

GLOSSARY OF TERMS - SURVIVAL MODELS

Prepared by David Forfar, MA, FFA.

Deterministic Approach (where you know exactly how many persons will die at each age)

Life table functions

l_x :- the number of persons alive aged x in a life table. For example, we might have $l_0=100$, $l_1=90$, $l_2=82$, $l_3=75$, etc. which would mean that out of 100 births, 90 persons are alive at exact age 1, 82 alive at exact age 2, 75 alive at exact age 3 etc.

d_x :- the number of persons who die aged x last birthday. In the above example, $d_0=10$, $d_1=8$, $d_2=7$ etc.

p_x :- the probability that a person aged exactly x survives one year to exactly age $(x+1)$ i.e. the probability of surviving one year. Example, $p_0=90/100=.9$, $p_1=82/90=.9111$, $p_2=75/82=.9146$, etc. Hence $p_x = l_{x+1}/l_x$.

q_x :- the probability that a person aged exactly x dies before exact age $(x+1)$, $q_x = (1-p_x)$ i.e. the probability of dying in the next year. Example, $q_0=10/100=.1$, $q_1=8/90=.0889$, $q_2=7/82=.0854$. Hence $q_x = d_x/l_x$.

${}_t p_x$:- the probability that a person aged exactly x lives for another t years to exact age $(x+t)$. Hence ${}_t p_x = l_{x+t}/l_x$.

${}_t q_x$:- the probability that a person aged exactly x dies before exact age $(x+t)$. Hence ${}_t q_x = 1 - {}_t p_x = (l_x - l_{x+t})/l_x$.

${}_m|{}_n q_x$:- the probability that a person aged exactly x dies between exact ages $(x+n)$ and $(x+m+n)$. Hence ${}_m|{}_n q_x = (l_{x+n} - l_{x+m+n})/l_x$. The period m is sometimes referred to as the deferred period.

μ_x , force of mortality :- $\mu_x = -\frac{1}{l_x} \frac{dl_x}{dx}$. Hence μ_x represents the instantaneous rate at which people are dying. If x is fixed and t is the variable then $\mu_{x+t} = -\frac{1}{l_{x+t}} \frac{dl_{x+t}}{dt}$. By integration of this equation it can

be seen that $l_{x+t} = l_x e^{-\int_{s=0}^{s=t} \mu_{x+s} ds}$ and therefore that ${}_t p_x = e^{-\int_{s=0}^{s=t} \mu_{x+s} ds}$

Assumption of uniform of distribution of deaths between exact ages x and $(x+1)$:- The d_x deaths between ages x and $(x+1)$ are assumed uniformly spread across the year of age. Hence $l_{x+t} = l_x - t d_x$ for $0 \leq t \leq 1$.

Assumption of constant force of mortality between exact ages x and $(x+1)$:- The force of mortality between ages x and $(x+1)$ is assumed constant (μ_x , say). Hence, $l_{x+t} = l_x e^{-\mu_x t}$ for $0 \leq t \leq 1$.

Where are the Dead? Peter Moore, 2016-09-13 Where are the dead What are they doing What kind of a process is dying What relationships exist among the dead themselves and between the dead and those in the world they have left behind Modern philosophers argue that the idea of disembodied survival to which many believers pay lip service is incoherent and that there can be evidence neither for nor against something incoherent By contrast this book argues the idea of an embodied survival albeit a form of embodiment differing from our present embodiment makes perfect sense in itself and fits much better with the alleged evidence for post mortem survival Exploring post mortem survival Where are the Dead uses a variety of empirical data alongside mythological legendary and purely fictional material to illustrate how the less familiar idea of embodied post mortem survival might actually work in some real afterlife environment By asking questions about the nature and whereabouts of the afterlife and about what it might be like to be dead the book explores themes nowadays relatively neglected even in disciplines explicitly concerned with ideas about death dying and life after death *Data Analytics Applications in Gaming and Entertainment* Günter Wallner, 2019-07-11 The last decade has witnessed the rise of big data in game development as the increasing proliferation of Internet enabled gaming devices has made it easier than ever before to collect large amounts of player related data At the same time the emergence of new business models and the diversification of the player base have exposed a broader potential audience which attaches great importance to being able to tailor game experiences to a wide range of preferences and skill levels This in turn has led to a growing interest in data mining techniques as they offer new opportunities for deriving actionable insights to inform game design to ensure customer satisfaction to maximize revenues and to drive technical innovation By now data mining and analytics have become vital components of game development The amount of work being done in this area nowadays makes this an ideal time to put together a book on this subject *Data Analytics Applications in Gaming and Entertainment* seeks to provide a cross section of current data analytics applications in game production It is intended as a companion for practitioners academic researchers and students seeking knowledge on the latest practices in game data mining The chapters have been chosen in such a way as to cover a wide range of topics and to provide readers with a glimpse at the variety of applications of data mining in gaming A total of 25 authors from industry and academia have contributed 12 chapters covering topics such as player profiling approaches for analyzing player communities and their social structures matchmaking churn prediction and customer lifetime value estimation communication of analytical results and visual approaches to game analytics This book's perspectives and concepts will spark heightened interest in game analytics and foment innovative ideas that will advance the exciting field of online gaming and entertainment **Harmsworth History of the World: America. The triumph of the mind of man. Complete indexes** Arthur Mee, 1909 Renal Cell Carcinoma Ronald M. Bukowski, Andrew Novick, 2000-04-10 Renal cell carcinoma represents a heterogeneous group of tumors the most common of which is clear cell adenocarcinoma The annual incidence of this tumor appears to be rising and approximately 12 000 individuals die from this

