*Far Beyond the Moon* David P. D. Munns, Karin Nickelsen, 2021-06-01 From the beginning of the space age scientists and engineers have worked on systems to help humans survive for the astounding 28 500 days 78 years needed to reach another planet They've imagined and tried to create a little

piece of Earth in a bubble travelling through space inside of which people could live for decades centuries or even millennia Far Beyond the Moon tells the dramatic story of engineering efforts by astronauts and scientists to create artificial habitats for humans in orbiting space stations as well as on journeys to Mars and beyond Along the way David P D Munns and K rin Nickelsen explore the often unglamorous but very real problem posed by long term life support How can we recycle biological wastes to create air water and even food in meticulously controlled artificial environments Together they draw attention to the unsung participants of the space program the sanitary engineers nutritionists plant physiologists bacteriologists and algologists who created and tested artificial environments for space based on chemical technologies of life support as well as the bioregenerative algae systems developed to reuse waste water and nutrients so that we might cope with a space journey of not just a few days but months or more likely years
