Weick, Jan-Hendrik Becking, 2009-01-01 Owls are enduringly popular birds but due to their nocturnal habits most species are difficult to see well. The plumages of many species are cryptic and difficult to separate by plumage alone. This problem is compounded by the different morphs that many adopt. This book fully describes every known species and subspecies of owl as well as presenting the latest evidence on owl taxonomy based on DNA work and vocalisations. Because voice is vital in owl identification much emphasis is placed on it in the book and sonograms are provided for many species. A CD of owl vocalisations will accompany the book.

Finding Birds in Australia's Northern Territory D Donato, P Wilkins, G Smith, L Alford, 1997-07-01 Birds are a prominent feature of the Northern Territory environment with almost half of Australia's bird species found there in spectacular landscapes ranging from deserts to tropics. This guide will lead you to the Northern Territory's best birdwatching areas and help you find the birds. It is designed to be used in conjunction with one of the Australian field identification guides. The book has four main sections: habitats, areas, special birds, and a checklist. The text does not discuss every bird likely to be found in every area; instead, it points out interesting species found at each site. The special birds section covers birds considered to be special to the Northern Territory and includes tips on finding the birds and local identification hints.

Munias and Mannikins Robin Restall, 2010-08-30 This book covers 43 species of munias and mannikins. Munias are widespread throughout the Old World's tropical regions. In their natural habitat they are birds of the savanna but they have adapted to a number of different habitats including areas inhabited by humans. They range in size from the Java sparrow which is about the size of a common starling to the diminutive Madagascar mannikin. Their striking plumage makes them popular as cagebirds and they breed readily in captivity. The author has recently described one new species and ten new subspecies to science.