cancer annually in the United States One third of patients who present have metastatic disease at the time of diagnosis and another 40% who undergo nephrectomy will ultimately develop this complication Over the past 10 years a significant amount of new information concerning the epidemiology molecular and immunologic characteristics and therapy for patients with these tumors has appeared The recognition that inherited forms of renal cancer exist and that chromosomal abnormalities can be identified in these tumors suggested a genetic basis for renal cell carcinoma The familial cancer syndrome Von Hippel Lindau disease provided the setting in which the genetic abnormalities associated with the development of renal cancer were first described Abnormalities of the VHL gene have also been detected in sporadic clear cell carcinoma and it has now been recognized that approximately 80 % of these tumors will demonstrate characteristic alterations Currently the functions of the VHL protein are being investigated and the biology of clear cell carcinoma of the kidney is under study Additionally papillary carcinomas of the kidney appear to express different molecular defects and these are now being unraveled

Bladder

Tumors: Vinata B. Lokeshwar, Axel S. Merseburger, Stefan H. Hautmann, 2010-12-16 Bladder cancer is a common cancer of the urinary tract It is the fourth leading cause of cancer related death among men and the seventh among women Clinical management of bladder cancer is challenging because of the heterogeneity among bladder tumors with respect to invasion and metastasis frequent occurrence of new tumors in the bladder among patients treated with bladder preservation treatments and poor prognosis of patients with tumors that invade the bladder muscle and beyond Due to these factors it has been said that the cost per patient of bladder cancer from diagnosis to death is the highest of all cancers In addition to it being a significant health problem bladder cancer is an interesting cancer to study in many ways than one For example Environmental factors such as cigarette smoking and other carcinogens play a major role in the development of transitional carcinoma of the bladder whereas schistosomiasis a protozoan infection results in squamous cell carcinoma of the bladder Different molecular pathways with distinct molecular signatures appear to be involved in the development of low grade versus high grade bladder tumors Currently being monitored by an invasive endoscopic procedure cystectomy with urine cytology as an adjunct bladder cancer is at the forefront of developing cancer biomarkers for non invasive detection Due to the differences in the invasive and metastatic potential of bladder tumors treatment options differ depending upon tumor grade and stage New advances are being made in treatment options to improve the outcome and quality of life for patients with bladder cancer Similarly new molecular nomograms are being discovered to predict treatment outcome so that individualized treatment options can be offered to patients

Neuro-Philosophy and the Healthy Mind: Learning from the Unwell Brain Georg Northoff, 2016-01-11 Applying insights from neuroscience to philosophical questions about the self consciousness and the healthy mind Can we see or find consciousness in the brain How can we create working definitions of consciousness and subjectivity informed by what contemporary research and technology have taught us about how the brain works How do neuronal processes in the brain relate to our experience of a personal identity Where does the brain end and

the mind begin To explore these and other questions esteemed philosopher and neuroscientist Georg Northoff turns to examples of unhealthy minds By investigating consciousness through its absence in people in vegetative states for example we can develop a model for understanding its presence in an active healthy person By examining instances of distorted self recognition in people with psychiatric disorders like schizophrenia we can begin to understand how the experience of self is established in a stable brain Taking an integrative approach to understanding the self consciousness and what it means to be mentally healthy this book brings insights from neuroscience to bear on philosophical questions Readers will find a science grounded examination of the human condition with far reaching implications for psychology medicine our daily lives and beyond
