Temporal Logic Of Programs:

Temporal Logic of Programs Fred Kröger, 2012-12-06 Introduction to the temporal logic of in particular parallel programs Divided into three main parts Presentation of the pure temporal logic language semantics and proof theory Representation of programs and their proper ties within the language of temporal logic Application of the logical apparatus to the verification of program proper ties including a new embedding of Hoare s logic into the temporal framework

Executing Temporal Logic Programs B. C. Moszkowski, 1986-03-06 Temporal logic is gaining recognition as an attractive and versatile formalism for rigorously specifying and reasoning about computer programs digital circuits and message passing systems This book introduces Tempura a programming language based on temporal logic Tempura provides a way of directly executing suitable temporal logic specifications of digital circuits parallel programs and other dynamic systems Since every Tempura statement is also a temporal formula the entire temporal logic formalism can be used as the assertion language and semantics One result is that Tempura has the two seemingly contradictory properties of being a logic programming language and having imperative constructs such as assignment statements The presentation investigates Interval Temporal Logic a formalism with conventional temporal operators such as next and always as well as lesser known ones such as chop This provides the basis for Tempura The design of an interpreter for Tempura is also included as are a variety of sample Tempura programs illustrating how to model both hardware and software *Executing Temporal Logic Programs* Ben Moszkowski, 1985 *Temporal Logic of Programs - Lecture Notes* Technische Universität München.

1995 Time and Logic examines understanding and application of temporal logic presented in computational terms The emphasis in the book is on presenting a broad range of approaches to computational applications The techniques used will also be applicable in many cases to formalisms beyond temporal logic alone and it is hoped that adaptation to many different logics of program will be facilitated Throughout the authors have kept implementation orientated solutions in mind The book begins with an introduction to the basic ideas of temporal logic Successive chapters examine particular aspects of the temporal theoretical computing domain relating their applications to familiar areas of research such as stochastic process theory automata theory established proof systems model checking relational logic and classical predicate logic This is an essential addition to the library of all theoretical computer scientists It is an authoritative work which will meet the needs both of those familiar with the field and newcomers to it Handbook of Philosophical Logic Dov M. Gabbay, Franz Guenther, 2001-12-31 It is with great pleasure that we are presenting to the community the second edition of this extraordinary handbook It has been over 15 years since the publication of the first edition and there have been great changes in the landscape of philosophical logic since then The first edition has proved invaluable to generations of students and researchers in formal philosophy and language as well as to consumers of logic in many applied areas The main logic article in the Encyclopaedia Britannica 1999 has described the first edition as the best starting point for exploring any of the topics in logic We are confident that the second edition will prove to be just as good The first edition was the second handbook published for the logic community It followed the North Holland one volume Handbook of Mathematical Logic published in 1977 edited by the late Jon Barwise The four volume Handbook of Philosophical Logic published 1983 1989 came at a fortunate temporal junction at the evolution of logic This was the time when logic was gaining ground in computer science and artificial intelligence circles These areas were under increasing commercial pressure to provide devices which help and/or replace the human in his daily activity This pressure required the use of logic in the modelling of human activity and organisation on the one hand and to provide the theoretical basis for the computer program constructs on the other

Parallel Programs and Temporal Logic P. Gribomont, 1981 Theories of Programming and Formal Methods Zhiming Liu, Jim Woodcock, Huibiao Zhu, 2013-07-24 This Festschrift volume dedicated to He Jifeng on the occasion of his 70th birthday in September 2013 includes 24 refereed papers by leading researchers current and former colleagues who congratulated at a celebratory symposium held in Shanghai China in the course of the 10th International Colloquium on Theoretical Aspects of Computing ICTAC 2013 The papers cover a broad spectrum of subjects from foundational and theoretical topics to programs and systems issues and to applications comprising formal methods software and systems modeling semantics laws of programming specification and verification as well as logics He Jifeng is known for his seminal work in the theories of programming and formal methods for software engineering He is particularly associated with Unifying Theories of Programming UTP the theory of data refinement and the laws of programming and the rCOS formal

