The Island Chumash Behavioral Ecology Of A Maritime Society:

The Island Chumash Douglas J. Kennett, 2005-04-04 Kennett explores trends in demography dietary expansion economic intensification and increasing sociopolitical sophistication evident in the archaeological record By combining empirical findings based on new archaeological and paleoclimatic work and a thorough synthesis of earlier studies Kennett argues that the social and political complexity evident among the island Chumash historically was ultimately a product of individual responses to demographic expansion human impact on marine habitats and periods of rapid climatic change BOOK JACKET Human Behavioral Ecology and Coastal Environments Heather B. Thakar, Carola Flores Fernandez, 2023-02-14 In this volume contributors apply human behavioral ecology theoretical models to coastal environments around the globe and to the use of coastal resources by past human societies showing how researchers can gain insights about human behavior in these settings **An Archaeology of Abundance** Kristina M. Gill, Mikael Fauvelle, Jon M. Earlandson, 2019-01-23 This volume focuses on the archaeology and historical ecology of a series of islands located off the Pacific Coast of Alta and Baja California from the Channel Islands to Cedros Island *Human Behavioral Ecology* Jeremy Koster, Brooke Scelza, Mary K. Shenk, 2024-03-14 Human behavioral ecology HBE applies the principles of evolutionary theory and optimisation to the study of human behavioural and cultural diversity Among other things HBE attempts to explain variation in behaviour as adaptive solutions to the competing life history demands of growth development reproduction parental care and mate acquisition This book is a comprehensive introduction to the theoretical orientation and specific findings of HBE It consolidates the insights of evolution and human behaviour into a single volume that reflects the current state and future of the field It brings together leading scholars from across the evolutionary social sciences to provide a comprehensive and thought provoking review of the state of the topic Throughout the authors explain the latest developments in theory and highlight critical debates in the literature while also engaging readers with ethnographic insights and field based studies that remain at the core of human behavioral ecology **Restoring Nature** Lary M. Dilsaver, Timothy J. Babalis, 2023 Off the coast of California running from Santa Barbara to La Jolla lies an archipelago of eight islands known as the California Channel Islands The northern five were designated as Channel Islands National Park in 1980 to protect and restore the rich habitat of the islands and surrounding waters In the years since that mission intensified as scientists discovered the extent of damage to the delicate habitats of these small fragments of land and to the surprisingly threatened sea around them In *Restoring Nature* Lary M Dilsaver and Timothy J Babalis examine how the National Park Service has attempted to reestablish native wildlife and vegetation to the five islands through restorative ecology and public land management The Channel Islands staff were innovators of the inventory and monitoring program whereby the resource problems were exposed This program became a blueprint for management throughout the U S park system Dilsaver and Babalis present an innovative regional and environmental history of a little known corner of the Pacific West as well as a larger national narrative about how the Park Service developed its

approach to restoration ecology which became a template for broader Park Service policies that shaped the next generation of environmental conservation *Trekking the Shore* Nuno F. Bicho, Jonathan A. Haws, Loren G. Davis, 2011-05-19 Human settlement has often centered around coastal areas and waterways Until recently however archaeologists believed that marine economies did not develop until the end of the Pleistocene when the archaeological record begins to have evidence of marine life as part of the human diet This has long been interpreted as a postglacial adaptation due to the rise in sea level and subsequent decrease in terrestrial resources Coastal resources particularly mollusks were viewed as fallback resources which people resorted to only when terrestrial resources were scarce included only as part of a more complex diet Recent research has significantly altered this understanding known as the Broad Spectrum Revolution BSR model The contributions to this volume revise the BSR model with evidence that coastal resources were an important part of human economies and subsistence much earlier than previously thought and even the main focus of diets for some Pleistocene and early Holocene hunter gatherer societies With evidence from North and South America Europe Africa Asia and Australia this volume comprehensively lends a new understanding to coastal settlement from the Middle Paleolithic to the Middle Holocene

