This volume is a proceedings of a workshop at the Simons Center for Geometry and Physics from May 31 June 4 2022 The workshop highlighted progress in the areas of vertex operator algebras conformal field theory categorification low dimensional topology and representation theory of affine Lie algebras loop groups and quantum groups In the past 40 years string theory gave rise to the mathematical theory of vertex operator algebras which led to the construction of representations of affine Lie algebras and the Moonshine module of the Monster group These mathematical constructions have in turn led to ideas about 3 dimensional quantum gravity In another direction the discovery of the Jones polynomial led to a physical construction of 3 dimensional topological quantum field theories TQFTs which in turn advanced many mathematical developments in quantum groups and low dimensional topology Louis Crane and Igor Frenkel introduced the categorification program with the goal of upgrading 3 dimensional TQFTs coming from representation theory of quantum groups to 4 dimensional TQFTs This idea gave rise to the development of link homologies constructed from representation theoretic algebraic geometric combinatorial and physical structures Articles in this volume present both classical and new results related to these topics They will be interesting to researchers and graduate students working in mathematical aspects of modern quantum field theory

Representation of Lie Groups and Special Functions N.Ja. Vilenkin, A.U. Klimyk, 2012-12-06 This is the first of three major volumes which present a comprehensive treatment of the theory of the main classes of special functions from the point of view of the theory of group representations This volume deals with the properties of classical orthogonal polynomials and special functions which are related to representations of groups of matrices of second order and of groups of triangular matrices of third order This material forms the basis of many results concerning classical special functions such as Bessel MacDonald Hankel Whittaker hypergeometric and confluent hypergeometric functions and different classes of orthogonal polynomials including those having a discrete variable Many new results are given The volume is self contained since an introductory section presents basic required material from algebra topology functional analysis and group theory For research mathematicians physicists and engineers

L-Functions and Automorphic Forms Jan Hendrik Bruinier, Winfried Kohnen, 2018-02-22 This book presents

a collection of carefully refereed research articles and lecture notes stemming from the Conference Automorphic Forms and L Functions held at the University of Heidelberg in 2016 The theory of automorphic forms and their associated L functions is one of the central research areas in modern number theory linking number theory arithmetic geometry representation theory and complex analysis in many profound ways The 19 papers cover a wide range of topics within the scope of the conference including automorphic L functions and their special values p adic modular forms Eisenstein series Borcherds products automorphic periods and many more

Automorphic Representations and L-Functions for the General Linear Group: Volume 1 Dorian Goldfeld, Joseph Hundley, 2011-04-21 This graduate level textbook provides an elementary exposition of the theory of automorphic representations and L functions for the general linear group in an adelic setting Definitions are kept to a minimum and repeated when reintroduced so that the book is accessible from any entry point and with no prior knowledge of representation theory The book includes concrete examples of global and local representations of GL_n and presents their associated L functions In Volume 1 the theory is developed from first principles for GL_1 then carefully extended to GL_2 with complete detailed proofs of key theorems Several proofs are presented for the first time including Jacquet's simple and elegant proof of the tensor product theorem In Volume 2 the higher rank situation of GL_n is given a detailed treatment Containing numerous exercises by Xander Faber this book will motivate students and researchers to begin working in this fertile field of research

Induced Representations of Locally Compact Groups Eberhard Kaniuth, Keith F. Taylor, 2013 A comprehensive presentation of the theories of induced representations and Mackey analysis applied to a wide variety of groups

Symmetry Breaking for Representations of Rank One Orthogonal Groups II Toshiyuki Kobayashi, Birgit Speh, 2018-12-27 This work provides the first classification theory of matrix valued symmetry breaking operators from principal series representations of a reductive group to those of its subgroup The study of symmetry breaking operators intertwining operators for restriction is an important and very active research area in modern representation theory which also interacts with various fields in mathematics and theoretical physics ranging from number theory to differential geometry and quantum mechanics The first author initiated a program of the general study of symmetry breaking operators The present book pursues the program by introducing new ideas and techniques giving a systematic and detailed treatment in the case of orthogonal groups of real rank one which will serve as models for further research in other settings In connection to automorphic forms this work includes a proof for a multiplicity conjecture by Gross and Prasad for tempered principal series representations in the case $SO_{n+1,1}/SO_n$ The authors propose a further multiplicity conjecture for nontempered representations Viewed from differential geometry this seminal work accomplishes the classification of all conformally covariant operators transforming differential forms on a Riemannian manifold X to those on a submanifold in the model space $X \times Y \times S_n \times S_{n-1}$ Functional equations and explicit formulae of these operators are also established This book offers a self contained and inspiring introduction to the analysis of symmetry breaking operators for infinite dimensional

