural elements and because of this they were often dismissed as trivial fantasies for women and children Danielle illuminates how this marginalization kept these stories safe from the witch hunter's noose and allowed women to safely store and transmit their sacred age old wisdom for new generations to uncover and explore Her fresh and relevant commentary will support your kinship with the Earth ancestors and your own living myth The Night House shows how a single fairy tale is actually a treasure box of coded knowledge and magickal practice that has remained largely intact preserved under the floorboards of the Yaga's hut for us to find

Human Nature Stephen Gislason,2017-07-05 Preface Being a human is challenging Human life is a journey thorough time and space with many obstacles injury disease constant uncertainty and relentlessly difficult interactions with other humans Each human is the reincarnation of a long lineage of ancestors Species memory perceptual skills needs drives feelings desires and behaviors are built in and begin operating in utero Humans evolved from primate ancestors and retained features of mind and behavior that have been present in animals for hundreds of millions of years Urges desires designs feelings cry out from within and often surprise us as if we were the hosts to wild animals and spirits within that refuse to be identified or tamed Human behavior can be understood in relation to the whole spectrum of primate behaviors and social organizations Humans appear to have an eclectic combination of primate tendencies with elaboration of features such as tool making symbolic reasoning and spoken language Linda Stone suggested that Primates are a natural grouping of mammals that includes prosimians tree dwelling animals such as lemurs and tarsiers monkeys apes and humans Some of the physical characteristics that distinguish primates from other mammals are binocular vision and the grasping hand with mobile digits and flat nails Evolutionary trends characteristic of the Primate Order are most pronounced in humans and include prolongation of gestation of the fetus prolongation of the period of infant care and expansion and elaboration of the brain An important feature in the social life of many nonhuman primates is dominance and the formation of dominance hierarchies a dominant animal wins aggressive encounters with others and usually has greater access to resources such as food water or sexual partners Rather than viewing society and culture as real things an observer can recognize that humans live in groups that repeat and modify innate behaviors to produce prolific variations on a few underlying themes that are common to all societies A smart observer will consider the grouping characteristics of humans and discern basic patterns and problems underlying the apparent complexity of modern civilization The organization of society begins with small local clusters that link family groups into clans that are more or less cooperative units Clans associate forming bands that tend to affiliate with other bands forming tribes looser affiliations that occupy larger geographic areas The band tribal structure emerges from ancient animal groupings Patterns of organization rules and institutions that regulate human behavior are in flux and will continue to be unstable As human populations expand and interactions become increasingly complex innate abilities are stretched and distorted The ability of individuals to relate to other humans remains limited and limits the effective management of enlarging groups Managers and leaders do not become smarter as the organizations they lead become larger It is axiomatic that organizations that exceed a threshold number become dysfunctional It is matter of empirical study to recognize group size thresholds and too little is known about the cognitive limitations of leaders