Rick, 2011-03-23 For more than ten thousand years Native Americans from Alaska to southern California relied on aquatic animals such as seals sea lions and sea otters for food and raw materials Archaeological research on the interactions between people and these

marine mammals has made great advances recently and provides a unique lens for understanding the human and ecological past Archaeological research is also emerging as a crucial source of information on contemporary environmental issues as we improve our understanding of the ancient abundance ecology and natural history of these species This groundbreaking interdisciplinary volume brings together archaeologists biologists and other scientists to consider how archaeology can inform the conservation and management of pinnipeds and other marine mammals along the Pacific Coast **The**

Archaeology of Human-Environment Interactions Daniel Contreras, 2016-08-25 The impacts of climate change on human societies and the roles those societies themselves play in altering their environments appear in headlines more and more as concern over modern global climate change intensifies Increasingly archaeologists and paleoenvironmental scientists are looking to evidence from the human past to shed light on the processes which link environmental and cultural change Establishing clear contemporaneity and correlation and then moving beyond correlation to causation remains as much a theoretical task as a methodological one This book addresses this challenge by exploring new approaches to human environment dynamics and confronting the key task of constructing arguments that can link the two in concrete and detailed ways The contributors include researchers working in a wide variety of regions and time periods including Mesoamerica Mongolia East Africa the Amazon Basin and the Island Pacific among others Using methodological vignettes from their own research the contributors explore diverse approaches to human environment dynamics illustrating the manifold nature of the subject and suggesting a wide variety of strategies for approaching it This book will be of interest to researchers and scholars in Archaeology Paleoenvironmental Science Ecology and Geology **A Companion to American Environmental**

Multispecies Archaeology Suzanne E. Pilaar Birch, 2018-02-07 *Multispecies Archaeology* explores the issue of ecological and cultural novelty in the archaeological record from a multispecies perspective Human exceptionalism and our place in nature have long been topics of academic consideration and archaeology has been synonymous with an exclusively human past to the detriment of gaining a more nuanced understanding of one that is shared Encompassing more than just our relationships with animals the book considers what we can learn about the human past without humans as the focus of the question The volume digs deep into our understanding of interaction with plants fungi microbes and even the fundamental building blocks of life DNA *Multispecies Archaeology* examines what it means to be human and non human from a variety of perspectives providing a new lens through which to view the past Challenging not only the subject or object of archaeology but also broader disciplinary identities the volume is a landmark in this new and evolving area of scholarly interest *The Cultural Dynamics of Shell-Matrix Sites* Mirjana Roksandic, Sheila Mendonça de Souza, Sabine Eggers, Meghan Burchell, Daniela Klokler, 2014-07 The contributors to this book introduce new ways to study shell matrix sites ranging from the geochemical analysis of shellfish to the interpretation of human remains buried within Drawing upon examples from around the world this is one of the only books to offer a global perspective on the archaeology of shell matrix sites

Socialising Complexity Sheila Kohring, Stephanie Wynne-Jones, 2007-11-30 *Socialising Complexity* introduces the concept of complexity as a tool rather than a category for understanding social formations This new take on complexity moves beyond the traditional concern with what constitutes a complex society and focuses on the complexity inherent in various social forms through the structuring principles created within each society The aims and themes of the book can thus be summarized as follows to introduce the idea of complexity as a tool which is pertinent to the understanding of all types of society rather than an exclusionary type of society in its own right to examine concepts that can enhance our interpretation of societal complexity such as heterarchy materialization and contextualization These concepts are applied at different scales and in different ways illustrating their utility in a variety of different cases to reestablish social structure as a topic of study within archaeology which can be profitably studied by proponents of both processual and post processual methodologies

