Peterson,International Cartographic Association,2005-12-17 This book examines a new trend affecting cartography and geographic information science Presenting the work of over 30 authors from 16 different countries the book provides an overview of current research in the new area of Internet Cartography Chapters deal with the growth of this form of map distribution uses in education privacy issues and technical aspects from the point of view of the map provider including Internet protocols such as XML and SVG Many see the Internet as a revolution for cartography Previously tied to the medium of paper and expensive large format color print technology maps had a limited distribution and use The Internet made it possible to not only distribute maps to a much larger audience but also to incorporate interaction and animation in the display Maps have also become timelier with some maps of traffic and weather being updated every few minutes In addition it is now possible to access maps from servers throughout the world Finally the Internet has made historic maps available for viewing to the public that were previously only available in map libraries with limited access Provides comprehensive coverage of maps and the internet Delivers a global perspective Combines theoretical and practical aspects **China and the Internet** Song Shi,2023-12-15 Two oversimplified narratives have long dominated news reports and academic studies of China s Internet one lauding its potentials to boost commerce the other bemoaning state control and measures against the forces of political transformations This bifurcation obscures the complexity of the dynamic forces operating on the Chinese Internet and the diversity of Internet related phenomena China and the Internet analyzes how Chinese activists NGOs and government offices have used the Internet to fight rural malnutrition the digital divide the COVID 19 pandemic and other urgent problems affecting millions of people It presents five theoretically informed case studies of how new media have been used in interventions for development and social change including how activists

battled against COVID 19 In addition this book applies a Communication for Development approach to examine the use and impact of China s Internet Although it is widely used internationally in Internet studies Communication for Development has not been rigorously applied in studies of China s Internet This approach offers a new perspective to examine the Internet and related phenomena in Chinese society

An Internet in Your Head Daniel Graham,2021-05-04 Whether we realize it or not we think of our brains as computers In neuroscience the metaphor of the brain as a computer has defined the field for much of the modern era But as neuroscientists increasingly reevaluate their assumptions about how brains work we need a new metaphor to help us ask better questions The computational neuroscientist Daniel Graham offers an innovative paradigm for understanding the brain He argues that the brain is not like a single computer it is a communication system like the internet Both are networks whose power comes from their flexibility and reliability The brain and the internet both must route signals throughout their systems requiring protocols to direct messages from just about any point to any other But we do not yet understand how the brain manages the dynamic flow of information across its entire network The internet metaphor can help neuroscience unravel the brain s routing mechanisms by focusing attention on shared design principles and communication strategies that emerge from parallel challenges Highlighting similarities between brain connectivity and the architecture of the internet can open new avenues of research and help unlock the brain s deepest secrets **An Internet in Your Head** presents a clear eyed and engaging tour of brain science as it stands today and where the new paradigm might take it next It offers anyone with an interest in brains a transformative new way to conceptualize what goes on inside our heads

Adolescents In The Internet Age, 2nd Edition Paris S. Strom,Robert D. Strom,2014-07-01 Teaching adolescents and learning from them is the paradigm elaborated throughout this second edition of Adolescents in the Internet Age The premise is based upon four assumptions 1 Adolescents have unique experiences that

qualify them as the most credible source on what growing up is like in the current environment 2 Adolescents are more competent than many adults with tools of technology that will be needed for learning in the future 3 Adolescents and adults can support mutual development by adopting the concept of reciprocal learning and 4 The common quest of adolescents to gain adult identity could be attained before employment Expectations are the theme for every chapter The reason expectations are so important is because they influence goals determine priorities and are used to evaluate progress and achievements of individuals and institutions When teacher expectations correspond with the abilities and interests of students achievement and satisfaction are common outcomes In contrast if teachers expect too little student potential can be undermined There is also concern if expectations that students have for themselves surpass their abilities This occurs if teachers do not inform students about their deficits Multitasking doing too many things at the same time detracts from productivity Sharing accountability depends upon complimentary and attainable expectations that can be met by students teachers and parents To support appropriate expectations this book for secondary teachers and high school students seeking a broader understanding of their own generation is organized in four parts about aspects of learning and development 1 Identity expectations introduce traditional perspectives on adolescence changes related to sources of learning evolving emphasis of schools and ways to support motivation goal setting and formation of identity 2 Cognitive expectations examine mental abilities academic standards emergence of the Internet as a learning tool development of media literacy creative problem solving and encouragement of higher order thinking skills 3 Social expectations explore the need for giving greater attention to social development importance of teamwork skills involvement with social networking adoption of civil behavior school safety and values as a basis for ethical behavior and character 4 Health expectations center on decisions that influence physical health well being and lifestyle choice Consideration is given to stress management emotional intelligence and risk assessment strategies for individual teenagers and the schools that they attend *Internet Multimedia*
