Stimulus Sampling Theory:

A Generalization of Stimulus Sampling Theory Richard C. Atkinson, 1960 *Stimulus sampling theory* E. D. ; Estes Neimark (W. K.), 2023 **Stimulus Sampling Theory** Richard C. Atkinson, William Kaye Estes, 1962 Some of the fundamental mathematical techniques of stimulus sampling theory are presented The simplest of all learning models the pattern model for simple learning is presented in which the population of available stimulation is ASSUMED TO COMPRISE A SET OF DISTINCT STIMULUS PATTERNS EXACTLY ONE OF WHICH IS SAMPLED ON EACH TRIAL In the important special case of the oneelement model it is assumed that there is only one such pattern and that it recurs intact at the beginning of each experimental trial The oneelement model is worthy of study not only for expositional purposes but also for its value as an analytic device in relation to certain types of learning data After a treatment of pattern models for simple acquisition and for learning under probabilistic reinforcement schedules the conceptualization of generalization and transfer is discussed the component models in which the patterns of stimulation effective on individual trials are treated not as distinct elements but as overlapping samples from a common population and finally some examples of the more complex multiple process models which are becoming increasingly important in the analysis of discrimination learning concept formation and related phenomena are discussed Author *Foundations of Stimulus-sampling Theory for Continuous-time Processes* Patrick Suppes, Jean Isaac Donio, 1965 *An Application of Stimulus Sampling Theory to Summated Generalization* Teresa Sosa Carterette, 1959 **Stimulus Sampling Theory [by] E.D. Neimark [and] W.K. Estes** E. D. Neimark, 1967 *Foundations of Stimulus-sampling Theory for Continuous-time Processes* Patrick Suppes, Jean Donio (spécialiste en informatique), 1967 *Test of Stimulus-sampling Theory for a Continuum of Responses with Unimodal Noncontingent Determinate Reinforcement* Patrick Suppes, Raymond W. Frankmann, 1961* *Stimulus Sampling Theory for a Continuum of Responses* Patrick Suppes, 1959 **An application of stimulus sampling theory to latency in a shock escape situation** Henry Meyer Halff, 1969 **Application of Stimulus Sampling Theory to Situations Involving Social Pressure** Patrick Suppes, Franklin Krasne, 1959 **Estes' Stimulus Sampling Theory and Massed Versus Spaced Advertising Schedules** Sanjay Mishra, 2016 Few studies offer a theoretical explanation of the differential effects of massed and spaced advertising Consequently conclusions have been mixed The authors introduce the stimulus sampling model of spacing effects based on Estes mathematical learning theory The model posits that massed repetition generates superior memory at short retention intervals whereas spaced repetition produces superior memory at longer retention intervals Data from various studies are analyzed and implications and potential applications of the model in the advertising context are explored **From Learning Theory to Connectionist Theory** Alice F. Healy, Stephen M. Kosslyn, Richard M. Shiffrin, 2013-04-15 These two volumes consist of chapters written by students and colleagues of W K Estes The books contributors themselves eminent figures in the field reflect on Estes sweeping contributions to mathematical as well as

cognitive and experimental psychology As indicated by their titles Volume I features mathematical and theoretical essays and Volume II presents cognitive and experimental essays Both volumes contain insightful literature reviews as well as descriptions of exciting new theoretical and empirical advances Many of the essays also incorporate personal reminiscences reflecting the authors fond affection for their illustrious mentor Language, Memory, and Thought John R.

