Jefferson,2012-11-05 Poverty is a pressing and persistent problem While its extent varies across countries its presence always represents the diminution of human capacity Therefore it seems natural to want to do something about it Have countries made progress in mitigating poverty How do we determine who is poor and who is not poor What intuitions or theories guide the design of anti poverty policy Is overall labor market performance the key to keeping the poverty rate low Or does it matter how well connected an individual is to those who know about the availability of jobs Does being an immigrant increase the odds of being poor Are there anti poverty policies that work For whom do they work If I m poor will I have access to health care and housing Am I more likely to be obese polluted upon incarcerated un banked and without assets if I m poor Is poverty too hard a problem for economic analysis These are some of the questions that a distinguished group of scholars have come together to confront in this Handbook The Handbook is written in a highly accessible style that encourages the reader to think critically about poverty Theories are presented in a rigorous but not overly technical way concise and straightforward empirical analyses enlighten key policy issues The volume has six parts Poverty in the 21st Century Labor Market Factors Poverty Policy Poverty Dynamics Dimensions of Poverty and Trends and Issues in Anti Poverty Policy A goal of the Handbook is to stimulate further research on poverty To that end several chapters challenge conventional thinking about poverty and in some cases present specific proposals for the reform of economic and social policy   *Soft Computing Applications* Valentina Emilia Balas,Lakhmi C. forecasting for railway engineering Gives case studies and experimental designs demonstrating real world applications Introduces cutting edge deep learning and reinforcement learning methods Combines the latest thinking from wind engineering and railway engineering Offers a complete solution to wind forecasting in railway engineering for the safety of running trains **Governance Quality, Fiscal Policy, and the Path to a Low-Carbon Future: Perspectives From Developing Economies** Yakubu, Ibrahim Nandom,2023-08-18 Climate change has emerged as one of the most severe global threats in recent years necessitating urgent interventions The Paris Agreement on climate change and the United Nations through the Sustainable Development Goals SDGs have established ingenious targets for mitigating greenhouse gas emissions thus charting a path to a more ecologically friendly energy system Energy accessibility is often restricted in developing economies where conventional energy sources like coal oil and natural gas are still primarily utilized However the inimical effects of traditional energy sources such as fossil fuels on the environment and health and the quest for measures to counteract climate change have sparked a growing interest in renewable energy in these countries Renewable energy can provide several benefits to developing countries including job creation improved energy access and security and reduced reliance on imported fossil fuels The potential for developing countries to contribute significantly to the energy transition drive is obvious Nonetheless they encounter numerous peculiar constraints including restricted access to financing infrastructure deficit and a lack of technical competence that challenge the transition process Also the need for proper oversight and accountability in the energy sector in most developing countries impedes the ability of governments to adopt effective policies to enhance the efficacy of the sector Fundamentally the energy transition in developing markets is a challenging and heterogeneous process that necessitates a multidimensional approach encompassing regulatory policies institutional frameworks and technological integration for a sustainable energy system Governance Quality Fiscal Policy and the Path to a Low Carbon Future Perspectives From Developing Economies provides a comprehensive overview of the role of governance quality and fiscal policy in shaping the path toward more sustainable renewable energy sources Covering several key themes including the relationship between institutional quality and renewable energy adoption emission trading systems green finance climate resilience and climate induced migration among others this premier reference work aims to provide policymakers academics practitioners and students with valuable insights practical recommendations and a deeper understanding of the energy transition landscape in developing economies **Hedge Fund Returns** Christian Alexander Wegener,2011 The present work advances the research on hedge fund returns in three main areas Firstly their statistical properties are assessed in order to understand by what degree the returns of this alternative asset class are subject to non normality autocorrelation and heteroscedasticity Secondly state of the art econometric approaches are used for the purpose of analyzing whether and to what extent monthly hedge fund returns are forecastable Thirdly an effort is made to identify and explain which economic risks affect the performance of the different hedge fund strategy styles in which way The

empirical results suggest that monthly hedge fund returns are forecastable by means of multivariate regression models which rely on economic predictors such as changes in interest rates or changes in business outlooks Accounting for the fact that hedge fund returns are non normally distributed heteroscedastic and time varying in their exposure to pervasive risk factors the devised econometric models are found to deliver significant out of sample predictive power The thesis at hand also documents that the interdependencies between the monthly changes of envisaged risk factors and the subsequent hedge fund returns remain remarkably stable throughout time In essence the performance of hedge funds appears to be sensitive to common business cycle movements Altogether the results are relevant to researchers in search of a description and application of contemporary return prediction methods as well as to investors in need of a better understanding of the drivers of hedge fund returns **Artificial Intelligence and Soft Computing** Leszek Rutkowski,Marcin Korytkowski,Rafał Scherer,Ryszard Tadeusiewicz,Lotfi A. Zadeh,Jacek M. Zurada,2017-06-01 The two volume set LNAI 10245 and LNAI 10246 constitutes the refereed proceedings of the 16th International Conference on Artificial Intelligence and Soft Computing ICAISC 2017 held in Zakopane Poland in June 2017 The 133 revised full papers presented were carefully reviewed and selected from 274 submissions The papers included in the second volume are organized in the following five parts data mining artificial intelligence in modeling simulation and control various problems of artificial intelligence special session advances in single objective continuous parameter optimization with nature inspired algorithms special session stream data mining Predictive Control in Process Engineering Robert Haber,Ruth Bars,Ulrich Schmitz,2012-09-19 Describing the principles and applications of single input single output and multivariable predictive control in a simple and lively manner this practical book discusses topics such as the handling of on off control nonlinearities and numerical problems It gives guidelines and methods for reducing the computational demand for real time applications With its many examples and several case studies incl injection molding machine and waste water treatment and industrial applications stripping column distillation column furnace this is invaluable reading for students and engineers who would wish to understand and apply predictive control in a wide variety of process engineering application areas Energy Management in Renewable Sources Integrated System Ashwani Kumar,S.
