Kurihara,1972-06-30 Part 1 looks at the perspective and prospective transition from macrostatics to macrodynamics Part 2 examines the analytical and operational problems of advanced economies in varying stages of their development and with changing institutional and technological complexes It also discusses boldly such controversial and paradoxical issues as the dichotomy between the post Keynesian and neo classical approach the clash between macroeconomic desiderata the incongruity between internal and external equilibria the contradiction between laissez faire and the policy orientated patterns of development and the contrast between macro and multisectoral models of growth The possibility and desirability of adding to both Keynes s General Theory and post Keynesian dynamics such new dimensions as are attuned to the pressing and mounting needs of our restless society is discussed in both Parts The ideas put forward by Professor Kurihara are intended to stimulate further hypothesis making in the perplexing yet intriguing field of economic development The book should prove useful to serious and curious students of dynamic economics and development planning not only in advanced economies but also in developing countries The Progress of Economics Warren Benjamin Catlin,1962 **The Progressive Assault on Laissez Faire** Barbara H. Fried,2009-07-01 This book examines the first great law and economics movement in the early part of the twentieth century through the work of one of its most original thinkers Robert Hale *A Financial Theory of the Business Cycle* Edward W.

Fuller, Warren Young, 2025-02-17 *A Financial Theory of the Business Cycle* presents a new approach to business cycle theory based on the net present value. The book develops a novel diagrammatic approach to illustrate how fractional reserve banking systematically distorts net present value calculations. In addition to providing fresh insights, the new diagrammatic approach provides a comparative framework that can be used to compare pre-existing theories including those of John Maynard Keynes, Friedrich Hayek, Milton Friedman, and Robert E. Lucas Jr. The net present value is the most important concept in the theory and practice of modern finance. As such, it is the proper framework for explaining the systematic financial losses that occur during the business cycle. Eugen von Böhm-Bawerk and Irving Fisher developed the modern theory of the net present value, and the financial theory of the business cycle developed in this book is rooted in their tradition. Although financial elements played a central role in their respective theories, Keynes and Hayek did not use the net present value. This failure created problems that still haunt business cycle theory today. This book addresses these problems and attempts to steer financial theories of the business cycle back to the course set by Böhm-Bawerk and Fisher. In addition to macroeconomists, this book will appeal to financial economists, money and banking experts, accountants, financial analysts, and businesspeople generally. **Business Organization and the Myth of the Market Economy** William

Lazonick, 1993-05-28 Explains the transitions in twentieth century industrial leadership in terms of changing business investment strategies and organizational structures. **WTO Law and Policy** Jae Sundaram, 2022-04-11 *WTO Law and Policy* presents an authoritative account of the emergence of the World Trade Organization (WTO) and the basic principles and institutional law of the WTO. It explores how political economy has shaped the WTO's legal philosophy and policies and provides insights into how international trade law at the WTO has developed. This textbook examines the legal obligations of the Member States of the WTO under the multilateral trade agreements, the legal remedies available under the rules-based dispute settlement system, and incorporates the most relevant case laws from the WTO's jurisprudence. It outlines several key contemporary issues which the WTO faces as well as areas that need reforming. Each chapter covers a specific topic in relation to the framework and functionality of the WTO with particular focus on the legal aspects of the multilateral trade order. The book is guided by the legal pronouncements of the Dispute Settlement Body Panels and Appellate Body and the commentaries on the interpretation of the provisions of the covered agreements. This book is ideal for all students studying international trade law, including those coming to international law, international trade law, and WTO law for the first time.

It ranges widely through the social sciences and related areas to identify thinkers who have had a major impact on the development of modern social and political theory and given clear accessible summaries of their work. Though understandably preoccupied with the immediate problems of the Great Depression the generation of economists that came to the forefront in the 1930s also looked ahead to the long term consequences of the crisis and proposed various solutions to prevent its recurrence Theodore Rosenof examines the long run theories and legacies of four of the leading members of this generation John Maynard Keynes of Great Britain who influenced the New Deal from afar Alvin Hansen and Gardiner Means who fought over the direction of New Deal policy and Joseph Schumpeter an opponent of the New Deal Rosenof explores the conflicts that arose among long run theorists arguing that such disputes served eventually to set the stage for the emergence and domination of a short run Keynesian approach to economic policy that collapsed under the impact of 1970s stagflation Tracing the subsequent revival of long run theories Rosenof demonstrates their relevance to an understanding of the economy's problems over the past quarter century and to the current debate over public policy
