Magnetotails in the Solar System Andreas Keiling,Caitríona Jackman,Peter Delamere,2015-02-02 All magnetized planets in our solar system Mercury Earth Jupiter Saturn Uranus and Neptune interact strongly with the solar wind and possess well developed magnetotails It is not only the strongly magnetized planets that have magnetotails Mars and Venus have no global intrinsic magnetic field yet they possess induced magnetotails Comets have magnetotails that are formed by the draping of the interplanetary magnetic field In the case of planetary satellites moons the magnetotail refers to the wake region behind the satellite in the flow of either the solar wind or the magnetosphere of its parent planet The largest magnetotail of all in our solar system is the heliotail the magnetotail of the heliosphere The variety of solar wind conditions planetary rotation rates ionospheric conductivity and physical dimensions provide an outstanding opportunity to extend our understanding of the influence of these factors on magnetotail processes and structures Volume highlights include Discussion on why a magnetotail is a fundamental problem of magnetospheric physics Unique collection of tutorials on a large range of magnetotails in our solar system In depth reviews comparing magnetotail processes at Earth with other magnetotail structures found throughout the heliosphere Collectively Magnetotails

in the Solar System brings together for the first time in one book a collection of tutorials and current developments addressing different types of magnetotails As a result this book should appeal to a broad community of space scientists and it should also be of interest to astronomers who are looking at tail like structures beyond our solar system *The Dynamical Ionosphere* Massimo Materassi,Biagio Forte,Anthea J. Coster,Susan Skone,2019-11-28 The Dynamical Ionosphere A Systems Approach to Ionospheric Irregularity examines the Earth s ionosphere as a dynamical system with signatures of complexity The system is robust in its overall configuration with smooth space time patterns of daily seasonal and Solar Cycle variability but shows a hierarchy of interactions among its sub systems yielding apparent unpredictability space time irregularity and turbulence This interplay leads to the need for constructing realistic models of the average ionosphere incorporating the increasing knowledge and predictability of high variability components and for addressing the difficulty of dealing with the worst cases of ionospheric disturbances all of which are addressed in this interdisciplinary book Borrowing tools and techniques from classical and stochastic dynamics information theory signal processing fluid dynamics and turbulence science The Dynamical Ionosphere presents the state of the art in dealing with irregularity forecasting ionospheric threats and theoretical interpretation of various ionospheric configurations Presents studies addressing Earth s ionosphere as a complex dynamical system including irregularities and radio scintillation ionospheric turbulence nonlinear time series analysis space ionosphere connection and space time structures Utilizes interdisciplinary tools and techniques such as those associated with stochastic dynamics information theory signal processing fluid dynamics and turbulence science Offers new data driven models for different ionospheric variability phenomena Provides a synoptic view of the state of the art and most updated theoretical interpretation results and data analysis tools of the worst case behavior in ionospheric configurations

Pitts,1990 *Intratextuality and Latin Literature* Stephen J. Harrison,Stavros Frangoulidis,Theodore D. Papanghelis,2018-10-08 Recent years have witnessed an increased interest in classical studies in the ways meaning is generated through the medium of intertextuality namely how different texts of the same or different authors communicate and interact with each other Attention although on a lesser scale has also been paid to the manner in which meaning is produced through interaction between various parts of the same text or body of texts within the overall production of a single author namely intratextuality Taking off from the seminal volume on Intratextuality Greek and Roman Textual Relations edited by A Sharrock H Morales Oxford 2000 which largely sets the theoretical framework for such internal associations within classical texts this collective volume brings together twenty seven contributions written by an international team of experts exploring the evolution of intratextuality from Late Republic to Late Antiquity across a wide range of authors genres and historical periods Of particular interest are also the combined instances of intra and intertextual poetics as well as the way in which intratextuality in Latin literature draws on reading practices and critical methods already theorized and operative in Greek antiquity **Special Report** ,1966
