An aerial photograph of a river, likely the Amazon, showing a complex network of tributaries and a large grid overlay on the right side. The grid is composed of black lines forming squares, with some squares containing smaller, more detailed grid patterns. The river's surface is dark and textured, with white foam from rapids or turbulence visible in some areas.

Stewardship Across Boundaries:

Stewardship Across Boundaries Richard L. Knight, Peter Landres, 2013-06-17 Every piece of land no matter how remote or untrammeled has a boundary. While sometimes boundary lines follow topographic or biological features more often they follow the straight lines of political dictate and compromise. Administrative boundaries nearly always fragment a landscape resulting in loss of species that must disperse or migrate across borders increased likelihood of threats such as alien species or pollutants and disruption of natural processes such as fire. Despite the importance and ubiquity of boundary issues remarkably little has been written on the subject. *Stewardship Across Boundaries* fills that gap in the literature addressing the complex biological and socioeconomic impacts of both public and private land boundaries in the United States. With contributions from natural resource managers, historians, environmentalists, political scientists and legal scholars the book develops a framework for understanding administrative boundaries and their effects on the land and on human behavior; examines issues related to different types of boundaries: wilderness, commodity, recreation, private, public; presents a series of case studies illustrating the efforts of those who have cooperated to promote stewardship across boundaries; synthesizes the broad complexity of boundary related issues and offers an integrated strategy for achieving regional stewardship. *Stewardship Across Boundaries* should spur open discussion among students, scientists, managers and activists on this important topic. It demonstrates how legal, social and ecological conditions interact in causing boundary impacts and why those factors must be integrated to improve land management. It also discusses research needs and will help facilitate critical thinking within the scientific community that could result in new strategies for managing boundaries and their impacts. *A Guidebook for Integrated Ecological Assessments* Mark E. Jensen, Patrick S. Bourgeron, 2001-03-30 A rich set of protocols for the process of assessing the ecological make up of the land so as to guide environmental decision making. Wilderness Science in a Time of Change Conference: Wilderness within the context of larger systems, 2000 **Applying Ecological Principles to Land Management** Virginia H. Dale, Richard A. Haeuber, 2011-06-27 This volume applies ecological principles and guidelines to understand past and current land use and land management and more importantly endeavors to promote more ecologically sound approaches to future land use and management decisions. The volume incorporates case studies from a wide variety of disciplines and perspectives. The case studies explore past and current land use decisions on both public and private lands and include practical approaches and tools for land use decision making. Perhaps the most important feature of the book is the linking of ecological theory and principle with applied land use decision making: the theoretical and empirical are joined through concrete case studies of actual land use decision making processes. In this volume readers will find a statement of fundamental ecological principles that are relevant for land use planning and management coupled with multiple in depth explorations of the application of these principles in action. In addition most case studies describe specific tools and approaches for incorporating endeavors to join fundamental ecological knowledge with cutting edge application in order to

both educate and provide concrete guidance for decision making The intended audience is broad and multidisciplinary from undergraduate and graduate level courses in environmental studies to professional land use planners

Integrating Landscape Ecology Into Natural Resource Management Jianguo Liu, William W. Taylor, 2002-08 The rapidly increasing global population has dramatically increased the demands for natural resources and has caused significant changes in quantity and quality of natural resources To achieve sustainable resource management it is essential to obtain insightful guidance from emerging disciplines such as landscape ecology This text addresses the links between landscape ecology and natural resource management These links are discussed in the context of various landscape types a diverse set of resources and a wide range of management issues A large number of landscape ecology concepts principles and methods are introduced Critical reviews of past management practices and a number of case studies are presented This text provides many guidelines for managing natural resources from a landscape perspective and offers useful suggestions for landscape ecologists to carry out research relevant to natural resource management In addition it will be an ideal supplemental text for graduate and advanced undergraduate ecology courses

