Cios, Witold Pedrycz, Roman W. Swiniarski, Lukasz Andrzej Kurgan, 2007-10-05 If you torture the data long enough Nature will confess said 1991 Nobel winning economist Ronald Coase The statement is still true However achieving this lofty goal is not easy First long enough may in practice be too long in many applications and thus unacceptable Second to get confession from large data sets one needs to use state of the art torturing tools Third Nature is very stubborn not yielding easily or unwilling to reveal its secrets at all Fortunately while being aware of the above facts the reader a data miner will find several efficient data mining tools described in this excellent book The book discusses various issues connecting the whole spectrum of approaches methods techniques and algorithms falling under the umbrella of data mining It starts with data understanding and preprocessing then goes through a set of methods for supervised and unsupervised learning and concludes with model assessment data security and privacy issues It is this specific approach of using the knowledge discovery process that makes this book a rare one indeed and thus an indispensable addition to many other books on data mining To be more precise this is a book on knowledge discovery from data As for the data sets the easy to make statement is that there is no part of modern human activity left untouched by both the need and the desire to collect data The consequence of such a state of affairs is obvious **Data Mining** Charu C. Aggarwal, 2015-04-13 This textbook explores the different aspects of data mining from the fundamentals to the complex data types and their applications capturing the wide diversity of problem domains for data mining issues It goes beyond the traditional focus on data mining problems to introduce advanced data types such as text time series discrete sequences spatial data graph data and social networks Until now no single book has addressed all these topics in a comprehensive and integrated way The chapters of this book fall into one of three categories Fundamental chapters Data mining has four main problems which correspond to clustering classification association pattern mining and outlier analysis These chapters comprehensively discuss a wide variety of methods for these problems Domain chapters These chapters discuss the specific methods used for different domains of data such as text data time series data sequence data graph data and spatial data Application chapters These chapters study important applications such as stream mining Web mining ranking recommendations social networks and privacy preservation The domain chapters also have an applied flavor Appropriate for both introductory and advanced data mining courses Data Mining The Textbook balances mathematical details and intuition It contains the necessary mathematical details for professors and researchers but it is presented in a simple and intuitive style to improve accessibility for students and industrial practitioners including those with a limited mathematical background Numerous illustrations examples and exercises are included with an emphasis on semantically interpretable examples Praise for Data Mining The Textbook As I read through this book I have already decided to use it in my classes This is a book written by an outstanding researcher who
