Recent Trends in Cold Formed Steel Construction Second Edition focuses on the application and use of this important construction material. In this updated edition, new chapters take on these developments, offering updates on cutting edge new technologies and design methods for using cold formed steel as a structural material and providing technical guidance on how to design and build sustainable and energy efficient cold formed steel buildings. Sections introduce codes, specifications and design methods, provide computational analysis of cold formed steel structures, examine the structural performance of cold formed steel buildings and review thermal performance, acoustic performance, fire protection, floor vibrations and blast resistance. Over the last few years, there have been major breakthroughs for cold formed steel design with modular building applications now becoming more widely accepted. Other scientific developments include research on system reliability, applications of AI, machine learning and the use of high strength steel as well as new connection methods and changes in DSM codes. Addresses building science issues and provides performance solutions for the design of cold formed steel buildings. Provides guidance for using next generation design methods, computational tools and technologies. Edited by an experienced researcher and educator with significant knowledge on new developments in cold formed steel construction. Covers new developments such as modular construction, machine learning and code developments in Europe, Australia and China.

Structural Analysis of Historical Constructions: Anamnesis, diagnosis, therapy, controls contains the papers presented at the 10th International Conference on Structural Analysis of Historical Constructions SAHC2016 Leuven, Belgium, 13-15 September 2016. The main theme of the book is Anamnesis, Diagnosis, Therapy, Controls, which emphasizes the importance of all steps of a restoration process in order to obtain a thorough understanding of the structural behaviour of built cultural heritage. The contributions cover every aspect of the structural analysis of historical constructions, such as material characterization, structural modelling, static and dynamic monitoring, non-destructive techniques for on-site investigation, seismic behaviour, rehabilitation, traditional and innovative repair techniques and case studies. A special focus has been put on six specific themes: Innovation and heritage, Preventive conservation, Computational strategies for heritage structures, Sustainable strengthening of masonry with composites, Values and sustainability, and Subsoil interaction. The knowledge, insights and ideas in Structural Analysis of Historical Constructions