The Oxford Handbook of Public Policy Michael Moran, Martin Rein, Robert E. Goodin, 2008-06-13 The Oxford Handbooks of Political Science is a ten volume set of reference books offering authoritative and engaging critical overviews of the state of political science Each volume focuses on a particular part of the discipline with volumes on Public Policy Political Theory Political Economy Contextual Political Analysis Comparative Politics International Relations Law and Politics Political Behavior Political Institutions and Political Methodology The project as a whole is under the General Editorship of Robert E Goodin with each volume being edited by a distinguished international group of specialists in their respective fields The books set out not just to report on the discipline but to shape it The series will be an indispensable point of reference for anyone working in political science and adjacent disciplines Public policy is the business end of political science It is where theory meets practice in the pursuit of the public good Political scientists approach public policy in myriad ways Some approach the policy process descriptively asking how the need for public intervention comes to be perceived a policy response formulated enacted implemented and all too often subverted perverted altered or abandoned Others approach public policy more prescriptively offering politically informed suggestions for how normatively valued goals can and should be pursued either through particular policies or through alternative processes for making policy Some offer their advice from the Olympian heights of detached academic observers others as engaged scholars cum advocates while still others seek to instil more reflective attitudes among policy practitioners themselves toward their own practices The Oxford Handbook of Public Policy mines all these traditions using an innovative structure that responds to the very latest scholarship Its chapters touch upon institutional and historical sources and analytical methods how policy is made how it is evaluated and how it is constrained In these ways the Handbook shows how the combined wisdom of political science as a whole can be brought to bear on political attempts to improve the human condition

Time of Change Conference ,2000 **Stitching the West Back Together** Susan Charnley,Thomas E. Sheridan,Gary P. Nabhan,2014-09-10 As conservationists ranchers and forest workers join together to protect the wide open spaces diverse habitats and working landscapes upon which people plants and animals depend a new vision of management is emerging in which the conservation of biodiversity ecosystem integrity and sustainable resource use are seen not as antithetical but as compatible even symbiotic goals This book explores that expanded inclusive vision of environmentalism as it delves into the history and evolution of Western land use policy and of the working landscapes themselves Getting Results Through Collaboration Myrna Mandell,2001-08-30 Public policy makers and managers in public administration operate under a unique set of circumstances that differ significantly from those in the private sector Collaboration through networks is a feature of both sectors but in the private sector it is often characterized by partnerships and alliances meant to benefit a particular company or industry whereas collaboration through networks in the public sector involve disparate organizations working toward a common goal and not merely to enhance the performance of one among them Therefore much of the work that has been published in the business management literature on collaboration through networks does not apply wholesale without revisions to the public sector Mandell and her contributors fill that gap by bringing together academic and practitioner perspectives into a coherent holistic examination of the operative processes in public sector networks and network structures Networks and network structures by definition imply interactions among many organizations individuals or interest groups The definition is broadened here to include collaborative efforts that take place within different countries as well as those that cross national borders Going beyond the usual emphasis on the opportunities and promises of collaboration through networks Mandell and her contributors take a hard look at such pitfalls and constraints as those involving power conflicts between individual and organizational commitments the dichotomy between the need for flexibility and the need for rules and procedures the difference between the needs and expectations of a national public and a local public and accountability issues that arise from the need to satisfy outside regulators as well as the goals of the network In addition to these unique contributions to the literature on networks and network structures Mandell addresses the important but often overlooked behavioral micro issues e g motivation change and communication that tend to be drowned out by the overriding emphasis in the literature on structural macro issues Reflects the latest thinking in the field and explores up to the minute innovations currently being developed **Ecoregion-Based Design for Sustainability** Robert G. Bailey,2007-05-08 Robert Bailey is an established authority on ecosystems and his previous works Ecosystem Geography and Ecoregions have sold well Fully illustrated with color diagrams and maps Includes a Glossary to define terms which may be unfamiliar to professionals working in this cross disciplinary field Provides a Resource Guide and a Sources and Recommended Reading section to aid readers who require additional information Presents a modified approach to land management and conservation in a non technical and engaging manner **Greater Yellowstone Public Lands** Alice Wondrak Biel,2006 **River Ecology and**

Management Robert Naiman, Robert E. Bilby, 2001-02-16 As the vast expanses of natural forests and the great populations of salmonids are harvested to support a rapidly expanding human population the need to understand streams as ecological systems and to manage them effectively becomes increasingly urgent The unfortunate legacy of such natural resource exploitation is well documented For several decades the Pacific coastal ecoregion of North America has served as a natural laboratory for scientific and managerial advancements in stream ecology and much has been learned about how to better integrate ecological processes and characteristics with a human dominated environment These in sightful but hard learned ecological and social lessons are the subject of this book Integrating land and rivers as interactive components of ecosystems and watersheds has provided the ecological sciences with important theoretical foundations Even though scientific disciplines have begun to integrate land based processes with streams and rivers the institutions and processes charged with managing these systems have not done so successfully As a result many of the watersheds of the Pacific coastal ecoregion no longer support natural settings for environmental processes or the valuable natural resources those processes create An important role for scientists educators and decision makers is to make the integration between ecology and consumptive uses more widely understood as well as useful for effective management **Bioregional Planning** D J

