endeavoured to subject the phenomena of nature to the laws of mathematics I have in this treatise cultivated mathematics so far as it regards philosophy The ancients considered mechanics in a twofold respect as rational which proceeds accurately by demonstration and practical To practical mechanics all the manual arts belong from which mechanics took its name But as artificers do not work with perfect accuracy it comes to pass that mechanics is so distinguished from geometry that what is perfectly accurate is called geometrical what is less so is called mechanical But the errors are not in the art but in the artificers He that works with less accuracy is an imperfect mechanic and if any could work with perfect accuracy he would be the most perfect mechanic of all for the description of right lines and circles upon which geometry is founded belongs to mechanics Geometry does not teach us to draw these lines but requires them to be drawn for it requires that the learner should first be taught to describe these accurately before he enters upon geometry then it shows how by these operations problems may be solved To describe right lines and circles are problems but not geometrical problems Copy of original is presented as is No claim can be made as to accuracy

Sir Isaac Newton's Mathematical Principles of Natural Philosophy and His System of the World Isaac Newton, 1687-01-01 I consider philosophy rather than arts and write not concerning manual but natural powers and consider chiefly those things which relate to gravity levity elastic force the resistance of fluids and the like forces whether attractive or impulsive and therefore I offer this work as the mathematical principles of philosophy In the third book I give an example of this in the explication of the System of the World I derive from celestial phenomena the forces of gravity with which bodies tend to the sun and other planets
