Odor Sensation and Memory

Trygg Engen, 1991-11-21 Our sense of smell as Trygg Engen reminds us early in this definitive work has been neglected as a research area This neglect belies the very critical role that the sense plays in human adaptation to the environment through the monitoring of odors Smell is learned through experience and results Engen maintains in a schema of memory system that enables individuals to process and categorize odors There are closer relationships between the individual detecting an odor the circumstances or environment and the reaction of pleasure or aversion than with the other senses When future occasions present the same or similar odors memory will bring back the early experience and directly affect the reaction to the new stimuli Engen sees odor perception as mainly psychological unlike the traditional approach which sees the sense largely as an innate mechanism with a direct physiological basis The research underlying this book is the most current in sensory cognition reminding the reader of the importance of the sense of smell through examples of what deprivation entails The author develops an appreciation of the odor sensing ability mankind has and explores the uses to which that sense is applied The ability to relate past to present perception odor memory and the gradations of odor impact

The Smell of Slavery Andrew Kettler, 2020-05-28 In the Atlantic World different groups were aromatically classified in opposition to other ethnic gendered and class assemblies due to an economic necessity that needed certain bodies to be defined as excremental which culminated in the creation of a progressive tautology that linked Africa and waste through a conceptual hendiadys born of capitalist licentiousness The African subject was defined as a scented object appropriated as filthy to create levels of ownership through discourse that marked African peoples as unable to access spaces of Western modernity Embodied cultural knowledge was potent enough to alter the biological function of the five senses to create a European olfactory consciousness made to sense the African other as foul Fascinating informative and deeply researched The Smell of Slavery exposes that concerns with pungency within the Western self were emitted outward upon the freshly dug outhouse of the mass slave grave called the Atlantic World
