The Earth Observer ,1990 **Advances in the Use of NOAA AVHRR Data for Land Applications** Giles D'Souza,Alan S. Belward,Jean-Paul Malingreau,2013-11-11 An up to date detailed set of notes covering all aspects of NOAA AVHRR data collection pre processing analysis and application Includes many FTP sites e mail addresses and URL locations Some chapters address particular aspects of the NOAA AVHRR system such as radiometric calibration and geometric correction while others provide general information of interest to any remote sensing study such as radiative transfer modelling and atmospheric correction The publication of a book that covers all important aspects of the treatment and understanding of the data in one volume makes the work a convenient informative recipe book that is sure to become a favourite for all users of NOAA AVHRR data **Geo-information for Disaster Management** Peter van Oosterom,Siyka Zlatanova,Elfriede Fendel,2006-02-28 Geo information technology offers an opportunity to support disaster management industrial accidents road collisions complex emergencies earthquakes fires floods and similar catastrophes for example the recent huge disaster with the Tsunami in South East Asia on 26 December 2004 Access to needed information facilitation of the interoperability of emergency services and provision of high quality care to the public are a number of the key requirements Such requirements pose significant challenges for data management discovery translation integration visualization and communication based on the semantics of the heterogeneous geo information sources with differences in many aspects scale resolution dimension 2D or 3D classification and attribute schemes temporal aspects up to date ness history predictions of the future spatial reference system used etc The book provides a broad overview of the geo information technology software systems needed used and to be developed for disaster management The book provokes a wide discussion on systems and requirements for use of geo information under time and stress constraints and unfamiliar situations environments and circumstances **Companion Encyclopedia of Geography** Ian Douglas,Mike Robinson,1996

Companion Encyclopedia of Geography Prof Ian Douglas,Ian Douglas,Richard John Hugget,Mike

Robinson,2003-09-01 The Companion Encyclopedia of Geography provides an authoritative and provocative source of reference for all those concerned with the earth and its people Examining both physical and human geography and charting human activities within their habitat up to the present day this Companion also asks what lies in the future A differentiated world A world transformed by the growth of a global economy The global scale of habitat modification A world of questions Changing worlds changing geographies Geographical futures The forty five self contained chapters are bound into a unifying whole by the editors general and part introductions each chapter provides details of the most useful sources of further reading and research and the volume is concluded with a comprehensive index This is an invaluable resource not only for students teachers and researchers in the academic domain but also professionals in interested commercial and public sector organisations **Digital Remote Sensing** Prithvish Nag,M. Kudrat,1998 Computer Processing of Remotely-Sensed Images Paul M. Mather,Magaly Koch,2022-04-06 Computer Processing of Remotely Sensed Images A thorough introduction to computer processing of remotely sensed images processing methods and applications Remote sensing is a crucial form of measurement that allows for the gauging of an object or space without direct physical contact allowing for the assessment and recording of a target under conditions which would normally render access difficult or impossible This is done through the analysis and interpretation of electromagnetic radiation EMR that is reflected or emitted by an object surveyed and recorded by an observer or instrument that is not in contact with the target This methodology is particularly of importance in Earth observation by remote sensing wherein airborne or satellite borne instruments of EMR provide data on the planet s land seas ice and atmosphere This permits scientists to establish relationships between the measurements and the nature and distribution of phenomena on the Earth s surface or within the atmosphere Still relying on a visual and conceptual approach to the material the fifth edition of this successful textbook provides students with methods of computer processing of remotely sensed data and introduces them to environmental applications which make use of remotely sensed images The new edition s content has been rearranged to be more clearly focused on image processing methods and applications in remote sensing with new examples including material on the Copernicus missions microsatellites and recently launched SAR satellites as well as time series analysis methods The fifth edition of Computer Processing of Remotely Sensed Images also contains A cohesive presentation of the fundamental components of Earth observation remote sensing that is easy to understand and highly digestible Largely non technical language providing insights into more advanced topics that may be too difficult for a non mathematician to understand Illustrations and example boxes throughout the book to illustrate concepts as well as revised examples that reflect the latest information References and links to the most up to date online and open access sources used by students Computer Processing of Remotely Sensed Images is a highly insightful textbook for advanced undergraduates and postgraduate students taking courses in remote sensing and GIS in Geography Geology and Earth Environmental Science departments Global Developments in Environmental Earth Observation from Space