Mathematics Into the Twenty-first Century American Mathematical Society, 1992 In the summer of 1988 in Providence the AMS celebrated its centennial with a wide range of mathematical activities Among those was a symposium Mathematics into the Twenty first Century which brought together a number of the top research mathematicians who will likely have a significant impact on the mathematics of this century This book contains the lectures presented by 16 of the 18 individuals who spoke during the symposium Written by some of the major international figures in mathematical research this group of articles covers a panorama of the vital areas of mathematics at the turn of the 21st century and gives the general mathematical reader a broad perspective on some of the major trends in research

Group Representations, Ergodic Theory, and Mathematical Physics Robert S. Doran, Calvin C. Moore, Robert J. Zimmer, 2008 George Mackey was an extraordinary mathematician of great power and vision His profound contributions to representation theory harmonic analysis ergodic theory and mathematical physics left a rich legacy for researchers that continues today This book is based on lectures presented at an AMS special session held in January 2007 in New Orleans dedicated to his memory The papers written especially for this volume by internationally known mathematicians and mathematical physicists range from expository and historical surveys to original high level research articles The influence of Mackey's fundamental ideas is apparent throughout The introductory article contains recollections from former students friends colleagues and family as well as a biography describing his distinguished career as a mathematician at Harvard where he held the Landon D Clay Professorship of Mathematics

Symmetries in Science Bruno Gruber, 2012-12-06 Southern Illinois University at Carbondale undertook to honor Albert Einstein as scientist and as humanitarian in commemoration of his 100th birthday during an Albert Einstein Centennial Week February 23 March 2 1979 During the course of this week two Symposia were held entitled Symmetries in Science and Einstein Humanities Conscience in addition to cultural and social activities honoring Einstein This volume presents the Symposium Symmetries in Science It reflects the outstanding response that was given to our Albert Einstein Centennial Week by the international community of scientists The motivation to have a celebration honoring Albert Einstein at Southern Illinois University at Carbondale was supplied by Dr Paul A Schilpp the editor of the Library of Living Philosophers Albert Einstein has contributed to this series with his autobiographical notes a kind of autobiography of his scientific life in a volume entitled Einstein Scientist Philosopher the most popular among all the outstanding volumes of this series Dr Paul A Schilpp's presence at Southern Illinois University at Carbondale provided a natural link for an Einstein Celebration as a kind of a continuation of the contribution he made to mankind through the Einstein volume of his Library of Living

Philosophers *Theory and Applications of Special Functions* Mourad E. H. Ismail, Erik Koelink, 2006-03-30 This volume *Theory and Applications of Special Functions* is dedicated to Mizan Rahman in honoring him for the many important contributions to the theory of special functions that he has made over the years and still continues to make Some of the papers were presented at a special session of the American Mathematical Society Annual Meeting in Baltimore Maryland in January 2003 organized by Mourad Ismail Mizan Rahman's contributions are not only contained in his own papers but also indirectly in other papers for which he supplied useful and often essential information We refer to the paper on his mathematics in this volume for more information This paper contains some personal recollections and tries to describe Mizan Rahman's literary writings in his mother tongue Bengali An even more personal paper on Mizan Rahman is the letter by his sons whom we thank for allowing us to reproduce it in this book The theory of special functions is very much an application driven field of mathematics This is a very old field dating back to the 18th century when physicists and mathematicians were looking for solutions of the fundamental differential equations of mathematical physics Since then the field has grown enormously and this book reflects only part of the known applications *Iwahori-Hecke Algebras and their Representation Theory* Ivan Cherednik, Yavor Markov, Roger E. Howe, George Lusztig, 2003-01-01 Two basic problems of representation theory are to classify irreducible representations and decompose representations occurring naturally in some other context Algebras of Iwahori-Hecke type are one of the tools and were probably first considered in the context of representation theory of finite groups of Lie type This volume consists of notes of the courses on Iwahori-Hecke algebras and their representation theory given during the CIME summer school which took place in 1999 in Martina Franca Italy
