**Software Defined Radio** Walter H.W. Tuttlebee, 2003-04-11

Software defined radio SDR is one of the most important topics of research and indeed development in the area of mobile and personal communications SDR is viewed as an enabler of global roaming and as a unique platform for the rapid introduction of new services into existing live networks It therefore promises mobile communication networks a major increase in flexibility and capability SDR brings together two key technologies of the last decade digital radio and downloadable software It encompasses not only reconfiguration of the air interface parameters of handset and basestation products but also the whole mobile network to facilitate the dynamic introduction of new functionality and mass customised applications to the user s terminal post purchase This edited book contributed by internationally respected researchers and industry practitioners describes the current technological status of radio frequency design data conversion reconfigurable signal processing hardware and software issues at all levels of the protocol stack and network The book provides a holistic treatment of SDR addressing the full breadth of relevant technologies radio frequency design signal processing and software at all levels As such it provides a solid grounding for a new generation of wireless engineers for whom radio design in future will assume dynamic flexibility as a given In particular it explores The unique demands of SDR upon the RF subsystem and their implications for front end design methodologies The recent concepts of the digital front end and parametrization The role and key influence of data conversion technologies and devices within software radio essential to robust product design The evolution of signal processing technologies describing new architectural approaches Requirements and options for software download Advances in soft protocols and on the fly software reconfiguration Management of terminal reconfiguration and its network implications The concepts of the waveform description language The book also includes coverage of Potential breakthrough technologies such as superconducting RSFQ technology and the possible future role of MEMS in RF circuitry Competing approaches eg all software radios implemented on commodity computing vs advanced processing architectures that dynamically optimise their configuration to match the algorithm requirements at a point in time The book opens with an introductory chapter by Stephen Blust Chair of the ITU R WP8F Committee and Chair of the SDR Forum presenting a framework for SDR in terms of definitions evolutionary perspectives introductory timescales and regulation Suitable for today s engineers technical staff and researchers within the wireless industry the book will also appeal to marketing and commercial managers who need to understand the basics and potential of the technology for future product development Its balance of industrial and academic contributors also makes it suitable as a text for graduate and post graduate courses aiming to prepare the next generation of wireless engineers

Multimedia Communications Francesco De Natale, Silvano Pupolin, 2012-12-06 Multimedia Communications is at the core of the advanced interactive

services that make up today's Information Society Videoconferencing teleworking teleshopping and video on demand will benefit from developments in broadband and mobile telecommunication systems intelligent multimedia terminals and digital signal processing The latest research findings from these fields are presented here in the proceedings of the 10th Tyrrhenian Workshop on Digital Communications held in Ischia Italy September 19 98 Focus is placed on the following four areas Signal Processing for Multimedia Communications Modeling Analysis and Simulation of Multimedia Traffic Sources Access Techniques Multimode Multimedia Terminals In particular multimedia services and applications are presented This comprehensive collection of papers will enable the reader to keep pace with the rapid changes that are taking place in this field Experts have co-operated with top research centers worldwide on an academic and industrial level to make this an up to date reference volume for all those who are concerned with technological advances in Multimedia Distributed Systems

**Delivering MPEG-4 Based Audio-Visual Services** Hari Kalva, 2005-12-01 Delivering MPEG 4 Based Audio Visual Services investigates the different aspects of end to end multimedia services content creation server and service provider network and the end user terminal Part I provides a comprehensive introduction to digital video communications MPEG standards and technologies and deals with system level issues including standardization and interoperability user interaction and the design of a distributed video server Part II investigates the systems in the context of object based multimedia services and presents a design for an object based audio visual terminal some of these features having been adopted by the MPEG 4 Systems specification The book goes on to study the requirements for a file format to represent object based audio visual content and the design of one such format The design introduces new concepts such as direct streaming that are essential for scalable servers The final part of the book examines the delivery of object based multimedia presentations and gives optimal algorithms for multiplex scheduling of object based audio visual presentations showing that the audio visual object scheduling problem is NP complete in the strong sense The problem of scheduling audio visual objects is similar to the problem of sequencing jobs on a single machine The book compares these problems and adapts job sequencing results to audio visual object scheduling and provides optimal algorithms for scheduling presentations under resource constraints such as bandwidth network constraints and buffer terminal constraints In addition the book presents algorithms that minimize the resources required for scheduling presentations and the auxiliary capacity required to support interactivity in object based audio visual presentations Delivering MPEG 4 Based Audio Visual Services is essential reading for researchers and practitioners in the areas of multimedia systems engineering and multimedia computing network professionals service providers and all scientists and technical managers interested in the most up to date MPEG standards and technologies