method for object and component system construction His book on UTP with Tony Hoare has been widely read and followed by a large number of researchers and it has been used in many postgraduate courses He was a senior researcher at Oxford during 1984 1998 and then a senior research fellow at the United Nations University International Institute for Software Technology UNU IIST in Macau during 1998 2005 He has been a professor and currently the Dean of the Institute of Software Engineering at East China Normal University Shanghai China In 2005 He Jifeng was elected as an academicien to the Chinese Academy of Sciences He also received an honorary doctorate from the University of York He won a number of prestigious science and technology awards including a 2nd prize of Natural Science Award from the State Council of China a 1st prize of Natural Science Award from the Ministry of Education of China a 1st prize of Technology Innovation from the Ministry of Electronic Industry and a number awards from Shanghai government Description Logic, Theory Combination, and All That Carsten Lutz,Uli Sattler,Cesare Tinelli,Anni-Yasmin Turhan, Frank Wolter,2019-06-25 This Festschrift has been put together on the occasion of Franz Baader s 60th birthday to celebrate his fundamental and highly influential scientific contributions The 30 papers in this volume cover several scientific areas that Franz Baader has been working on during the last three decades including description logics term rewriting and the combination of decision procedures We hope that readers will enjoy the articles gathered in Franz s honour and appreciate the breadth and depth of his favourite areas of computer science **The Language of Time: A Reader** Inderjeet Mani,James Pustejovsky,Robert Gaizauskas,2005-05-27 This reader collects and introduces important work in linguistics computer science artificial intelligence and computational linguistics on the use of linguistic devices in natural languages to situate events in time whether they are past present or future whether they are real or hypothetical when an event might have occurred and how long it could have lasted In focussing on the treatment and retrieval of time based information it seeks to lay the foundation for temporally aware natural language computer processing systems for example those that process documents on the worldwide web to answer questions or produce summaries The development of such systems requires the application of technical knowledge from many different disciplines The book is the first to bring these disciplines together by means of classic and contemporary papers in four areas tense aspect and event structure temporal reasoning the temporal structure of natural language discourse and temporal annotation Clear self contained editorial introductions to each area provide the necessary technical background for the non specialist explaining the underlying connections across disciplines A wide range of students and professionals in academia and industry will value this book as an introduction and guide to a new and vital technology The former include researchers students and teachers of natural language processing linguistics artificial intelligence computational linguistics computer science information retrieval including the growing speciality of question answering library sciences human computer interaction and cognitive science Those in industry include corporate managers and researchers software product developers and engineers in information intensive companies such as on line database and web service providers Towards

Paraconsistent Engineering Seiki Akama, 2016-07-25 This book presents a collection of contributions from related logics to applied paraconsistency Moreover all of them are dedicated to Jair Minoro Abe on the occasion of his sixtieth birthday He is one of the experts in Paraconsistent Engineering who developed the so called annotated logics The book includes important contributions on foundations and applications of paraconsistent logics in connection with engineering mathematical logic philosophical logic computer science physics economics and biology It will be of interest to students and researchers who are working on engineering and logic

Program Development in Computational Logic Maurice Bruynooghe, Kung-Kiu Lau, 2004-06-17 1 The tenth anniversary of the LOPSTR symposium provided the incentive for this volume LOPSTR started in 1991 as a workshop on logic program synthesis and transformation but later it broadened its scope to logic based program development in general that is program development in computational logic and hence the title of this volume The motivating force behind LOPSTR has been the belief that declarative paradigms such as logic programming are better suited to program development tasks than traditional non declarative ones such as the imperative paradigm Specification synthesis transformation or specialization analysis debugging and verification can all be given logical foundations thus providing a unifying framework for the whole development process In the past 10 years or so such a theoretical framework has indeed begun to emerge Even tools have been implemented for analysis verification and specialization However it is fair to say that so far the focus has largely been on programming in the small So the future challenge is to apply or extend these techniques to programming in the large in order to tackle software engineering in the real world Returning to this volume our aim is to present a collection of papers that reflect significant research efforts over the past 10 years These papers cover the whole development process specification synthesis analysis transformation and specialization as well as semantics and systems