translate into wisdom Whether the immediate challenge is global warming epidemic disease poverty environmental degradation or social fragmentation research efforts are wasted if we cannot devise efficient and understandable processes to create and transfer knowledge to policy makers interested groups and communities How to maximize the impact of scholarly research and combine it with practical knowledge already available in lay communities are key issues in a world threatened with social ecological disasters Making and Moving Knowledge focuses directly on how knowledge is created and transferred or is blocked and atrophies It places knowledge generated by universities and governments beside practical knowledge from coastal aboriginal and non aboriginal communities and looks at how different kinds of knowledge flow in different directions Concentrating on intellectually fertile spaces at the edges of disciplines and the rich socio ecological interfaces where land meets sea authors demonstrate their commitment to knowledge transfer in their work showing how knowledge transfer can be considered theoretically methodologically and practically Drawing the Line Juliet

Fall,2017-11-30 This book provides the first comprehensive and critical examination of the spatial assumptions underpinning transboundary protected areas in Europe at a time of surging global enthusiasm in creating and managing such areas It explores how the reliance on the natural science approach to space within environmental planning has led to a return of exclusionary discourses in paradoxical contrast to the stated claims of designing peace parks The book builds a much needed link between the critical geopolitical literature on boundaries and social approaches to nature and hybridity Drawing the Line is theoretically informed yet grounded in substantial fieldwork from sites in France Germany Italy Poland Romania Slovakia and the Ukraine It uses material from the field to build and question theoretical debates moving beyond site specific issues to wider patterns and trends **Conservation Across Borders** Charles C. Chester,2012-02-13 Conservationists have long

been aware that political boundaries rarely coincide with natural boundaries From the establishment of early peace parks to the designation of continental migratory pathways a wide range of transborder mechanisms to protect biodiversity have been established by conservationists in both the public and private sectors Conservation Across Borders presents a broad overview of the history of transboundary conservation efforts and an accessible introduction to current issues surrounding the subject Through detailed examinations of two initiatives the International Sonoran Desert Alliance ISDA and the Yellowstone to Yukon Initiative Y2Y the book helps readers understand the benefits and challenges of landscape scale protection In addition to discussing general concepts and the specific experience of ISDA and Y2Y the author considers the emerging concept of conservation effectiveness and offers a comparative analysis of the two projects The book ends with a discussion of the complex relationships among civil society governments and international borders By considering the history goals successes and failures of two divergent initiatives the book offers important insights into the field of transborder conservation along with valuable lessons for those studying or working in the field Placing Nature on the Borders of Religion, Philosophy and Ethics Dr Forrest Clingerman,Mr Mark H Dixon,2013-06-28 The natural world has been humanized even areas thought to be

wilderness bear the marks of human impact But this human impact is not simply physical At the emergence of the environmental movement the focus was on human effects on nature More recently however the complexity of the term nature has led to fruitful debates and the recognition of how human individuals and cultures interpret their environments This book furthers the dialogue on religion ethics and the environment by exploring three interrelated concepts to recreate to replace and to restore Through interdisciplinary dialogue the authors illuminate certain unique dimensions at the crossroads between finding value creating value and reflecting on one's place in the world Each of these terms has diverse religious ethical and scientific connotations Each converges on the ways in which humans both think about and act upon their surroundings And each radically questions the damaging conceptual divisions between nature and culture human and environment and scientific explanation and religious ethical understanding This book self consciously reflects on the intersections of environmental philosophy environmental theology and religion and ecology stressing the importance of how place interprets us and how we interpret place In addition to its contribution to environmental philosophy this work is a unique volume in its serious engagement with theology and religious studies on the issues of ecological restoration and the meaning of place

GroundWork for Community-Based Conservation Diane Russell, Camilla Harshbarger, 2003-05-13 While ecological and biophysical sciences have dominated the theory and practice of conservation practitioners and researchers worldwide know that conservation initiatives have profound social impacts and consequences for local communities and cultures This concise and accessible book will give students and practitioners a solid introduction to important methods from ethnography and interviews to surveys and community mapping always attending to the imperatives of local control and community partnerships
