Stimulus Class Formation In Humans And Animals:

Stimulus Class Formation in Humans and Animals T.R. Zentall, P.M. Smeets, 1996-10-24 Stimulus class formation has been studied independently by two groups of researchers. One group has come out of a learning theory approach while the second has developed out of a behavior analytic tradition. The purpose of the present volume is to further establish the ties between these two research areas while allowing for differences in approach to the questions asked. The book is loosely organized around four themes. The first two sections deal with what constitutes functional and equivalence classes in animals and humans. In the third section the authors attempt to identify stimulus control variables that contribute to the formation of equivalence classes. The last section deals with the complex issue of the role of verbal behavior in equivalence classes. The goal of the book is to provide the reader with a better understanding of the current state of research and theory in stimulus class formation. It is also hoped that it will stimulate research into how and under what conditions stimulus classes can form.

Primate Origins of Human Cognition and Behavior Tetsuro Matsuzawa, 2009-03-12 Biologists and anthropologists in Japan have played a crucial role in the development of primatology as a scientific discipline. Publication of *Primate Origins of Human Cognition and Behavior* under the editorship of Tetsuro Matsuzawa reaffirms the pervasive and creative role played by the intellectual descendants of Kinji Imanishi and Junichiro Itani in the fields of behavioral ecology, psychology, and cognitive science. Matsuzawa and his colleagues, humans and other primate partners, explore a broad range of issues including the phylogeny of perception and cognition, the origin of human speech, learning and memory, recognition of self, others, and species, society and social interaction, and culture. With data from field and laboratory studies of more than 90 primate species and of more than 50 years of long term research, the intellectual breadth represented in this volume makes it a major contribution to comparative cognitive science and to current views on the origin of the mind and behavior of humans.

Derived Relational Responding Applications for Learners with Autism and Other Developmental Disabilities

Ruth Anne Rehfeldt, Yvonne Barnes-Holmes, 2009-04-02 By implementing the techniques described in *Derived Relational Responding*, techniques based on a breakthrough new understanding of how humans acquire and use language, clinicians can make significant progress with their clients with autism and other developmental disabilities, limiting the loss of cognitive and social functioning that typically results from these conditions.

Biocommunication of Animals Guenther Witzany, 2013-11-08 Every coordination within or between animals depends on communication processes. Although the signaling molecules, vocal and tactile signs, gestures, and its combinations differ throughout all species according to their evolutionary origins and variety of adaptation processes, certain levels of biocommunication can be found in all animal species. a Abiotic environmental indices such as temperature, light, water, etc. that affect the local ecosphere of an organism and are sensed, interpreted, b Trans-specific communication with non-related organisms, c Species-specific communication between same or related species, d Intraorganismic communication, i.e. sign-mediated coordination within the body of the

organism This book gives an overview of the manifold levels of animal communication exemplified by a variety of species and thereby broadens the understanding of these organisms
