Inventing the Novel R. Bracht Branham, 2019-11-07 *Inventing the Novel* uses the work of the Russian philosopher Mikhail Bakhtin 1895 1975 to explore the ancient origins of the modern novel The analysis focuses on one of the most elusive works of classical antiquity the *Satyricon* written by Nero's courtier Petronius Arbiter whose singular suicide described by Tacitus is as famous as his novel Petronius was the most lauded ancient novelist of the twentieth century and the *Satyricon* served as the original model for F Scott Fitzgerald's *The Great Gatsby* 1925 as well as providing the epigraph for T S Eliot's *The Waste Land* 1922 and the basis for Fellini's *Satyricon* 1969 Bakhtin's work on the novel was deeply informed by his philosophical views if as a phenomenologist he is a philosopher of consciousness as a student of the novel he is a philosopher of the history

of consciousness and it is the role of the novel in this history that held his attention This volume seeks to lay out an argument in four parts that supports Bakhtin's sweeping assertion that the Satyricon plays an immense role in the history of the novel beginning in Chapter 1 with his equally striking claim that the novel originates as a new way of representing time and proceeding to the question of polyphony in Petronius and the ancient novel Maggie O'Farrell Elaine Canning, 2023-12-28 Bringing together cultural analysis and textual readings on critically acclaimed bestseller and winner of the prestigious Women's Prize for Fiction Maggie O'Farrell this collection covers her nine novels her memoir I Am I Am I Am two children's books and features an exclusive interview with the author herself The first full length study of O'Farrell's work this book offers critical explorations from her earliest works to the award winning Hamnet and most recent best selling novel The Marriage Portrait With a timeline of her life and works as well as suggested further reading the themes explored include grief and sacrifice longing and belonging trauma translation palimpsestic texts and the relation of her work to history and the female domestic gothic Protocol-Based Sliding Mode Control Jun Song, Zidong Wang, Yugang Niu, 2022-09-14 This book discusses the Sliding Mode Control SMC problems of networked control systems NCSs under various communication protocols including static dynamic periodic event triggered mechanism and stochastic communication Round Robin weighted try once discard multiple packet transmission and the redundant channel transmission protocol The super twisting algorithm and the extended state observer based SMC scheme are described in this book for suppressing chattering Besides the SMC designs for two dimensional 1 D and two dimensional 2 D NCSs are illustrated as well Features Captures recent advances of theories techniques and applications of networked sliding mode control from an engineering oriented perspective Includes new design ideas and optimization techniques of networked sliding mode control theory Provides advanced tools to apply networked sliding mode control techniques in the practical applications Discusses some new tools to the engineering applications while dealing with the model uncertainties and external disturbances This book aims at Researchers and professionals in Control Systems Computer Networks Internet of Things and Communication Systems *Terminal Event* James Stewart Thayer, 1999 **Viennese Jewish Modernism: Freud, Hofmannsthal, Beer-Hofmann, and Schnitzler**, 2009 **Secure Coordination Control of Networked Robotic Systems** Xiaolei Li, Jiange Wang, Xiaoyuan Luo, Xinping Guan, 2024-03-19 As one of the core equipments and actuators robotic technology has attracted much attention and has made great progress However a single robotic system is often unable to handle complex tasks due to limitations in sensors microprocessors actuators and the ability to handle complex situations With the development of distributed control and microprocessing technology networked robotic systems have greatly expanded their perceptual computational and execution capabilities with high efficiency low cost and strong functionality advantages As a typical distributed cyber physical system DCPS which is an intelligent system that integrates computing communication and control networked robotic systems can perform higher level tasks by sharing information and working together It can provide intelligent control and monitoring of a

physical process such as environment observation information collection and search and rescue etc Thus coordination control of networked robotic systems has become the focus of scholars worldwide However the sensing communication and control integration of networked robotic systems make them face unprecedented network security threats in which cyber attacks have become a major hidden danger to the reliable operation of autonomous unmanned systems Although existing control methods can achieve swarm collaborative control of networked robotic systems the protection of which especially the security of control systems is rarely addressed In this book we conduct research on the secure coordination problem of networked robotic systems from a control theory perspective given the limited communication bandwidth and the increasingly prominent network security threats This book showcases several continuous time and event triggered secure control design and analysis methods for networked robotic systems under different types of cyberattacks Additionally several future research directions are provided for networked robotic systems This book will be an important reference for scientists engineers and graduate students from the field of underwater robotic technologies maritime science and control engineering

Biofictions introduces three novel concepts biofiction bioimagination and biodiscourse to talk about intersections of literary and visual texts and biotechnology The book proposes a new interdisciplinary area of research that correlates processes of genetics and literature based on two critical approaches One drawing parallels between the genetic codes human language formal binary language and posthuman communication and the role of meaning and imagination in these forms of communication Two by defining biofictions as a critical scientific artistic concept and as a corpus of texts that engage ideas and developments in molecular biology Syncretic connection between biotechnology and literature is especially evident in an open science movement and the literary artistic genre of biopunk discussed across chapters The study includes well known contemporary texts such as David Foster Wallace s *Infinite Jest* that are recontextualized as biofiction it offers a rereading of important but neglected novels such as Thomas Disch s *Camp Concentration* 1967 and it analyzes new visual texts such as the TV series *Altered Carbon* and *Ghost in the Shell* films Based on these wide ranging examples and new critical concepts the book argues that coming up with possible alterations for the genetic code or intended traits for the organism is a discursive practice that brings into being bionarratives that are both organic and literary Chapter 1 of this book is freely available as a downloadable Open Access PDF under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license [The Gold Swan](#) James S Thayer,2015-09-15 Thayer paints a rich picture of Hong Kong politics as well as of the world of international architecture Publishers Weekly in this gripping thriller about the world s most famous architect who makes a fatal mistake in building the world s tallest skyscraper for the Chinese government To mark five thousand years of civilization China has commissioned master architect John Llewellyn to construct a building like no other a three thousand foot tall crescent of bronze steel and concrete towering above the Hong Kong skyline Its official name is the Fifth Millennium but the city s citizens have dubbed it the Gold Swan It will be the eighth wonder of the world a testament to China s glory And it may hold a fatal flaw that could bring it crashing to the ground before it is completed Llewellyn s chief security man ex FBI agent Clay Williams and young architect Anne Iverson suspect the impending disaster and they are thrust into the deadly world of Chinese politics where the truth is a lie and lies are the only answers they can find What they cannot know is that there are those in power who want the tower to fall and with it the very heart of one of the most powerful nations on earth