Anderson,2013-05-13 Published in 1976 Language Memory and thought is a valuable contribution to the field of Cognitive Psychology This book presents a theory about human cognitive functioning a set of experiments testing that theory and a review of some of the literature relevant to the theory The theory is embodied in a computer simulation model called ACT

From Learning Theory to Connectionist Theory William Kaye Estes,Alice F. Healy,Stephen Michael Kosslyn,Richard M. Shiffrin,1992 STIMULUS SAMPLING PATTERN RECOGNITION. ,1963 A generalized computer model was constructed to simulate the behavior of organisms according to various versions of stimulus sampling theory Results already reported dealt with the learning behavior of rats in a T maze With the addition of new routines to specify the simulated environment of the simulated organism a similar basic program has learned to discriminate among visual patterns consisting of carelessly hand drawn al phabetic characters each of which is presented in a number of variations Input to the program is a binary representation of the presence or absence of parts of the figure in a 20 x 20 matrix superimposed on the figure to be recognized Each cell of the matrix is treated as a separate stimulus having various numbers of elements as sociated with all the responses that can be made A random sample of elements from stimuli present in the visual field is used to determine the response any trial When a correct response is made all elements sampled on that trial become associated with that response Changes in learning rates occur as the probability of selecting available stimulus elements is changed *The Intuitive Sources of Probabilistic Thinking in Children* H. Fischbein,2012-12-06 About a year ago I promised my friend Fischbein a preface to his book of which I knew the French manuscript Now with the printer s proofs under my eyes I like the book even better than I did then because of and influenced by new experiences in the meantime and fresh thoughts that crossed my mind Have I been influenced by what I remembered from the manuscript If so it must have happened unconsciously But of course what struck me in this work a year ago struck a responsive chord in my own mind In the past mathematics teaching theory has strongly been influenced by a view on mathematics as a heap of concepts and on learning mathematics as concepts attainment Mathematics teaching practice has been jeopardised by this theoretical approach which in its most dangerous form expresses itself as a radical atomism To concepts attainment Fischbein opposes acquisition of intuitions In my own publications I avoided the word intuition because of the variety of its meanings across languages For some time I have used the term constitution of mathematical objects which I think means the same as Fischbein s acquisition of intuitions indeed as I view it constituting a mental object precedes its conceptualising and under this viewpoint I tried to observe mathematical activities of young children *Psychology of Learning and Motivation* ,1970-09-30 Psychology of Learning and

Motivation Studies in the Methodology and Foundations of Science Patrick Suppes, 2013-03-09 The twenty three papers collected in this volume represent an important part of my published work up to the date of this volume I have not arranged the paper chronologically but under four main headings Part I contains five papers on methodology concerned with models and measurement in the sciences This part also contains the first paper I published A Set of Independent Axioms for Extensive Quantities in *Portugaliae Mathematica* in 1951 Part II also is concerned with methodology and includes six papers on probability and utility It is not always easy to separate papers on probability and utility from papers on measurement because of the close connection between the two subjects but Articles 6 and 8 even though they have close relations to measurement seem more properly to belong in Part II because they are concerned with substantive questions about probability and utility The last two parts are concerned with the foundations of physics and the foundations of psychology I have used the term foundations rather than philosophy because the papers are mainly concerned with specific axiomatic formulations for particular parts of physics or of psychology and it seems to me that the term foundations more appropriately describes such constructive axiomatic ventures Part III contains four papers on the foundations of physics The first paper deals with foundations of special relativity and the last three with the role of probability in quantum mechanics *Handbook of Learning and Cognitive Processes* W. Estes, 2022-07-30 Is it possible at present to identify a core cluster of theoretical ideas concepts and methods with which everyone working in the area of learning and cognition needs to be familiar Would it be possible to make explicit the relationships that we feel do or must exist among the various subspecialties ranging from conditioning through perceptual learning and memory to psycholinguistics and to present these in a sufficiently organized way to help specialists and non specialists alike in relating particular lines of research to the broader spectrum of activity These questions were posed to a substantial number of investigators who were most active in developing the ideas and doing the research in the early 1970s Originally published between 1975 and 1978 their response constitutes this 6 volume Handbook of Learning and Cognitive Processes The volumes survey the research and theory on learning and cognitive processes that were rapidly developing at the time The primary orientation was to concentrate on research and models aimed toward the development of general cognitive theory They were up to date with regard to theoretical and technical developments and sufficiently self contained to be readable by anyone with a reasonable scientific background regardless of their acquaintance with the technical jargon of particular specialties Previously out of print the Handbook is now available again as a set or as individual volumes
