Termites and heritage buildings Brian Ridout, 2023-04-01 The last overview of termites for the non specialist was published several decades ago and in the intervening years both knowledge and the termites themselves have moved on A 27 year eradication effort for one termite infestation in Devon has shown that UK structures are becoming vulnerable as the climate changes and also that extermination of a colony can be difficult even when there are no other termites waiting to invade Heritage buildings often present even more problems Survey work and treatments may be complicated by structural and material complexity overlain with a requirement to retain as much undisturbed and original fabric as possible There will be concealed cavities not inspected and inserted barriers both chemical and physical will inevitably be incomplete This study discusses the modifiable environmental parameters that govern termite activity and offers a resume of the baits and chemical treatments that have been developed so that the most appropriate can be selected where necessary It is primarily intended for those involved in conservation both in the UK and elsewhere who commonly have limited resources It is hoped that it will also be of use to architects surveyors and others with an interest in Heritage structures

Sundararaj, 2022-03-16 This edited book covers all aspects of wood degradation from its formation and growing in trees to its end usages when it is put into human usage Wood is an age old traditional fascinating material with a sensory rich immersive experience that kindles aesthetics and creativity The utility durability and functionality of wood render it a cosmopolitan material It constitutes an integral part of human lives from ancient times to modern societies being

used by various sectors viz construction furniture panel products paper and pulp sports goods agricultural implements etc Wood being a biological material is susceptible to degradation both by physical and biological means and the need to protect the wood and prevent heavy economic losses constitutes a major challenge Also wood formed by the trees is the major sinks of carbon and the carbon remains locked up for the life of the wood thereby serving as important tool to mitigate the climate change But the carbon stored in wood returns to the atmosphere when it degrades and will have positive effect on climate change Hence wood protection aiming for extending the service life of wood plays a key role in locking the carbon for a longer period in the wood and also substantially reduce the demand and depletion of forest resources The book focuses on wood as an important natural bio resource inventory of wood protection usage utilization preservatives protection technologies and wood protection from all forms of degradation Special focus is given on the eco friendly way of protecting wood and its importance in mitigating climate change The book is useful for Indian and international readers who are working in wood domains It is of interest to wood technologists teachers researchers climate change scientists capacity builders and policymakers It is of immense importance as a guide and study material to the graduate and postgraduate students of wood science in various universities of India and abroad