Bodies and Lives in Ancient America Debra L. Martin, Anna J. Osterholtz, 2015-10-30 *Bodies and Lives in Ancient America* offers a broad overview of what it was like to live and die throughout North America before European contact Using a unique life history approach the book moves from pregnancy and birth through to senescence Drawing on biological data gathered from human remains as well as cultural and environmental data derived from archaeological investigations the authors provide students with a wealth of information on health and other aspects of life that leave changes on the skeletal system Rich case studies throughout demonstrate the temporal cultural and environmental variability across the continent

prior to colonial times The authors also examine how different groups faced a variety of challenges in their lives including climate change and violence and the effects this had on their health The book concludes by considering the relevance of what ancient bones reveal for people today Written in an engaging style with complex paleopathology data synthesized and clearly presented *Bodies and Lives in Ancient America* is an accessible introduction to the state of health across prehistoric North America

Contemporary Issues in California Archaeology Terry L Jones, Jennifer E Perry, 2016-06-16 Recent archaeological research on California includes a greater diversity of models and approaches to the region's past as older literature on the subject struggles to stay relevant This comprehensive volume offers an in depth look at the most recent theoretical and empirical developments in the field including key controversies relevant to the Golden State coastal colonization impacts of comets and drought cycles systems of power Polynesian contacts and the role of indigenous peoples in the research process among others With a specific emphasis on those aspects of California's past that resonate with the state's modern cultural identity the editors and contributors all leading figures in California archaeology seek a new understanding of the myth and mystique of the Golden State

Climatic and Ecological Change in the Americas James Andrew Whitaker, Chelsey Geralda Armstrong, Guillaume Odonne, 2023-08-17 This book offers a comparative analysis of the experiences responses and adaptations of people to climate variability and environmental change across the Americas It foregrounds historical ecology as a structural framework for understanding the climate change crisis throughout the region and throughout time In recent years Indigenous and local populations in particular have experienced climate change effects such as altered weather patterns seasonal irregularities flooding and drought and difficulties relating to subsistence practices Understanding and dealing with these challenges has drawn on peoples longstanding experience with climate variability and in some cases includes models of mitigation and responses that are millennia old With contributions from specialists across the Americas this volume will be of interest to scholars from fields including anthropology archaeology geography environmental studies and Indigenous studies

Global Perspectives on Long Term Community Resource Management Ludomir R. Lozny, Thomas H. McGovern, 2019-06-21 Communal level resource management successes and failures comprise complex interactions that involve local regional and increasingly global scale political economic and environmental changes shown to have recurring patterns and trajectories The human past provides examples of long term millennial and century scale successes followed by undesired transitions collapse and rapid failure of collaborative management cooperation on the decadal scale Management of scarce resources and common properties presents a critical challenge for planners attempting to avoid the tragedy of the commons in this century Here anthropologists human ecologists archaeologists and environmental scientists discuss strategies for social well being in the context of diminishing resources and increasing competition The contributors in this volume revisit tragedy of the commons also referred to as drama or comedy of the commons and examine new data and theories to mitigate pressures and devise models for sustainable communal welfare and development They

present twelve archaeological historic and ethnographic cases of user managed resources to demonstrate that very basic community level participatory governance can be a successful strategy to manage short term risk and benefits The book connects past present future by presenting geographically and chronologically spaced out examples of communal level governance strategies and overviews of the current cutting edge research The lesson we learn from studying past responses to various ecological stresses is that we must not wait for a disaster to happen to react but must react to mitigate conditions for emerging disasters

Shell Money Mikael Fauvelle, 2024-03-13 Where when and under what circumstances did money first emerge This Element examines this question through a comparative study of the use of shells to facilitate trade and exchange in ancient societies around the world It argues that shell money was a form of social technology that expanded political economic capacities by enabling long distance trade across boundaries and between strangers The Element examines several cases in which shells and shell beads permeated throughout daily life and became central to the economic functioning of the societies that used them In several of these cases it argues that shells were used in ways that meet all the standard definitions of modern money By examining the wide range of uses of shell money in ancient economic systems around the world this Element explores the diversity of forms that money has taken throughout human history This title is also available as Open Access on Cambridge Core
